MOTOMAN-MH6/MH6F OPTIONS INSTRUCTIONS

FOR ZEROING FUNCTION

TYPE:
YR-MH00006-B** (ZEROING (OPTION): DX100)
YR-MH00006-D** (DRIP-PROOF + ZEROING (OPTION): DX100)
YR-MH00006F-B** (ZEROING (OPTION): FS100)
YR-MH00006F-D** (DRIP-PROOF + ZEROING (OPTION): FS100)

Upon receipt of the product and prior to initial operation, read these instructions thoroughly, and retain for future reference.

MOTOMAN INSTRUCTIONS
MOTOMAN-MH6/MH6F INSTRUCTIONS
DX100 INSTRUCTIONS
DX100 OPERATOR'S MANUAL
DX100 MAINTENANCE MANUAL
FS100 INSTRUCTIONS
FS100 OPERATOR'S MANUAL
FS100 MAINTENANCE MANUAL

The DX100/FS100 operator’s manual above corresponds to specific usage. Be sure to use the appropriate manual.
The FS100 OPERATOR’S MANUAL above is applicable to both FS100 and FS100L controllers.

Part Number: 163477-1CD
Revision: 1
MANDATORY

- This instruction manual is intended to explain mainly on the mechanical part of the MOTOMAN-MH6/MH6F for the application to the actual operation and for proper maintenance and inspection. It describes on safety and handling, details on specifications, necessary items on maintenance and inspection, to explain operating instructions and maintenance procedures. Be sure to read and understand this instruction manual thoroughly before installing and operating the manipulator.

- General items related to safety are listed in Chapter 1: Safety of the DX100/FS100 Instructions. To ensure correct and safe operation, carefully read the DX100/FS100 Instructions before reading this manual.

CAUTION

- Some drawings in this manual are shown with the protective covers or shields removed for clarity. Be sure all covers and shields are replaced before operating this product.

- The drawings and photos in this manual are representative examples and differences may exist between them and the delivered product.

- YASKAWA may modify this model without notice when necessary due to product improvements, modifications, or changes in specifications. If such modification is made, the manual number will also be revised.

- If your copy of the manual is damaged or lost, contact a YASKAWA representative to order a new copy. The representatives are listed on the back cover. Be sure to tell the representative the manual number listed on the front cover.

- YASKAWA is not responsible for incidents arising from unauthorized modification of its products. Unauthorized modification voids your product's warranty.
We suggest that you obtain and review a copy of the ANSI/RIA National Safety Standard for Industrial Robots and Robot Systems (ANSI/RIA R15.06-2012). You can obtain this document from the Robotic Industries Association (RIA) at the following address:

Robotic Industries Association
900 Victors Way
P.O. Box 3724
Ann Arbor, Michigan 48106
TEL: (734) 994-6088
FAX: (734) 994-3338
www.roboticsonline.com

Ultimately, well-trained personnel are the best safeguard against accidents and damage that can result from improper operation of the equipment. The customer is responsible for providing adequately trained personnel to operate, program, and maintain the equipment. NEVER ALLOW UNTRAINED PERSONNEL TO OPERATE, PROGRAM, OR REPAIR THE EQUIPMENT!

We recommend approved Yaskawa training courses for all personnel involved with the operation, programming, or repair of the equipment.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.
Notes for Safe Operation

Read this manual carefully before installation, operation, maintenance, or inspection of the DX100/FS100.

In this manual, the Notes for Safe Operation are classified as “WARNING”, “CAUTION”, “MANDATORY”, or “PROHIBITED”.

DANGER: Indicates an imminent hazardous situation which, if not avoided, could result in death or serious injury to personnel.

WARNING: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to personnel.

CAUTION: Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury to personnel and damage to equipment. It may also be used to alert against unsafe practices.

MANDATORY: Always be sure to follow explicitly the items listed under this heading.

PROHIBITED: Must never be performed.

Even items described as “CAUTION” may result in a serious accident in some situations.

At any rate, be sure to follow these important items.

To ensure safe and efficient operation at all times, be sure to follow all instructions, even if not designated as “CAUTION” and “WARNING”.

DANGER

- Maintenance and inspection must be performed by specified personnel.
- Failure to observe this caution may result in electric shock or injury.
- For disassembly or repair, contact your YASKAWA representative.
- Do not remove the motor, and do not release the brake.

Failure to observe these safety precautions may result in death or serious injury from unexpected turning of the manipulator's arm.
MH6/MH6F Zeroing Function

Notes for Safe Operation

<DX100>

WARNING

• Before operating the manipulator, check that servo power is turned OFF pressing the emergency stop buttons on the front door of the DX100 and the programming pendant. When the servo power is turned OFF, the SERVO ON LED on the programming pendant is turned OFF.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency. The manipulator should not be used if the emergency stop buttons do not function.

Fig. : Emergency Stop Button

• Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator. Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

Fig. : Release of Emergency Stop

TURN

• Observe the following precautions when performing teaching operations within the P-point maximum envelope of the manipulator:
  – Be sure to use a lockout device to the safeguarding when going inside. Also, display the sign that the operation is being performed inside the safeguarding and make sure no one closes the safeguarding.
  – View the manipulator from the front whenever possible.
  – Always follow the predetermined operating procedure.
  – Keep in mind the emergency response measures against the manipulator’s unexpected motion toward you.
  – Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

• Confirm that no person is present in the P-point maximum envelope of the manipulator and that you are in a safe location before:
  – Turning ON the power for the DX100.
  – Moving the manipulator with the programming pendant.
  – Running the system in the check mode.
  – Performing automatic operations.

Injury may result if anyone enters the P-point maximum envelope of the manipulator during operation. Always press an emergency stop button immediately if there is a problem.

The emergency stop buttons are located on the right of front door of the DX100 and the programming pendant.
<FS100>

**WARNING**

- Before operating the manipulator, check that servo power is turned OFF when the emergency stop button on the programming pendant is pressed.
  
  When the servo power is turned OFF, the SERVO ON LED on the programming pendant is turned OFF.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency.

*Fig. : Emergency Stop Button*

- In the case of not using the programming pendant, be sure to supply the emergency stop button on the equipment. Then before operating the manipulator, check to be sure that the servo power is turned OFF by pressing the emergency stop button.
  
  Connect the external emergency stop button to the 5-6 pin and 16-17 pin of the robot system signal connector (CN2).

- Upon shipment of the FS100, this signal is connected by a jumper cable in the dummy connector. To use the signal, make sure to supply a new connector, and then input it.

If the signal is input with the jumper cable connected, it does not function, which may result in personal injury or equipment damage.

- Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator.
  
  Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

*Fig. : Release of Emergency Stop*

- Observe the following precautions when performing teaching operations within the manipulator’s operating range:
  
  – Be sure to use a lockout device to the safeguarding when going inside. Also, display the sign that the operation is being performed inside the safeguarding and make sure no one closes the safeguarding.
  
  – Always follow the predetermined operating procedure.
  
  – Keep in mind the emergency response measures against the manipulator’s unexpected motion toward you.
  
  – Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

- Confirm that no person is present in the manipulator’s operating range and that you are in a safe location before:
  
  – Turning ON the FS100 power.
  
  – Moving the manipulator with the programming pendant.
  
  – Running the system in the check mode.
  
  – Performing automatic operations.

Injury may result if anyone enters the manipulator’s operating range during operation. Always press the emergency stop button immediately if there is a problem.

The emergency stop button is located on the right of the programming pendant.
CAUTION

- Perform the following inspection procedures prior to conducting manipulator teaching. If problems are found, repair them immediately, and be sure that all other necessary processing has been performed.
  - Check for problems in manipulator movement.
  - Check for damage to insulation and sheathing of external wires.
- For the DX100, always return the programming pendant to the hook on the cabinet of the DX100 after use. For the FS100, always return the programming pendant to a safe place after use.
  The programming pendant can be damaged if it is left in the manipulator’s work area, on the floor, or near fixtures.
- Read and understand the Explanation of Warning Labels in the DX100/FS100 Instructions before operating the manipulator:
Definition of Terms Used Often in This Manual (DX100)

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the controller, the programming pendant, and supply cables.

In this manual, the equipment is designated as follows.

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DX100 controller</td>
<td>DX100</td>
</tr>
<tr>
<td>DX100 programming pendant</td>
<td>Programming pendant</td>
</tr>
<tr>
<td>Cable between the manipulator and the controller</td>
<td>Manipulator cable</td>
</tr>
</tbody>
</table>

Definition of Terms Used Often in This Manual (FS100)

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the FS100 controller, manipulator cables, the FS100 programming pendant (optional), and the FS100 programming pendant dummy connector (optional).

In this manual, the equipment is designated as follows.

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>FS100 controller</td>
<td>FS100</td>
</tr>
<tr>
<td>FS100 programming pendant</td>
<td>Programming pendant</td>
</tr>
<tr>
<td>Cable between the manipulator and the controller</td>
<td>Manipulator Cable</td>
</tr>
<tr>
<td>FS100 programming pendant dummy connector</td>
<td>Programming pendant dummy connector</td>
</tr>
</tbody>
</table>

Description of the Operation Procedure

In the explanation of the operation procedure, the expression “Select • • •” means that the cursor is moved to the object item and the SELECT key is pressed, or that the item is directly selected by touching the screen.

Registered Trademark

In this manual, names of companies, corporations, or products are trademarks, registered trademarks, or bland names for each company or corporation. The indications of (R) and ™ are omitted.
The following warning labels are attached to the manipulator.
Always follow the warnings on the labels.
Also, an identification label with important information is placed on the body of the manipulator. Prior to operating the manipulator, confirm the contents.

**Fig. : Warning Label Locations**

**WARNING label A:**
Moving parts may cause injury

**WARNING label B:**
Do not enter robot work area.

**Nameplate:**
FS100

**WARNING Label A:**
Moving parts may cause injury

**WARNING Label B:**
Do not enter robot work area.
Safeguarding Tips

All operators, programmers, maintenance personnel, supervisors, and anyone working near the system must become familiar with the operation of this equipment. All personnel involved with the operation of the equipment must understand potential dangers of operation. General safeguarding tips are as follows:

- Improper operation can result in personal injury and/or damage to the equipment. Only trained personnel familiar with the operation of this equipment, the operator's manuals, the system equipment, and options and accessories should be permitted to operate this equipment.
- Improper connections can damage the equipment. All connections must be made within the standard voltage and current ratings of the equipment.
- The system must be placed in Emergency Stop (E-Stop) mode whenever it is not in use.
- In accordance with ANSI/RIA R15.06-2012, section 4.2.5, Sources of Energy, use lockout/tagout procedures during equipment maintenance. Refer also to Section 1910.147 (29CFR, Part 1910), Occupational Safety and Health Standards for General Industry (OSHA).

Mechanical Safety Devices

The safe operation of this equipment is ultimately the user's responsibility. The conditions under which the equipment will be operated safely should be reviewed by the user. The user must be aware of the various national codes, ANSI/RIA R15.06-2012 safety standards, and other local codes that may pertain to the installation and use of this equipment.

Additional safety measures for personnel and equipment may be required depending on system installation, operation, and/or location. The following safety equipment is provided as standard:

- Safety barriers
- Door interlocks
- Emergency stop palm buttons located on operator station

Check all safety equipment frequently for proper operation. Repair or replace any non-functioning safety equipment immediately.
Programming, Operation, and Maintenance Safety

All operators, programmers, maintenance personnel, supervisors, and anyone working near the system must become familiar with the operation of this equipment. Improper operation can result in personal injury and/or damage to the equipment. Only trained personnel familiar with the operation, manuals, electrical design, and equipment interconnections of this equipment should be permitted to program, or maintain the system. All personnel involved with the operation of the equipment must understand potential dangers of operation.

- Inspect the equipment to be sure no potentially hazardous conditions exist. Be sure the area is clean and free of water, oil, debris, etc.

- Be sure that all safeguards are in place. Check all safety equipment for proper operation. Repair or replace any non-functioning safety equipment immediately.

- Check the E-Stop button on the operator station for proper operation before programming. The equipment must be placed in Emergency Stop (E-Stop) mode whenever it is not in use.

- Back up all programs and jobs onto suitable media before program changes are made. To avoid loss of information, programs, or jobs, a backup must always be made before any service procedures are done and before any changes are made to options, accessories, or equipment.

- Any modifications to the controller unit can cause severe personal injury or death, as well as damage to the robot! Do not make any modifications to the controller unit. Making any changes without the written permission from YASKAWA will void the warranty.

- Some operations require a standard passwords and some require special passwords.

- The equipment allows modifications of the software for maximum performance. Care must be taken when making these modifications. All modifications made to the software will change the way the equipment operates and can cause severe personal injury or death, as well as damage parts of the system. Double check all modifications under every mode of operation to ensure that the changes have not created hazards or dangerous situations.

- This equipment has multiple sources of electrical supply. Electrical interconnections are made between the controller and other equipment. Disconnect and lockout/tagout all electrical circuits before making any modifications or connections.

- Do not perform any maintenance procedures before reading and understanding the proper procedures in the appropriate manual.

- Use proper replacement parts.

- Improper connections can damage the equipment. All connections must be made within the standard voltage and current ratings of the equipment.
Maintenance Safety

Turn the power OFF and disconnect and lockout/tagout all electrical circuits before making any modifications or connections.

Perform only the maintenance described in this manual. Maintenance other than specified in this manual should be performed only by YASKAWA-trained, qualified personnel.

Summary of Warning Information

This manual is provided to help users establish safe conditions for operating the equipment. Specific considerations and precautions are also described in the manual, but appear in the form of Dangers, Warnings, Cautions, and Notes.

It is important that users operate the equipment in accordance with this instruction manual and any additional information which may be provided by YASKAWA. Address any questions regarding the safe and proper operation of the equipment to YASKAWA Customer Support.
Customer Support Information

If you need assistance with any aspect of your MH6/MH6F Zeroing Function system, please contact YASKAWA Customer Support at the following 24-hour telephone number:

(937) 847-3200

For routine technical inquiries, you can also contact YASKAWA Customer Support at the following e-mail address:

techsupport@motoman.com

When using e-mail to contact YASKAWA Customer Support, please provide a detailed description of your issue, along with complete contact information. Please allow approximately 24 to 36 hours for a response to your inquiry.

Please have the following information ready before you call Customer Support:

• System
  MH6/MH6F Zeroing Function

• Primary Application

• Controller
  DX100/FS100

• Software Version
  Access this information on the Programming Pendant’s LCD display screen by selecting {MAIN MENU} - {SYSTEM INFO} - {VERSION}

• Robot Serial Number
  Located on the robot data plate

• Robot Sales Order Number
  Located on the DX100/FS100 controller data plate

Please use e-mail for routine inquiries only. If you have an urgent or emergency need for service, replacement parts, or information, you must contact YASKAWA Customer Support at the telephone number shown above.

         1.2.2.8 Zeroing Procedure for T-Axis
   1.3 Errors in the Zeroing Operation and Solutions
1 Zeroing Function

Zeroing function automatically allows for the restoration of the home position data when the manipulator’s home position data disappear. (Optional function)

This function only applies to the manipulator which was ordered to be equipped with the zeroing function and shipped.

1.1 Outline

The DX100/FS100 stores the manipulator home position based on the pulse value of each axis encoder. Since the home position is already set and registered before shipment, zeroing operation does not need to be performed at the normal operation. However, zeroing operation needs to be performed to restore the home position since the home position data disappear when performing the following operations, or the followings occur.

- Replacement of Motors
- Replacement of Encoders
- Backup Battery Exhaustion in the Manipulator

**NOTE**

The home position data is stored by the backup battery. If the battery is exhausted, the home position data disappear again when turning OFF the DX100/FS100 power even if the zeroing operation is performed.

Be sure to replace the battery periodically. For the battery replacement, refer to the section “Maintenance and Inspection” of the “MOTOMAN-MH6/MH6F INSTRUCTIONS”.

**NOTE**

The home positioning cannot be performed accurately by the zeroing operation if changing the combination of the manipulator and the DX100/FS100.
1.2 Details on Zeroing Function

1.2.1 System Configuration

The system configuration of the zeroing function is described in the following.

1.2.1.1 System Configuration of the Zeroing Device Using the CF Card

*Fig. 1-1: Zeroing System Configuration Using CF Card Slot*

![Diagram of zeroing system configuration using CF card slot]

*Table 1-1: Components for Zeroing Device Using CF Card Slot*

1.2.2 Operational Procedure and Cautions

### WARNING

- False zeroing operation may lead to the manipulator’s operation error. Be sure to follow the set procedures and perform the zeroing operation upon ensuring the safety. Injury may result from unintentional or unexpected manipulator motion, or operation error.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The zeroing function is only valid when the security mode is set to the management mode.</td>
</tr>
<tr>
<td>For the security mode, refer to chapter 7 “Security System” of the “DX100/FS100 INSTRUCTIONS”.</td>
</tr>
</tbody>
</table>

1.2.2.1 Before the Zeroing Operation

Remove the tool attached to the manipulator and perform the zeroing operation for accurate home positioning by the zeroing function. If the zeroing operation is performed with the tool attached to the manipulator, the tool’s weight may affect positioning accuracy.

1.2.2.2 Connection of the Zeroing Devices

1. When using the CF card slot: Insert the communication interface (REX-CF60) into the CF card slot of the programming pendant.

   When using the USB slot: Insert the communication interface (REX-USB60F) into the USB slot of the programming pendant.

*Fig. 1-3: Insertion of the Communication Interface*
2. When using the CF card slot: Connect the communication interface (REX-CF60) with the amplifier by using the communication cable (C232N-915).

When using the USB slot: Connect the communication interface (REX-USB60F) with the amplifier by using the communication cable (C232N-915).

3. Connect the lead wire to the amplifier.
   (Do not connect the sensor yet.)

The installation locations of the zeroing sensors for each axis are shown in Fig. 1-4 “Installation Locations of the Zeroing Sensors”. Perform the zeroing operation for every axis by referring to the procedures described in the following pages.

---

**Fig. 1-4: Installation Locations of the Zeroing Sensors**

- **T-axis**
- **R-axis**
- **U-axis**
- **B-axis**
- **L-axis**
- **S-axis**
1.2.2.3 Zeroing Procedure for S-Axis

Perform the zeroing operation for S-axis with the following procedure.

1. Remove the plug and cover from the attaching portion for the sensor.

![S-axis image]

2. Perform the home position alignment by adjusting the alignment marks on the S-axis of the manipulator in the "TEACH" mode.

![NOTE]

Be sure to remove the cover. If the zeroing operation is performed with the cover on, the sensor may be damaged.

![NOTE]

The plug, cover, and cover mounting screws are small parts. Be sure not to lose them during the operation.

![NOTE]

Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator. Injury may result from unintentional or unexpected manipulator motion, or operation error.

![NOTE]

Be sure to adjust the home position alignment marks and perform the zeroing operation.

![NOTE]

Confirm that no persons are present in the P-point maximum envelope of the manipulator and the operator is in a safe place. Injury may result from unintentional or unexpected manipulator motion, or operation error.
1 Zeroing Function

3. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or sensor detecting element after removing the plug and cover.
   – Remove the spatter, fume, and rust if they are found.

4. Install the sensor onto the mounting holes.

   
   Never use tools, or avoid excessive force on the sensor.
   Failure to observe this instruction may result in damage to the sensor.

5. Connect the lead wire to the sensor.

6. Turn ON the amplifier power.
   – If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

7. Set the mode selector switch on the programming pendant to “TEACH”.

8. Select (Robot) → {Zeroing} from [Main Menu].
   Then, select “S: S-axis” on the touch panel.
MH6/MH6F Zeroing Function

1. Zeroing Function
2. Details on Zeroing Function

9. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

**NOTE**
Confirm that no persons are present in the P-point maximum envelope of the manipulator and are in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

10. Press {Zeroing} on the touch panel, and pop-up window appears displaying the CAUTION message.

11. Press (OK) by following the message in the pop-up window, and the manipulator starts automatically.

**NOTE**
Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

The manipulator motion is hard to be detected due to its slight motion.

**NOTE**
Confirm that no persons approach the manipulator.
12. The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

13. Turn OFF the servo power.

**NOTE**

Be sure to turn OFF the servo power to approach the manipulator.

Injury may result from unintentional or unexpected manipulator motion.

14. Turn OFF the amplifier power.

15. Disconnect the lead wire from the sensor.

16. Remove the sensor from the manipulator.

**NOTE**

After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.

If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.

17. Reinstall the plug and cover onto the manipulator.

**NOTE**

Be sure to install the plug and cover to prevent any dirt on the sensor mounting holes or sensor detecting element.

The zeroing operation cannot be performed if any dirt is attached on them.
18. Remove dust on the sensor for the sensor dust.

19. Confirm the manipulator position as follows:
   Select {Robot} from [Main Menu] → {Second Home Position}.
   – The Second Home Position window appears.
   – For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.

20. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant. Then, press [FWD] to move TCP to the second home position.
   – Check for any position deviation of the manipulator’s second home position.

21. Select {Data} from [Main Menu] → {Confirm Position}.
   – The message “Home position checked” appears.

22. Confirm the home position with teaching operation before restarting automatic operation by playback.
   – For the home position confirmation, check for:
     • The manipulator’s second home position deviation
     • Any position deviation at each teaching points
     • Test runs

   **NOTE**
   Be sure to confirm the home position before starting automatic operation.
   If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.

1.2.2.4 Zeroing Procedure for L-Axis

Perform the zeroing operation for L-axis with the following procedure.

1. Remove the plug and cover from the attaching portion for the sensor.

   **NOTE**
   Be sure to remove the cover. If the zeroing operation is performed with the cover on, the sensor may be damaged.
1. Zeroing Function
1.2 Details on Zeroing Function

The plug, cover, and cover mounting screws are small parts.
Be sure not to lose them during the operation.

Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

2. Perform the home position alignment by adjusting the alignment marks on the L-axis of the manipulator in the “TEACH” mode.

Be sure to adjust the home position alignment marks and perform the zeroing operation.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

3. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or sensor detecting element after removing the plug and cover.
   – Remove the spatter, fume, and rust if they are found.

4. Install the sensor onto the mounting holes.

Never use tools, or avoid excessive force on the sensor.
Failure to observe this instruction may result in damage to the sensor.

5. Connect the lead wire to the sensor.

6. Turn ON the amplifier power.
   – If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

7. Set the mode selector switch on the programming pendant to “TEACH”.
1. Zeroing Function

1.2 Details on Zeroing Function

8. Select {Robot} → {Zeroing} from [Main Menu].
Then, select "L: L-axis" on the touch panel.

9. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

   **NOTE**
   Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
   Injury may result from unintentional or unexpected manipulator motion, or operation error.

10. Press {Zeroing} on the touch panel, and pop-up window appears displaying the CAUTION message.
1. Zeroing Function

1.2 Details on Zeroing Function

11. Press {OK} by following the message in the pop-up window, and the manipulator starts automatically.

**NOTE**

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

**NOTE**

The manipulator motion is hard to be detected due to its slight motion.

Confirm that no persons approach the manipulator.

12. The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

13. Turn OFF the servo power.

**NOTE**

Be sure to turn OFF the servo power to approach the manipulator.

Injury may result from unintentional or unexpected manipulator motion.

14. Turn OFF the amplifier power.

15. Disconnect the lead wire from the sensor.

16. Remove the sensor from the manipulator.

**NOTE**

After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.

If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.
17. Reinstall the plug and cover onto the manipulator.

**NOTE**

Be sure to install the plug and cover to prevent any dirt on the sensor mounting holes or sensor detecting element. The zeroing operation cannot be performed if any dirt is attached on them.

18. Remove dust on the sensor for the sensor dust.

19. Confirm the manipulator position as follows:
   - Select {Robot} from [Main Menu] → {Second Home Position}.
   - The Second Home Position window appears.
   - For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.

20. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.
   - Press [FWD] to move TCP to the second home position.
   - Check for any position deviation of the manipulator’s second home position.

21. Select {Data} from [Main Menu] → {Confirm Position}.
   - The message “Home position checked” appears.

22. Confirm the home position with teaching operation before restarting automatic operation by playback.
   - For the home position confirmation, check for:
     - The manipulator’s second home position deviation
     - Any position deviation at each teaching points
     - Test runs

**NOTE**

Be sure to confirm the home position before starting automatic operation.

If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.
1.2.2.5 Zeroing Procedure for U-Axis

Perform the zeroing operation for U-axis with the following procedure.

1. Remove the plug and cover from the attaching portion for the sensor.

   **NOTE**
   Be sure to remove the cover. If the zeroing operation is performed with the cover on, the sensor may be damaged.

   The plug, cover, and cover mounting screws are small parts.
   Be sure not to lose them during the operation.

   Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator.
   Injury may result from unintentional or unexpected manipulator motion, or operation error.

2. Perform the home position alignment by adjusting the alignment marks on the U-axis of the manipulator in the “TEACH” mode.

   **NOTE**
   Be sure to adjust the home position alignment marks and perform the zeroing operation.

   Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
   Injury may result from unintentional or unexpected manipulator motion, or operation error.
3. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or indentation after removing the plug and cover.
   – Remove the spatter, fume, and rust if they are found.

4. Install the sensor onto the mounting holes.

   Never use tools, or avoid excessive force on the sensor. Failure to observe this instruction may result in damage to the sensor.

5. Connect the lead wire to the sensor.

6. Turn ON the amplifier power.
   – If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

7. Set the mode selector switch on the programming pendant to “TEACH”.

8. Select {Robot} → {Zeroing} from [Main Menu]. Then, select “U: U-axis” on the touch panel.
9. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

**NOTE**

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

10. Press (Zeroing) on the touch panel, and pop-up window appears displaying the CAUTION message.

11. Press (OK) by following the message in the pop-up window, and the manipulator starts automatically.

**NOTE**

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

**NOTE**

The manipulator motion is hard to be detected due to its slight motion.

Confirm that no persons approach the manipulator.
12. The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

13. Turn OFF the servo power.

![Note]
Be sure to turn OFF the servo power to approach the manipulator.

Injury may result from unintentional or unexpected manipulator motion.

14. Turn OFF the amplifier power.

15. Disconnect the lead wire from the sensor.

16. Remove the sensor from the manipulator.

![Note]
After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.

If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.

17. Reinstall the plug and cover onto the manipulator.

![Note]
Be sure to install the plug and cover to prevent any dirt on the sensor mounting holes or sensor detecting element.

The zeroing operation cannot be performed if any dirt is attached on them.
18. Remove dust on the sensor for the sensor dust.

19. Confirm the manipulator position as follows:
   Select (Robot) from [Main Menu] → (Second Home Position).
   - The Second Home Position window appears.
   - For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.

20. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.
   Then, press [FWD] to move TCP to the second home position.
   - Check for any position deviation of the manipulator’s second home position.

21. Select (Data) from [Main Menu] → (Confirm Position).
   - The message “Home position checked” appears.

22. Confirm the home position with teaching operation before restarting automatic operation by playback.
   - For the home position confirmation, check for:
     - The manipulator’s second home position deviation
     - Any position deviation at each teaching points
     - Test runs

   **NOTE**
   Be sure to confirm the home position before starting automatic operation.

   If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.

**1.2.2.6 Zeroing Procedure for R-Axis**

Perform the zeroing operation for R-axis with the following procedure.

1. Remove the plug from the attaching portion for the sensor.

   **NOTE**
   The plug is small parts.
   Be sure not to lose it during the operation.
1 Zeroing Function

1.2 Details on Zeroing Function

**NOTE**
Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

2. Perform the home position alignment by adjusting the alignment marks on the R-axis of the manipulator in the “TEACH” mode.

**NOTE**
Be sure to adjust the home position alignment marks and perform the zeroing operation.

**NOTE**
Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

3. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or sensor detecting element after removing the plug and cover.
   – Remove the spatter, fume, and rust if they are found.

4. Install the sensor onto the mounting holes.

**NOTE**
Never use tools, or avoid excessive force on the sensor.
Failure to observe this instruction may result in damage to the sensor.

5. Connect the lead wire to the sensor.

6. Turn ON the amplifier power.
   – If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

7. Set the mode selector switch on the programming pendant to “TEACH”.

---

Be sure to adjust the home position alignment marks and perform the zeroing operation.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

Never use tools, or avoid excessive force on the sensor.
Failure to observe this instruction may result in damage to the sensor.
8. Select {Robot} → {Zeroing} from [Main Menu]. Then, select “R: R-axis” on the touch panel.

9. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place. Injury may result from unintentional or unexpected manipulator motion, or operation error.

10. Press {Zeroing} on the touch panel, and pop-up window appears displaying the CAUTION message.

11. Press {OK} by following the message in the pop-up window, and the manipulator starts automatically.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place. Injury may result from unintentional or unexpected manipulator motion, or operation error.
1. The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

12. The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

13. Turn OFF the servo power.

**NOTE**

Be sure to turn OFF the servo power to approach the manipulator.

Injury may result from unintentional or unexpected manipulator motion.

14. Turn OFF the amplifier power.

15. Disconnect the lead wire from the sensor.

16. Remove the sensor from the manipulator.

**NOTE**

After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.

If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.

17. Reinstall the plug onto the manipulator.

**NOTE**

Be sure to install the plug to prevent any dirt on the sensor mounting holes or sensor detecting element.

The zeroing operation cannot be performed if any dirt is attached on them.
18. Remove dust on the sensor for the sensor dust.

19. Confirm the manipulator position as follows:
   - Select {Robot} from [Main Menu] → {Second Home Position}.
   - The Second Home Position window appears.
   - For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.

20. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.
    Then, press [FWD] to move TCP to the second home position.
    - Check for any position deviation of the manipulator’s second home position.

21. Select {Data} from [Main Menu] → {Confirm Position}.
    - The message “Home position checked” appears.

22. Confirm the home position with teaching operation before restarting automatic operation by playback.
    - For the home position confirmation, check for:
      - The manipulator’s second home position deviation
      - Any position deviation at each teaching points
      - Test runs

   **NOTE**
   Be sure to confirm the home position before starting automatic operation.
   If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.

1.2.2.7 Zeroing Procedure for B-Axis

Perform the zeroing operation for B-axis with the following procedure.

1. Remove the cover attached on the side of the U-arm as shown in the figure below. (The left hand side as viewed from the S-axis rotation center in the manipulator home position.)
1 Zeroing Function

1.2 Details on Zeroing Function

2. Remove the plug and cover from the attaching portion for the sensor.

**NOTE**  
Be sure to remove the cover. If the zeroing operation is performed with the cover on, the sensor may be damaged.

**NOTE**  
The plug, cover, and cover mounting screws are small parts.  
Be sure not to lose them during the operation.

**NOTE**  
Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator.  
Injury may result from unintentional or unexpected manipulator motion, or operation error.
3. In the “TEACH” mode, set the B-axis parallel to the U-arm regardless of the U-arm position/direction as shown in the figure below.

Apart from the other axes, the alignment marks are not used for the B-axis zeroing operation.

Be sure to set the B-axis parallel to the U-arm, then perform the zeroing operation.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

4. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or sensor detecting element after removing the plug and cover.
   - Remove the spatter, fume, and rust if they are found.
5. Install the sensor onto the mounting holes.

**NOTE**

Never use tools, or avoid excessive force on the sensor. Failure to observe this instruction may result in damage to the sensor.

6. Connect the lead wire to the sensor.

7. Turn ON the amplifier power.
   - If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

8. Set the mode selector switch on the programming pendant to "TEACH".

9. Select {Robot} → {Zeroing} from [Main Menu]. Then, select “B: B-axis” on the touch panel.
1 Zeroing Function

1.2 Details on Zeroing Function

10. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

![Zeroing Function Diagram]

**NOTE**
Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

11. Press {Zeroing} on the touch panel, and pop-up window appears displaying the CAUTION message.

12. Press {OK} by following the message in the pop-up window, and the manipulator starts automatically.

**NOTE**
Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.
Injury may result from unintentional or unexpected manipulator motion, or operation error.

The manipulator motion is hard to be detected due to its slight motion.
Confirm that no persons approach the manipulator.
The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

14. Turn OFF the servo power.

**NOTE**
Be sure to turn OFF the servo power to approach the manipulator.
Injury may result from unintentional or unexpected manipulator motion.

15. Turn OFF the amplifier power.

16. Disconnect the lead wire from the sensor.

17. Remove the sensor from the manipulator.

**NOTE**
After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.
If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.

18. Reinstall the plug and cover onto the manipulator.

**NOTE**
Be sure to install the plug and cover to prevent any dirt on the sensor mounting holes or sensor detecting element.
The zeroing operation cannot be performed if any dirt is attached on them.

19. Remove dust on the sensor for the sensor dust.

20. Confirm the manipulator position as follows:
Select {Robot} from [Main Menu] → {Second Home Position}.

- The Second Home Position window appears.
- For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.
21. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant. Then, press [FWD] to move TCP to the second home position.
   - Check for any position deviation of the manipulator’s second home position.

22. Select {Data} from [Main Menu] → {Confirm Position}.
   - The message “Home position checked” appears.

23. Confirm the home position with teaching operation before restarting automatic operation by playback.
   - For the home position confirmation, check for:
     - The manipulator’s second home position deviation
     - Any position deviation at each teaching points
     - Test runs

Be sure to confirm the home position before starting automatic operation.
If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.

1.2.2.8 Zeroing Procedure for T-Axis

Perform the zeroing operation for T-axis with the following procedure.

1. Remove the plug from the attaching portion for the sensor.

The plug is small parts,
Be sure not to lose it during the operation.

Be sure that the servo power is OFF and no safety hazard is around the manipulator when approaching the manipulator.
Injury may result from unintentional or unexpected manipulator motion, or operation error.
1. Zeroing Function

1.2 Details on Zeroing Function

2. Perform the home position alignment by adjusting the alignment marks on the T-axis of the manipulator in the “TEACH” mode.

**NOTE**

Be sure to adjust the home position alignment marks and perform the zeroing operation.

**NOTE**

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

3. Check that no spatter, fume or rust is attached in/on the sensor mounting hole, or sensor detecting element after removing the plug and cover.
   – Remove the spatter, fume, and rust if they are found.

4. Install the sensor onto the mounting holes.

**NOTE**

Never use tools, or avoid excessive force on the sensor.

Failure to observe this instruction may result in damage to the sensor.

5. Connect the lead wire to the sensor.

6. Turn ON the amplifier power.
   – If the amplifier power has been turned ON for prolonged periods of time, turn OFF the power once and turn ON the power again.

7. Set the mode selector switch on the programming pendant to “TEACH”.
1 Zeroing Function

1.2 Details on Zeroing Function

8. Select (Robot) → (Zeroing) from [Main Menu]. Then, select “T: T-axis” on the touch panel.

9. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.

10. Press {Zeroing} on the touch panel, and pop-up window appears displaying the CAUTION message.

11. Press {OK} by following the message in the pop-up window, and the manipulator starts automatically.

Confirm that no persons are present in the P-point maximum envelope of the manipulator, and the operator is in a safe place.

Injury may result from unintentional or unexpected manipulator motion, or operation error.
1 Zeroing Function

1.2 Details on Zeroing Function

The programming pendant screen shows the message to confirm the completion of the zeroing operation, then indicates the calculated absolute data.

12. Turn OFF the servo power.

- Be sure to turn OFF the servo power to approach the manipulator.
- Injury may result from unintentional or unexpected manipulator motion.

13. Turn OFF the amplifier power.

14. Disconnect the lead wire from the sensor.

15. Remove the sensor from the manipulator.

- After the zeroing operation, be sure to remove the sensor from the manipulator before starting the manipulator.
- If the manipulator is operated with the sensor attached to the manipulator, the sensor may be damaged.

16. Reinstall the plug onto the manipulator.

- Be sure to install the plug to prevent any dirt on the sensor mounting hoes or sensor detecting element.
- The zeroing operation cannot be performed if any dirt is attached on them.

17. Remove dust on the sensor for the sensor dust.
18. Confirm the manipulator position as follows:
   Select {Robot} from [Main Menu] → {Second Home Position}.
   – The Second Home Position window appears.
   – For safety reasons, automatic operations by playback cannot be performed unless the position is confirmed.

19. Turn ON the servo power by the [SERVO ON READY] button and Enable switch on the programming pendant.
    Then, press [FWD] to move TCP to the second home position.
    – Check for any position deviation of the manipulator’s second home position.

20. Select {Data} from [Main Menu] → {Confirm Position}.
    – The message “Home position checked” appears.

21. Confirm the home position with teaching operation before restarting automatic operation by playback.
    – For the home position confirmation, check for:
      • The manipulator’s second home position deviation
      • Any position deviation at each teaching points
      • Test runs

Be sure to confirm the home position before starting automatic operation.
If false home position is input by the zeroing function, it may lead to errors in the manipulator performance.
### 1.3 Errors in the Zeroing Operation and Solutions

If errors occur during the zeroing operation, confirm the error contents and perform the following operations.

<table>
<thead>
