Upon receipt of the product and prior to initial operation, read these instructions below thoroughly, and retain for future reference.

MOTOMAN INSTRUCTIONS

MOTOMAN-### INSTRUCTIONS
DX200 INSTRUCTIONS
DX200 OPERATOR’S MANUAL (for each purpose)
DX200 MAINTENANCE MANUAL

Please have the following information available when contacting Yaskawa Customer Support:

- System
- Primary Application
- Software Version (Located on Programming Pendant by selecting: {Main Menu} - {System Info} - {Version})
- Robot Serial Number (Located on robot data plate)
- Robot Sales Order Number (Located on controller data plate)

Part Number: 165300-1CD
Revision: 8
MANDATORY

• This manual explains the various components of the DX200 system and general operations. Read this manual carefully and be sure to understand its contents before handling the DX200.

• General items related to safety are listed in Chapter 1: Safety of the DX200 Instructions. To ensure correct and safe operation, carefully read the DX200 Instruction before reading this manual.

CAUTION

• Some drawings in this manual are shown with the protective covers or shields removed for clarity. Be sure all covers and shields are replaced before operating this product.

• The drawings and photos in this manual are representative examples and differences may exist between them and the delivered product.

• YASKAWA may modify this model without notice when necessary due to product improvements, modifications, or changes in specifications. If such modification is made, the manual number will also be revised.

• If your copy of the manual is damaged or lost, contact a YASKAWA representative to order a new copy. The representatives are listed on the back cover. Be sure to tell the representative the manual number listed on the front cover.

• YASKAWA is not responsible for incidents arising from unauthorized modification of its products. Unauthorized modification voids your product’s warranty.
Notes for Safe Operation

Read this manual carefully before installation, operation, maintenance, or inspection of the DX200.

In this manual, the Notes for Safe Operation are classified as "WARNING," "CAUTION," "MANDATORY," or "PROHIBITED."

**DANGER**
Indicates an imminent hazardous situation which, if not avoided, could result in death or serious injury to personnel.

**WARNING**
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to personnel.

**CAUTION**
Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury to personnel and damage to equipment. It may also be used to alert against unsafe practices.

**MANDATORY**
Always be sure to follow explicitly the items listed under this heading.

**PROHIBITED**
Must never be performed.

Even items described as "CAUTION" may result in a serious accident in some situations.

At any rate, be sure to follow these important items.

**NOTE**
To ensure safe and efficient operation at all times, be sure to follow all instructions, even if not designated as "DANGER," "WARNING" and "CAUTION."
WARNING

- Before operating the manipulator, check that servo power is turned off when the emergency stop buttons on the front door of the DX 100 and programing pendant are pressed. When the servo power is turned off, the SERVO ON LED on the programing pendant is turned off.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency. The manipulator should not be used if the emergency stop buttons do not function.

*Fig.: Emergency Stop Button*

- Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator. Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

*Fig.: Release of EM*

- Observe the following precautions when performing teaching operations within the P-point maximum envelope of the manipulator:
  - Be sure to use a lockout device to the safeguarding when going inside. Also, display the sign that the operation is being performed inside the safeguarding and make sure no one closes the safeguarding.
  - View the manipulator from the front whenever possible.
  - Always follow the predetermined operating procedure.
  - Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

- Confirm that no person is present in the P-point maximum envelope of the manipulator and that you are in a safe location before:
  - Turning on the power for the DX200.
  - Moving the manipulator with the programming pendant.
  - Running the system in the check mode.
  - Performing automatic operations.

Injury may result if anyone enters the working envelope of the manipulator during operation. Always press an emergency stop button immediately if there are problems.

The emergency stop button is located on the right of the front door of the DX 100 and programing pendant.
**Definition of Terms Used Often in This Manual**

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the controller, the programming pendant, and supply cables.

In this manual, the equipment is designated as follows.

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DX200 controller</td>
<td>DX200</td>
</tr>
<tr>
<td>DX200 programming pendant</td>
<td>Programming pendant</td>
</tr>
<tr>
<td>Cable between the manipulator and the controller</td>
<td>Manipulator cable</td>
</tr>
</tbody>
</table>
Descriptions of the programming pendant keys, buttons, and displays are shown as follows:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Programming Pendant</td>
<td><strong>Character Keys</strong> /<strong>Symbol Keys</strong> The keys which have characters or symbols printed on them are denoted with [ ]. e.g. [ENTER]</td>
</tr>
<tr>
<td></td>
<td><strong>Axis Keys</strong> /<strong>Numeric Keys</strong> [Axis Key] and [Numeric Key] are generic names for the keys for axis operation and number input.</td>
</tr>
<tr>
<td></td>
<td><strong>Keys pressed simultaneously</strong> When two keys are to be pressed simultaneously, the keys are shown with a &quot;+&quot; sign between them, e.g. [SHIFT]+[COORD].</td>
</tr>
<tr>
<td></td>
<td><strong>Mode Switch</strong> Mode Switch can select three kinds of modes that are denoted as follows: REMOTE, PLAY or TEACH.</td>
</tr>
<tr>
<td></td>
<td><strong>Button</strong> The three buttons on the upper side of the programming pendant are denoted as follows: START, HOLD, or EMERGENCY STOP.</td>
</tr>
<tr>
<td></td>
<td><strong>Displays</strong> The menu displayed in the programming pendant is denoted with { }. e.g. {JOB}</td>
</tr>
</tbody>
</table>

![Diagram of Programming Pendant](image-url)
Description of the Operation Procedure

In the explanation of the operation procedure, the expression "Select • • • " means that the cursor is moved to the object item and [SELECT] is pressed, or that the item is directly selected by touching the screen.

Registered Trademark

In this manual, names of companies, corporations, or products are trademarks, registered trademarks, or brand names for each company or corporation. The indications of (R) and ™ are omitted.

   6.2.1 Function Overview ...................................................................................... 6-3
      6.2.1.1 Parallel Shift of Step .......................................................................... 6-4
      6.2.1.2 Parallel Shift of Job ........................................................................... 6-4
   6.2.2 Setting the Shift Value .................................................................................. 6-5
      6.2.2.1 Coordinate Systems .......................................................................... 6-5
      6.2.2.2 Setting the Shift Value ....................................................................... 6-5
   6.2.3 Registering Shift Instructions .......................................................................... 6-7
      6.2.3.1 SFTON Instruction ............................................................................ 6-8
      6.2.3.2 SFTOF Instruction ............................................................................ 6-10
      6.2.3.3 MSHIFT Instruction .......................................................................... 6-11
   6.2.4 Continuation of the Parallel Shift Function ....................................................... 6-13

   6.2.5 Parallel Shift Function Operation Method ....................................................... 6-14

   6.2.6 Examples of Use ............................................................................................. 6-15
      6.2.6.1 Example of Use of Shift Addition/Subtraction .................................... 6-15
      6.2.6.2 Example of Use of MSHIFT Instruction ............................................. 6-16
6.6.3.1 Multi Window Mode and Single Window Mode ..................................... 6-60
6.6.3.2 Displaying the Status of Plural (more than two) Window Dividing
   Pattern Setting................................................................................. 6-60
6.6.3.3 Displaying of Active Window and Non-Active Window................. 6-61
6.6.3.4 Limited Matters in Multi Window Mode......................................... 6-61
6.6.4 Operation of Multi Window................................................................ 6-62
   6.6.4.1 Switching of Multi Window Mode and Single Window Mode........ 6-62
   6.6.4.2 Switching of Active Window................................................... 6-64
6.6.5 Switching the Axis Operation Control Group ..................................... 6-66
   6.6.5.1 S2C540 “Choosing Method of Notifying the Change of Axis Operation
          Control Group when Switching the Active Window”...................... 6-66
6.7 Simple Menu Function ........................................................................... 6-68
   6.7.1 Simple Menu................................................................................ 6-68
   6.7.2 Registering the Layout Patterns to User Definition Menu.............. 6-69
      6.7.2.1 Register with (REGIST) Button.............................................. 6-69
      6.7.2.2 Register by Key Operation.................................................... 6-70
      6.7.2.3 Conditions to Register the Layout......................................... 6-71
      6.7.2.4 The Displayed Layout Name................................................... 6-71
   6.7.3 Calling Up of the Registered Layout............................................... 6-72
      6.7.3.1 Calling up............................................................................... 6-72
      6.7.3.2 Conditions when Calling Up the Layout................................. 6-73
   6.7.4 Editing “USER DEFINITION” Menu.............................................. 6-74
      6.7.4.1 Displaying “USER DEFINITION” Window.............................. 6-74
      6.7.4.2 Displaying “USER DEFINITION MENU” window Under Main Menu.... 6-75
      6.7.4.3 Change the Name of Registered Layout Name.......................... 6-76
      6.7.4.4 Deleting the Layout............................................................... 6-78
      6.7.4.5 Delete All Layout................................................................. 6-80
   6.7.5 Save/Load (to external memory devices) the User Definition Menu Data .... 6-82
      6.7.5.1 Saving the Data................................................................. 6-82
      6.7.5.2 Loading the Data................................................................. 6-84
6.8 Parameter Setting Function..................................................................... 6-86
   6.8.1 Parameter Setting Function............................................................ 6-86
   6.8.2 Teaching Condition Setting............................................................ 6-88
   6.8.3 Operation Condition Setting.......................................................... 6-91
   6.8.4 Operate Enable Setting................................................................. 6-94
   6.8.5 Function Enable Setting............................................................... 6-96
   6.8.6 Jog Condition Setting................................................................. 6-98
   6.8.7 Playback Condition Setting........................................................... 6-99
   6.8.8 Functional Condition Setting....................................................... 6-101
6.9 Jog Key Allocation .................................................................................. 6-102
   6.9.1 Jog Key Allocation Function......................................................... 6-102
   6.9.2 Jog Key Allocation Setting............................................................ 6-103

## Contents

6.15.4.4 Deleting Logging Information ............................................................. 6-148  
6.15.4.5 Selecting Operations to Acquire Logs ................................................. 6-149

### 6.16 Analog Output Function Corresponding to Speed ................................. 6-151

#### 6.16.1 Overview ......................................................................................... 6-151

#### 6.16.2 Instructions ..................................................................................... 6-152

- 6.16.2.1 Instructions for Analog Output Function Corresponding to Speed .... 6-152
- 6.16.2.2 Registration of Instructions ............................................................. 6-154
- 6.16.2.3 Analog Output Display ................................................................. 6-157

#### 6.16.3 Examples ......................................................................................... 6-158

- 6.16.3.1 Examples of Output Characteristics .............................................. 6-158
- 6.16.3.2 Example of Variation of Operating Speed and Analog Output Value 6-159

#### 6.16.4 Filter Process .................................................................................. 6-160

- 6.16.4.1 When Parameter is Set to "0" ......................................................... 6-160
- 6.16.4.2 When Parameter is Set to Values Other Than "0" ......................... 6-160
- 6.16.4.3 Parameter Setting ......................................................................... 6-160

#### 6.16.5 Precautions ..................................................................................... 6-163

- 6.16.5.1 When Analog Output Corresponding to Speed is Interrupted .......... 6-163
- 6.16.5.2 When More than One Manipulator is Used ..................................... 6-163

### 6.17 QR Code Creation Function ................................................................. 6-164

#### 6.17.1 Outline ......................................................................................... 6-164

#### 6.17.2 Main Function ................................................................................. 6-166

#### 6.17.3 QR Code Creation Function Start-Up Method ................................. 6-168

- 6.17.3.1 Start-up the function by pressing {SYSTEM INFO} under the main menu → {QR CODE} .................................................. 6-168
- 6.17.3.2 Start-up the function by selecting {UTILITY} under the pull down menu → {QR CODE DISPLAY} ............................. 6-170
- 6.17.3.3 Start-up the function by selecting {UTILITY} under the pull down menu → {QR CODE ALL PAGE} ...................... 6-171

#### 6.17.4 Display Configuration ....................................................................... 6-172

#### 6.17.5 Operation Method .......................................................................... 6-173

- 6.17.5.1 Data for QR Code Select Area .................................................... 6-173
- 6.17.5.2 QR Code Display Area ............................................................... 6-173

#### 6.17.6 QR Code Structure .......................................................................... 6-174

- 6.17.6.1 Basic Structure ............................................................................ 6-174
- 6.17.6.2 Data Header .................................................................................. 6-174
- 6.17.6.3 System Information ...................................................................... 6-176
- 6.17.6.4 Alarm ......................................................................................... 6-177
- 6.17.6.5 Alarm History .............................................................................. 6-178
- 6.17.6.6 Monitoring Time ......................................................................... 6-180
- 6.17.6.7 Home Position ............................................................................. 6-184
- 6.17.6.8 Current Position .......................................................................... 6-185
- 6.17.6.9 Servo Monitor ............................................................................. 6-190

#### 6.17.7 MOTOMAN Touch! .......................................................................... 6-193
6.17.7.1 Installing Method of MOTOMAN Touch! (In case downloading from Google Play is not available)...................... 6-193
6.17.7.2 Start-Up MOTOMAN Touch! Application................................................. 6-195
6.17.7.3 Setting of Call Center.................................................................................. 6-196
6.17.7.4 Registration of Customer Information...................................................... 6-197
6.17.7.5 Reading of Product Code.......................................................................... 6-198
6.17.7.6 Calling Up of the Product Code................................................................. 6-199
6.17.7.7 Inquiry Mail................................................................................................ 6-200
6.17.7.8 Sending Method of Controller Data.......................................................... 6-201
6.17.7.9 Attaching Method of Picture................................................................. 6-203
6.17.7.10 Sending an E-Mail: Transmission type
(QR code transmission only).............................................................................. 6-204
6.17.7.11 Sending an E-Mail: Transmission type
(QR code transfer and incoming call)............................................................... 6-205
6.17.7.12 Sending an E-Mail: Transmission type
(Call back request with QR code)...................................................................... 6-206

6.18 Time Measuring Function.................................................................................... 6-207
6.18.1 Time Measuring Function................................................................................ 6-207
6.18.2 Timer Variable................................................................................................. 6-207
6.18.3 Time Measuring Method................................................................................ 6-208
6.18.4 Setting for Time Measurement...................................................................... 6-210
6.18.5 Displaying the Time Measuring Result in the Job Window.......................... 6-211

7 External Memory Devices....................................................................................... 7-1
7.1 Memory Devices.................................................................................................... 7-1
7.1.1 Compact Flash (CF Cards)............................................................................... 7-2
7.1.1.1 Recommended Compact Flash Cards....................................................... 7-2
7.1.1.2 Notes on handling Compact Flash............................................................. 7-2
7.1.1.3 Inserting a Compact Flash......................................................................... 7-3
7.1.2 USB Memory Stick.......................................................................................... 7-4
7.1.2.1 Recommended USB Memory Stick........................................................... 7-4
7.1.2.2 Notes on handling USB Memory Stick..................................................... 7-4
7.1.2.3 Rules for USB Drive and USB Memory Stick.......................................... 7-5
7.1.2.4 Inserting a USB Memory Stick in the Programming Pendant.................. 7-6
7.1.2.5 Inserting a USB Memory Stick in the CPU Circuit Board
(JANCD-YCP21)...................................................................................................... 7-7

7.2 Handling Data.................................................................................................... 7-8
7.2.1 Data Classification........................................................................................... 7-8
7.2.2 File Existence.................................................................................................. 7-12
7.2.2.1 Saving by Overwriting.............................................................................. 7-13

7.3 Operation Flow.................................................................................................. 7-14
7.3.0.1 Operating a Folder...................................................................................... 7-15
7.3.0.2 Saving Data................................................................................................. 7-19
7.3.0.3 Loading Data............................................................................................... 7-30
7.3.0.4 Verifying Data............................................................................................. 7-39
7.3.0.5 Deleting Data ................................................................. 7-42
7.3.0.6 Job Selection Mode ..................................................... 7-45

8 Parameter ........................................................................... 8-1
  8.1 Parameter Configuration .................................................. 8-1
  8.2 Motion Speed Setting Parameters ..................................... 8-2
    8.2.0.1 S1CxG000: IN-GUARD SAFE OPERATION MAX. SPEED ..... 8-2
    8.2.0.2 S1CxG001: DRY-RUN SPEED ........................................... 8-2
    8.2.0.3 S1CxG002 to S1CxG009: JOINT SPEED FOR REGISTRATION ..... 8-2
    8.2.0.4 S1CxG010 to S1CxG017: LINEAR SPEED FOR REGISTRATION .... 8-3
    8.2.0.5 S1CxG018 to S1CxG025: POSITION ANGLE SPEED .......... 8-3
    8.2.0.6 S1CxG026 to S1CxG029: JOG OPERATION ABSOLUTE VALUE SPEED .......................... 8-3
    8.2.0.7 S1CxG030 to S1CxG032: INCHING MOVE AMOUNT ............. 8-4
    8.2.0.8 S1CxG033 to S1CxG040: POSITIONING ZONE ..................... 8-4
    8.2.0.9 S1CxG044: LOW-SPEED START ........................................ 8-6
    8.2.0.10 S1CxG045 to S1CxG048: JOG OPERATION LINK SPEED ........ 8-6
    8.2.0.11 S1CxG056: WORK HOME POSITION RETURN SPEED ........ 8-6
    8.2.0.12 S1CxG057: SEARCH MAX. SPEED .................................... 8-6

8.4.0.5 S2C067 to S2C194: CUBE USING METHOD

8.4.0.6 S3C000 to S3C047: CUBE SOFT LIMIT

8.4.0.7 S3C048 to S3C063: S-AXIS INTERFERENCE AREA

8.4.0.8 S3C064 to S3C1087: CUBIC INTERFERENCE AREA

8.4.0.9 S3C1089 to S3C1096: ROBOT INTERFERENCE AREA

8.4.0.10 S3C1097: A SIDE LENGTH OF WORK-HOME-POSITION CUBE

8.5 Parameters According to Status I/O

8.5.0.1 S2C235: USER OUTPUT RELAY WHEN CONTROL POWER IS ON

8.5.0.2 S4C000 to S4C015, S4C1100 to S4C1115: PARITY OF USER INPUT GROUPS

8.5.0.3 S4C016 to S4C031, S4C1116 to S4C1131: PARITY OF USER OUTPUT GROUPS

8.5.0.4 S4C032 to S4C047, S4C1132 to S4C1147: DATA OF USER INPUT GROUPS

8.5.0.5 S4C048 to S4C063, S4C1148 to S4C1163: DATA OF USER OUTPUT GROUPS

8.5.0.6 S4C064 to S4C079, S4C1164 to S4C1179: USER OUTPUT GROUP TO BE INITIALIZED AT SWITCHING MODE

8.5.0.7 S4C240: USER OUTPUT NO. WHEN MANIPULATOR DROP ALLOWABLE RANGE ERROR OCCURS

8.6 Parameters According to Coordinated or Synchronized Operation

8.6.0.1 S2C212: +MOV or +SMOV INSTRUCTION SPEED INPUT

8.6.0.2 S2C213: +MOV INSTRUCTION INTERPOLATION INPUT

8.6.0.3 S2C231: OPERATION METHOD AT FWD/BWD OPERATION OR TEST RUN BY INDEPENDENT CONTROL

8.6.0.4 S2C232: JOB AT CALLING MASTER OF SUBTASK BY INDEPENDENT CONTROL

8.6.0.5 S2C264: STATION AXIS CURRENT VALUE DISPLAY FUNCTION

8.6.0.6 S2C265 to S2C288: STATION AXIS DISPLAYED UNIT

8.6.0.7 S2C420: POSTURE CONTROL OF SYNCHRONIZED MANIPULATOR (When Twin Synchronous Function Used)

8.6.0.8 S2C421: POSTURE CONTROL OF MANIPULATOR IN MULTI-JOB (When Twin Synchronous Function Used)

8.6.0.9 S2C687: OPERATION OF JOB WITHOUT CONTROL GROUP SPECIFICATION

8.6.0.10 S2C688: EXECUTION OF “BWD” OPERATION

8.6.0.11 S3C1101: MAXIMUM DEVIATION ANGLE OF CURRENT STATION POSITION (When Twin Synchronous Function Used)

8.7 Parameters for Other Functions or Applications

8.7.0.1 S1CxG049 to S1CxG051: SMALL CIRCLE CUTTING
8.7.0.2 S1CxG052 to S1CxG053: SMALL CIRCLE CUTTING DIRECTION LIMIT VALUE ........................................................................................ 8-49
8.7.0.3 S1CxG054 to S1CxG055: SMALL CIRCLE CUTTING OVERLAP VALUE................................................................................................... 8-49
8.7.0.4 S1CxG063, S1CxG064: PATTERN CUTTING DIMENSION .............. 8-49
8.7.0.5 S1CxG065: MIRROR SHIFT SIGN INVERSION .................................. 8-49
8.7.0.6 S2C430: RELATIVE JOB OPERATION METHOD ............................... 8-49
8.7.0.7 S2C1135 : PROHIBIT WELDING SECTION SPEED OVERRIDE........ 8-50
8.7.0.8 S2C1137 : DISPLAY WELDING CONDITION FILE COMMENT ON THE JOB WINDOW FUNCTION .................................................... 8-50
8.7.0.9 S3C1111 to S3C1190: ANALOG OUTPUT FILTER CONSTANT ........ 8-50
8.7.0.10 S3C1191: CUT WIDTH CORRECTION VALU.................................... 8-50

8.8 Hardware Control Parameters......................................................................................... 8-51
8.8.0.1 S2C646: ANTICIPATOR FUNCTION.................................................... 8-51
8.8.0.2 S4C327 to S4C390: SETTING OF OPERATING RELAY NO. ............. 8-52
8.8.0.3 S4C391 to S4C454: OPERATING METHOD OF RELAYS ................. 8-52
8.8.0.4 S2C786 to S2C788: COOLING FAN ALARM DETECTION ................. 8-52
8.8.0.5 S2C1170 to S2C1171: COOLING FAN ALARM DETECTION ............... 8-52
8.8.0.6 S2C789 to S2C792: COOLING FAN ALARM 1 OPERATION.............. 8-53
8.8.0.7 S2C793 to S2C796: COOLING FAN ALARM 2 OPERATION.............. 8-53
8.8.0.8 S2C797 to S2C800: COOLING FAN ALARM 3 OPERATION.............. 8-53
8.8.0.9 S2C1174: COOLING FAN ALARM 4 OPERATION.............................. 8-53
8.8.0.10 S2C1175: COOLING FAN ALARM 5 OPERATION.............................. 8-53
8.8.0.11 S2C801 to S2C804: FAN ALARM 1 WELDER STATUS..................... 8-53
8.8.0.12 S2C805 to S2C808: FAN ALARM 2 WELDER STATUS..................... 8-53
8.8.0.13 S2C809 to S2C812: FAN ALARM 3 WELDER STATUS..................... 8-54
8.8.0.14 S2C1178: FAN ALARM 4 WELDER STATUS .................................... 8-54

8.9 TRANSMISSION PARAMETERS.................................................................................... 8-55

8.10 Application Parameters.................................................................................................. 8-55
8.10.1 Arc Welding ...................................................................................................... 8-55
8.10.1.1 AxP000: APPLICATION ...................................................................... 8-55
8.10.1.2 AxP003: WELDING ASSIGNMENT OF WELDING START CONDITION FILE................................................................. 8-55
8.10.1.3 AxP004: WELDING ASSIGNMENT OF WELDING END CONDITION FILES ........................................................................... 8-55
8.10.1.4 AxP005: WELDING SPEED PRIORITY.............................................. 8-55
8.10.1.5 AxP009: WORK CONTINUING........................................................... 8-55
8.10.1.6 AxP010: WELDING INSTRUCTION OUTPUT................................... 8-56
8.10.1.7 AxP011, AxP012: MANUAL WIRE OPERATION SPEED ................. 8-56
8.10.1.8 AxP013, AxP014: WELDING CONTROL TIME .............................. 8-56
8.10.1.9 AxP015 to AxP017: NUMBER OF WELDING CONTROL .............. 8-56
8.10.1.10 AxP026 to AxP029: TOOL ON/OFF USER OUTPUT NO. (Jigless system) .......................................................... 8-56

8.10.2 Handling Application ......................................................................................... 8-56
8.10.2.1 AxP002, AxP004: f1 KEY FUNCTION .............................................. 8-56
8.10.2.2 AxP003, AxP005: f2 KEY FUNCTION .............................................. 8-56

8.10.3 Spot Welding ..................................................................................................... 8-57

1 Introduction

1.1 DX200 Overview

The main power switch and the door lock are located on the front of the DX200 controller. The emergency stop button is installed in the upper right corner of the cabinet door and the programming pendant hangs from a hook below the button.

For information on setup, installation, and connection of the DX200 system, refer to the “DX200 INSTRUCTIONS”.

Fig. 1-1(a): DX200 Front View

Fig. 1-1(b): DX200 Front View (for Painting)
1.2 Programming Pendant

1.2.1 Programming Pendant Overview

The programming pendant is equipped with the keys and buttons used to conduct manipulator teaching operations and to edit jobs.

Fig. 1-2: PP Overview

![Programming Pendant Diagram]

- **Enable switch**: Located on the back of the programming pendant. When you lightly squeeze it, the power turns ON. When you firmly squeeze it, the power turns OFF.
- **Numeric keys / Function keys**: Press to input numbers. These keys are also used as function keys to input instructions, etc. Key’s function is automatically switched when function keys are available.
- **Motion Type key**
- **Enable switch (option)**
- **Cursor key**
- **Select key**

1 Introduction
1.2 Programming Pendant
1.2.2 Key Description

1.2.2.1 Character Keys / Symbol Keys

The keys which have character/symbol printed on them are denoted with \[ \]. For example, \[ \] is shown as \[ ENTER \].

The Numeric keys have additional functions along with their number values. Dual function keys are used in the context of the operation being performed. For example: \[ \] may be described in the text as \[ 1 \] or \[ TIMER \].

1.2.2.2 Axis Keys and Numeric Keys

The keys pictured in the following are referred to as the \[ Axis Key \] and \[ Numeric Key \] when described.

![Axis Keys and Numeric Keys](image)

1.2.2.3 Keys Pressed Simultaneously

When two keys are to be pressed simultaneously, the keys are shown with a "+" sign between them, such as \[ SHIFT \]+\[COORD \].
### 1.2.3 Programming Pendant Keys

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
</table>
| **[START]** | Starts the manipulator motion in playback operation.  
  - The lamp on this button is lit during the playback operation.  
  - The lamp also lights when the playback operation is started by the system input START signal.  
  - The lamp turns OFF when the playback operation is stopped by alarm occurrence, HOLD signal, or mode change. |
| **[HOLD]**   | Holds the manipulator motion.  
  - This button is enabled in any mode.  
  - The lamp on this button is lit only while the button is being pressed. Although the lamp turns OFF when the button is released, the manipulator stays stopped until a START command is input.  
  - The HOLD lamp automatically lights in the following cases to indicate that the system is in HOLD status. The start and axis operations are disabled while the lamp is lit.  
  1. The HOLD signal of system input is ON.  
  2. The HOLD request is being sent from an external device in remote mode.  
  3. In the HOLD status caused by an error occurred in working process such as wire sticking at arc welding. |
| **[E.STOP]** | Turns OFF the servo power.  
  - When the servo power is turned OFF, the SERVO ON LED on the programing pendant will extinguish.  
  - An emergency stop message is displayed on the screen. |
| **[MODE]**  | Selects the Play mode, Teach mode, or Remote mode.  
  - PLAY: Play Mode  
    The playback of taught job is enabled.  
    The START signal from an external device is disabled.  
  - TEACH: Teach Mode  
    The axis operation and edition from the programming pendant are enabled.  
    The START signal from an external device is disabled.  
  - REMOTE: Remote Mode  
    The operation by external signals is enabled.  
    [START] is invalid during the remote mode. |
# 1 Introduction

## 1.2 Programming Pendant

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable Switch</td>
<td>Turns ON the servo power. When the Enable Switch is lightly squeezed while the SERVO ON LED is blinking and the Mode Switch is set to “TEACH”, the power is turned ON. And when this switch is released or firmly squeezed while the power is turned ON, the power turns OFF.</td>
</tr>
<tr>
<td>[SELECT]</td>
<td>Works as described below. • Selects menu items in {Main Menu} area and the menu area. • Makes the selected item ready to be set in the general-purpose display area. • Displays multiple messages in the human interface display area.</td>
</tr>
<tr>
<td>Cursor</td>
<td>Moves the cursor in the direction of the arrow. • The size of the cursor and the range/place where the cursor can move will vary depending on the window. • If the UP cursor button is pressed when the cursor is on the first line, the cursor will move to the last line of the job. Conversely, if the cursor is on the last line of the job and the DOWN cursor button is pressed, the cursor will jump to the first line of the job. [SHIFT] + UP Scrolls the screen upward. [SHIFT] + DOWN Scrolls the screen downward. [SHIFT] + RIGHT Scrolls the screen to the right. [SHIFT] + LEFT Scrolls the screen to the left.</td>
</tr>
<tr>
<td>[MAIN MENU]</td>
<td>Displays {Main Menu}. If this key is pressed while {Main Menu} is displayed, {Main Menu} disappears. [MAIN MENU] + UP Increases the brightness of the screen. [MAIN MENU] + DOWN Decreases the brightness of the screen.</td>
</tr>
<tr>
<td>[SIMPLE MENU]</td>
<td>Displays the simple menu. If this key is pressed while the simple menu is displayed, the simple menu disappears. [SHIFT] + [SIMPLE MENU] Register the layout displayed in the general-purpose area to the user definition menu. Press [SIMPLE MENU] for three seconds to display the pop-up menu window.</td>
</tr>
</tbody>
</table>
[SERVO ON READY] Enables the servo power supply to be turned ON.
Press this key to enable the servo power supply to be turned ON if the servo power supply is shut OFF by the emergency stop or overrun signal.
When this key is pressed:
• In the play mode, the servo power supply is turned ON if the safeguarding is securely closed.
• In the teach mode, the SERVO ON lamp flashes and the servo power supply is turned ON when the Enable switch is ON.
• The SERVO ON lamp is lit while the servo power is ON.

[ASSIST] Displays the menu to assist the operation for the currently displayed window.
Pressing this key with [SHIFT] or [INTERLOCK] displays the help guidance for the operation.
• [SHIFT] + [ASSIST]
The function list of key combinations with [SHIFT] appears.
• [INTERLOCK] + [ASSIST]
The function list of key combinations with [INTERLOCK] appears.

[CANCEL] Cancels the current status.
• Deletes the sub menu in {Main Menu} area and the menu area.
• Cancels the input data or the input status in the general-purpose display area.
• Cancels the multiple views in the human interface display area.
• Cancels the occurred error.

[MULTI] Works for the multi mode.
If this button is pressed when the multi mode is ON, the active window switches.
[SHIFT] + [MULTI]
Switches between the multi-window display and the single-window display when the multi mode is ON.
1 Introduction
1.2 Programming Pendant

[COORD] Select the operation coordinate system when the manipulator is operated manually.
- The coordinates can be selected from the six coordinate systems, such as joint, cartesian, cylindrical, tool, user and teaching line. Each time this key is pressed, the coordinate system is switched in the following order:
  "JOINT" → "WLD/CYL" → "TOOL" → "USER" → "TEACHING LINE (only for arc welding purpose)"
- The selected coordinate system is displayed on the status display area.

[SHIFT] + [COORD]
The coordinate number can be changed when the "TOOL" or "USER" coordinate system is selected.

[DIRECT OPEN] Displays the content related to the current line.
- To display the content of a CALL job or condition file, move the cursor to the next line and press [DIRECT OPEN]. The file will be displayed for the selected line. Display content will vary depending on the type of instruction used in the job.
  Example:
  For a CALL instruction, the content of the called job will be displayed.
  For a work instruction, the content of the condition file will be displayed.
  For Input/output instructions, the input/output condition will be displayed.
- The lamp on this button is lit while the direct open is ON. Press this button while the lamp is lit to return to the previous window.

[PAGE] Displays the next page.
The page can be switched only when the lamp on this button is lit.
[SHIFT] + [PAGE]
Switches to the previous page.
1 Introduction
1.2 Programming Pendant

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>[AREA]</td>
<td>Moves the cursor in the following order: &quot;Menu Area&quot;→&quot;General-Purpose Display Area&quot;→&quot;Human Interface Display Area&quot;→&quot;Main Menu Area&quot;. If no item is displayed, the cursor does not move.</td>
</tr>
<tr>
<td></td>
<td>[SHIFT] + [AREA] The language can be switched when the bilingual function is valid. (Bilingual function is optional.)</td>
</tr>
<tr>
<td></td>
<td>[AREA] + DOWN Moves the cursor from the general-purpose display area to the operation button when the operation button is displayed.</td>
</tr>
<tr>
<td></td>
<td>[AREA] + UP Moves the cursor to the general-purpose display area when the cursor is on the operation button.</td>
</tr>
<tr>
<td>[SHIFT]</td>
<td>Changes the functions of other keys by pressing together. Can be used with [SIMPLE MENU], [ASSIST], [MULTI], [COORD], [AREA], [MOTION TYPE], [ROBOT], [EX. AXIS], the cursor or [Numeric Key] to access alternate functions. Refer to the description of each key for the alternate [SHIFT] functions.</td>
</tr>
<tr>
<td>[INTERLOCK]</td>
<td>Changes the functions of other keys by pressing together. Can be used with [ASSIST], [TEST START], [FWD], or [Numeric Key] (Numeric key customize function), [ROBOT]. Refer to the description of each key for the alternate [INTERLOCK] functions.</td>
</tr>
<tr>
<td>[INFORM LIST]</td>
<td>Displays instruction lists of commands available for job editing.</td>
</tr>
<tr>
<td>[ROBOT]</td>
<td>Enables the robot axis operation.</td>
</tr>
<tr>
<td></td>
<td>[ROBOT] is active for the system where multiple manipulators are controlled by one DX200 or the system with external axes.</td>
</tr>
<tr>
<td></td>
<td>[SHIFT] + [ROBOT] The robot under axis operation can be switched to a robot axis which is not registered to the currently selected job.</td>
</tr>
<tr>
<td></td>
<td>[INTERLOCK] + [ROBOT] Switches the application when several applications are set to a robot.</td>
</tr>
<tr>
<td>[EX. AXIS]</td>
<td>Enables the external axis (base axis or station axis) operation.</td>
</tr>
<tr>
<td></td>
<td>[EX.AXIS] is active for the system with external axes.</td>
</tr>
<tr>
<td></td>
<td>[SHIFT] + [EX. AXIS] The external axis under axis operation can be switched to an external axis which is not registered to the currently selected job.</td>
</tr>
</tbody>
</table>
1.2 Programming Pendant

[MOTION TYPE] Selects the interpolation type for playback operation. The selected interpolation type is shown in the status display area on the screen.

- Each time this key is pressed, the interpolation type changes in the following order:
  "MOVJ"→"MOVL"→"MOVC"→"MOVS"

[SHIFT] + [MOTION TYPE]
The interpolation mode changes in the following order:
"STANDARD"→"EXTERNAL REFERENCE POINT"→"CONVEYOR"

Interpolation type can be changed in any mode.

*: These modes are purchased options.

[TEST START] Moves the manipulator through taught steps in a continuous motion when [TEST START] and [INTERLOCK] are simultaneously pressed. The manipulator can be moved to check the path of taught steps. Operation stops immediately when this key is released.

- The manipulator operates according to the currently selected operation cycle: "AUTO", "1CYCLE", or "STEP".
- The manipulator operates at the taught speed. However, if the taught speed exceeds the maximum teaching speed, the operation proceeds at the maximum teaching speed.

[FWD] Moves the manipulator through the taught steps while this key is pressed.

- Only move instructions are executed (one instruction at a time, no welding instructions).

[INTERLOCK] + [FWD]
All instructions are executed.

[REFP] + [FWD]
Moves to the reference point of the cursor line. See chapter 3.3.1.3 “Moving to Reference Point” at page 3-27.

The manipulator operates at the selected manual speed. Make sure that the selected manual speed is the desired one before starting operation.

[BWD] Moves the manipulator through the taught steps in the reverse direction while this key is pressed.

- Only move instructions are executed (no weld commands).

The manipulator operates at the selected manual speed. Make sure that the selected manual speed is the desired one before starting operation.

## 1. Introduction

1.2 Programming Pendant

| [HIGH SPEED] | Makes the manipulator move at high speed while this button and one of the axis keys are pressed simultaneously during manual operation. No need to change the setting of speed.  
|              | • The speed for [HIGH SPEED] is specified in advance. |

| [Axis Key]  | Moves specified axes on manipulator.  
|            | • The manipulator axes only move while the key is pressed.  
|            | • Multiple axes can be operated simultaneously by pressing two or more keys at the same time. |

The manipulator operates in the selected coordinate system at the selected manual speed. Make sure that the selected coordinate system and the manual speed are the desired ones before starting the axis operation.

It is possible to allocate any external axes to [E-] + [E+], [8-] + [8+] keys to operate them. Refer to chapter 6.9 “Jog Key Allocation” at page 6-102.

| [Numeric Key] | Enters the number or symbol when the “>” prompt appears on the input line.  
|              | • “.” is the decimal point. “-” is a minus sign or hyphen. |

[Numeric Key] is also used as function keys. Refer to the explanation of each function for details.
1.2.4 Programming Pendant Display

The programming pendant display is a 5.7 inch color display. Alphanumeric characters can be used.

1.2.4.1 Five Display Areas

The general-purpose display area, menu area, human interface display area, and main menu area among the following five areas can be moved by pressing [AREA], or can be selected by directly touching the screen.

Each window displayed during operations is provided with its name on the upper left of the general-purpose display area.
1.2.4.2 General-purpose Display Area

On the general-purpose display area, various settings and contents such as jobs and characteristics files can be displayed and edited.

Displays also can be switched by scrolling the window, moving the cursor and switching pages.

- Scrolling the window

If the display content is oversized in the general-purpose display area, the display area can be resized by scrolling the window.

Follow the procedure below to scroll the window.

- Scrolling the window using the cursor:
  Refer to chapter 1.2.3 "Programming Pendant Keys" at page 1-4.

- Scrolling the window by touch operation:
  While touching the general-purpose display area, move it up and down or sideways, and release the touch.

(ex.) Touch the job window and slide it upwards (Scrolling towards the lower part of the window).
Moving the cursor

The cursor may be displayed on some windows. Follow the procedure below to move the cursor position.

- Moving the cursor using the cursor:
  Refer to chapter 1.2.3 “Programming Pendant Keys” at page 1-4.

- Moving the cursor by touch operation:
  Touch the position available for cursor moving in the general-purpose display area, and release the touch.

When the cursor by touch operation in the job window is moved, it is necessary to perform the following operations. (Operations can be switched by parameters.)

1. Press [INTERLOCK] + Touch operation
2. Touch operation + Confirming dialog
3. Cannot move the cursor by touch operation.

(1) Press [INTERLOCK] + method of touch operation
1. Set the cursor moving specification (S2C1204) to 0 by touch operation on the job window.
2. While pressing [interlock], touch the position available for cursor moving on the job window.
(2) Touch operation + method of confirmation dialog

1. Set the cursor moving specification (S2C1204) to 1 by touch operation on the job window.
2. Touch the position available for cursor moving on the job window.
3. Select “YES” for the cursor moving confirmation dialog box.

- Page switching

When the [PAGE] lamp light is ON, the pages can be switched. Follow the procedure below to switch the pages:

- Page switching by [PAGE]:
  Refer to chapter 1.2.3 “Programming Pendant Keys” at page 1-4.

- Displaying the next page by touch operation:
  While touching the general-purpose display area, move it to the left side, and release the touch.

- Displaying the previous page by touch operation:
  While touching the general-purpose display area, move it to the right side, and release the touch.
1 Introduction
1.2 Programming Pendant

- **Operation buttons**

On some windows, the operation button appears.

The operation process can be executed by pressing [SELECT] or by touching operation.

To move the cursor from the general-purpose area to the operation button, press [AREA] + [↓] cursor.

To move the cursor to the general-purpose display area from the operation button, press [AREA] + [↑] cursor or press [CANCEL].

For the operation in the operation button area, use [←] or [→] and press [SELECT].

- **EXECUTE**: Continues operation displayed in the general-purpose area with the displayed contents.
- **CANCEL**: Cancels the contents in the general-purpose area and returns to the previous window.
- **COMPLETE**: Completes the setting operation displayed on the general-purpose display area.
- **STOP**: Stops operation when loading, saving, or verifying with an external memory device.
- **RELEASE**: Releases the overrun and shock sensor function.
- **RESET**: Resets an alarm. (Cannot reset major alarms.)
- **PAGE**: On the page that can be switched by specifying the page number, directly input the desired page number and press [ENTER].

- On the page where a list is selected, select a desired page number on the list by pressing [↓] or [↑], and then press [ENTER].
• To disable touching operation in the general-purpose display area, change the parameter S2C1203 (Touch operation function specifications in the general-purpose area). Refer to chapter 8.3.0.49 “S2C1203: TOUCH OPERATION FUNCTION IN GENERAL-PURPOSE DISPLAY AREA” at page 8-31.

• To switch the cursor moving method by touch operation on the job window, change the parameter S2C1204 (Cursor moving specifications by touch operation on the job window). Refer to chapter 8.3.0.50 “S2C1204: CURSOR MOVEMENT FUNCTION BY TOUCH OPERATION ON JOB WINDOW” at page 8-31.
1.2.4.3 Main Menu Area

Each menu and submenu are displayed in {Main Menu} area. Press [MAIN MENU] or touch {Main Menu} on the left bottom of the window to display {Main Menu}.

![Main Menu Area Diagram]

1.2.4.4 Status Display Area

The Status Display area shows controller status. The displayed information will vary depending on the controller mode (Play/Teach).

![Status Display Area Diagram]

**A. Control Group**

Displays the active control group for systems equipped with station axes or several robot axes.

- to : Robot Axes
- to : Base Axes
- to : Station Axes

**A. Group operation axis**

- B. Operation coordinate system
- C. Manual speed
- D. Security mode
- E. Operation cycle

**I. Page**

- F. State under execution
- G. Mode
- H. Tool number
- J. Multi Mode
- K. Weak battery
- L. Touch operation disable
- M. Saving Data
1 Introduction
1.2 Programming Pendant

B. Operation Coordinate System
Displays the selected coordinate system. Switched by pressing [COORD].

- Joint Coordinates
- Cartesian Coordinates
- Cylindrical Coordinates
- Tool Coordinates
- User Coordinates
- Teaching Line Coordinates (arc welding purpose)

C. Manual Speed
Displays the selected speed. For details, refer to chapter 2.2.0.5 “Select Manual Speed” at page 2-4.

- Inching
- Low Speed
- Medium Speed
- High Speed

D. Security Mode

- Operation Mode
- Edit Mode
- Management Mode
- Safety Mode
- One Time Manage Mode

E. Operation Cycle
Displays the present operation cycle.

- Step
- Cycle
- Continuous
1 Introduction
1.2 Programming Pendant

**F. State Under Execution**
Displays the present system status (STOP, HOLD, ESTOP, ALARM, or RUN).

- : Stop Status
- : Hold Status
- : Emergency Stop Status
- : Alarm Status
- : Operating Status

**G. Mode**

- : Teach mode
- : Play mode

**H. Tool Number**

From : Displayed the tool No. which is chosen by a robot when the tool No. switch function is valid. (S2C431=1).

**I. Page**

: Displayed when the page can be switched.

**J. Multi Mode**

: Displayed when the multi window mode is set.

**K. Weak Battery of Memory**

: Displayed when the battery of memory is weak.

**L. Touch Panel Operation Disable**

: Displayed the touch panel operation is disabled.

: Displayed when the battery of memory is weak and the touch panel operation is disabled.

**M. Saving Data**

: Displayed while saving the data.
1 Introduction
1.2 Programming Pendant

1.2.4.5 Human Interface Display Area

An error(s) or a message(s) is displayed in the human interface display area.

When an error is displayed, operations cannot be performed until the error is canceled. Press [CANCEL] to allow for operations.

When two or more errors occur, appears in the message display area. Activate the message display area and press [SELECT] to view the list of current errors.

To close the error list, select "CLOSE" or press [CANCEL].

1.2.4.6 Menu Area

The menu area is used to edit a job, manage jobs, and execute various utilities.
1.2.5 Screen Descriptions

- The menu displayed in the programming pendant is denoted with { }.

The above menu items are denoted with {DATA}, {EDIT}, {DISPLAY}, AND {UTILITY}.

- The window can be displayed according to the view desired.

**Full Window View**

**Upper Window View**

**Middle Window View**

**Lower Window View**
1.2.6 Character Input Operation

Move the cursor to the data for which characters are to be input, and press [SELECT] to display the software keypad.

1.2.6.1 Character Input

To input characters, the software keypad is shown on the programming pendant display.

There are three types of software keypads: the alphanumeric keypads each for upper-case and lower-case characters and the symbol keypad. To switch between the alphanumeric keypads and the symbol keypad, touch the button tab on the screen or press [PAGE]. To switch the alphanumeric keypads between upper-case and lower-case characters, touch “CapsLock OFF” or “CapsLock ON”.

1.2.6.2 Operation

<table>

</tbody>
</table>
1 Introduction
1.2 Programming Pendant

1.2.6.3 Alphanumeric Input

Number input is performed with the [Numeric Key] or on the following alphanumeric input window. Numbers include 0 to 9, the decimal point (.), and the minus sign/hyphen (-).

Note however, that the decimal point cannot be used in job names.
Press the [PAGE] to display the alphanumeric input window. Move the cursor to the desired letter and press [SELECT] to enter the letter.

For Numbers and Upper-case Characters

For Numbers and Lower-case Characters
1 Introduction
1.2 Programming Pendant

1.2.6.4 Symbol Input

Press the [PAGE] to display the symbol input window.
Move the cursor to the desired symbol and press [SELECT] to enter the symbol.
Note that only some symbols are available for naming jobs.

*For Symbols*

![Symbol Input Window]

When the focus is in a text field of [Result], it is able to move a cursor position by pressing [Shift]+[→] or [Shift]+[←].
1.2.6.5 Register Word Function

This function enables to use the registered word when input a character by registering the word (character string) in advance. To use this function simplifies to input the same character strings. It is able to register the 32 words of eight characters.

There is a limit to enter the character by input contents. If a registered word includes a limited character, it is unable to use the word.

e.g. Unable to use the lower case characters, a decimal point and symbols to the job name.

Select {SET WORD} from {SETUP} in {Main Menu}.

- Register word window is displayed
- The registered words are displayed in the word area.
- If there is not any registered word, unable to select [Name order], [Delete] and [Delete All] in the button area.
1.2 Programming Pendant

**Word Registration**

It is able to register the 32 words of eight characters. Register a word by selecting [REGISTER WORD] button while the word editing is valid (S2C410=1) during using the keyboard, or register the word in the word register screen.

*Example*: Register the word "TEST".
- Select (KEYBOARD).
- Enter "TEST" by using the keyboard, and select "Regist".
- The dialog box appears.

"TEST" Word registration succeeded.
1 Introduction
1.2 Programming Pendant

Select [REGISTER WORD].

- The word area appears.
- Confirm that \{TEST\} is in the word area.

- **Back Space**
  Delete the last character of the input character string.
  Select (Back space) in the word register screen.
  - Delete the last character of the input character string.

- **Cancel**
  Cancel the input character string.
  Select (Cance) in the word register screen.
  - Cancel the character string if there is a character string is input.
  - End the word register screen if there is not any character string.
Use of Words

- The word area is displayed.

- There is a limit to enter the character by input contents. If a registered word includes a limited character, it is unable to use the word.
  - e.g. Unable to use the lower case characters, a decimal point and symbols to the job name.

Select (KEYBORD).

Move the focus to “1” by the programming pendant, and press [Select].
1 Introduction
1.2 Programming Pendant

- The "1" is added after "TEST" is displayed in the {Result}.

While "TEST1" is displayed in the {Result}, select {Regist}.
The dial box, which says '{TEST1} Word registration succeeded.' appears, and the registration is completed.
1. Introduction
1.2 Programming Pendant

- Change the Arrangement of the Words to Display
  Able to change the arrangement of the words to display.

1. Name order display
Select {Name Order} in the button area.
  - Displayed by the name order of the words.
  - {Name Order} button changes to {Register order} button.

2. Register order display
Select {Register order} in the button area.
  - Displayed by the register order of the words.
  - {Register order} button changes to {Name Order} button.
Delete the Word

Able to delete the registered words.

Delete the words while the word editing is valid (S2C410=1) during using the keyboard, or delete the word in the word register screen.

e.g. Delete registered word “TEST”.

Select (REGISTER WORD).
The word area appears.

Select “TEST” in the word area, and select (Delete) in the button area.

→ The dialog box, which asks “TEST Do you delete a word?”, appears.

Select “Yes”.

“TEST” in the word area is deleted.
Delete All Words
Able to delete all registered words.
Delete while the word editing is valid (S2C410=1) during using the keyboard, or delete the word in the word register screen.

- Delete all registered words.
  Select {Delete All} in the button area.
  - The dialog box, which asks “Do you delete all words?”, appears.

Select “Yes”.
  - The all words are deleted.
1.2.7 Bilingual Function

When the bilingual function (optional) is enabled, two languages can be displayed alternately by ONE-TOUCH operation.

1. Press [SHIFT] + [AREA]

English and Japanese can be switched each time the [AREA] and the [SHIFT] are pressed simultaneously.

The two languages cannot be displayed alternately in the following conditions.

- During character or number input operations, and when a confirmation dialog is on the window.
- During axis operation, next-back or test mode in the teach mode.

Use alphanumeric characters (single byte) for items registered by users, such as job names and comments.

Non-alphanumeric characters cannot be displayed correctly in languages other than Japanese and English.
1.3 Mode

The following three modes are available for DX200.

- Teach Mode
- Play Mode
- Remote Mode

1.3.1 Teach Mode

In the teach mode, the following can be done.

- Preparation and teaching of a job
- Modification of a registered job
- Setting of various characteristic files and parameters

1.3.2 Play Mode

In the play mode, the following can be done.

- Playback of a taught job
- Setting, modification, or deletion of various condition files

1.3.3 Remote Mode

In the remote mode, the operations such as Servo ON Ready, Start, Cycle Change, Call Master Job can be commanded by external input signals.

The operations by external input signals become enabled in the remote mode, while [START] on the programming pendant becomes disabled.

The data transmission function (optional function) is also available in the remote mode.

The following table shows how each operation is input in each mode.

<table>
<thead>
<tr>
<th>Operation</th>
<th>Mode</th>
<th>Teach Mode</th>
<th>Play Mode</th>
<th>Remote Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Servo ON Ready</td>
<td>PP</td>
<td>PP</td>

<td></td>
<td>External input signal</td>
</tr>
<tr>
<td>Call Master Job</td>
<td>PP</td>
<td>PP</td>
<td></td>
<td>External input signal</td>
</tr>
</tbody>
</table>

Note: “PP” indicates the programming pendant.

1.3.4 Teach Mode Priority

In the teach mode, following operations are disabled:

1. Playback using [START].
2. Playback from external input signals.
1.4 Security Mode

1.4.1 Types of Security Modes

The following three types of security modes are available for DX200.

Any operation in the edit mode and the management mode requires a password. The password must contain between 4 and 8 letters, numbers, or symbols.

- **Operation Mode**
  The operator can monitor the line operation and start and stop the manipulator. Repairs, etc. can be performed if any abnormalities are detected.

- **Edit Mode**
  Teaching, robot jog operations, and editing of jobs and various condition files can be performed in addition to the operations enabled in the operation mode.

- **Management Mode**
  The operator who performs setup and maintenance for the system can set the machine control parameter, set the time, change the password, etc. in addition to the operations enabled in the edit mode.

- **Safety Mode**
  The operator who performs the safety management of the system can edit the safety functional relevant files in addition to the operations enabled in the management mode. When the functional safety function which is an optional function is enabled, the security is changed to the safety mode in which files such as tool files can be edited. For the details of the safety mode, refer to “DX200 OPTIONS INSTRUCTIONS FOR FUNCTIONAL SAFETY BOARD OPERATION”.

- **One Time Manage Mode**
  Maintenance operations in higher security mode than management mode can be performed. The one time security code provided by Yaskawa is required to input.
  Restriction of the loading of the batch data (CMOS.BIN)/parameter batch (ALL.PRM)/function definition parameter (FD.PRM) is released in addition to the operations enabled in the safety mode.

Inputting of the password is required when operating in the edit, management and safety mode.

For the password of edit and management modes, 4 or more to less than 16 of characters/numbers should be specified, and 9 or more to less than 16 of characters/numbers are required to the safety mode password.

1 Displayed in the teach mode only.
2 Displayed in the play mode only.
3 Displays only when the Job undelete function is enabled.

Note: For the operation methods when the functional safety function is enabled, refer to “DX200 OPTIONS INSTRUCTIONS FOR FUNCTIONAL SAFETY BOARD OPERATION”.

1-40
1.4.2 Changing Security Mode

1. Select {SYSTEM INFO} under {Main Menu}.
   - The sub menu appears.

2. Select {SECURITY}.
   - The SECURITY window appears
   - The security mode can be selected from operation mode, edit mode, management mode, or safety mode.
3. Select the desired security mode.
   - When the selected security mode is higher than the currently set mode, the Password input status window appears.

4. Input the password as required.
   - At the factory, the password number is preset as follows:
     Edit Mode: [0000000000000000]
     Management Mode: [9999999999999999]
     Safety Mode: [5555555555555555]

5. Press [ENTER].
   - The security mode is changed to when the input password is correct.
Follow the procedures below when changing the security to the one time manage mode.

1. Change the security to the management mode.
   - Selection of the mode is available among "OPERATION MODE", "EDITING MODE", "MANAGEMENT MODE", "SAFETY MODE", and "ONE TIME MANAGE MODE" when the mode is changed to the management mode.

2. Select "ONE TIME MANAGE MODE".

3. A key pad for character input is displayed. Input the one time security code provided by Yaskawa.

4. The security mode is changed to the one time manage mode when the input security code is correct.
2 Manipulator Coordinate Systems and Operations

2.1 Control Groups and Coordinate Systems

2.1.1 Control Group

For the DX200, a group of axes to be controlled at a time is called “Control Group”, and the group is classified into three units: “ROBOT” as a manipulator itself, “BASE” that moves the manipulator in parallel, and “STATION” as jigs or tools other than “ROBOT” and “BASE”. BASE and STATION are also called external axes.
2.1.2 Types of Coordinate Systems

The following coordinate systems can be used to operate the manipulator:

- **Joint Coordinates**
  Each axis of the manipulator moves independently.

- **Cartesian Coordinates**
  The tool tip of the manipulator moves parallel to any of the X-, Y-, and Z-axes.

- **Cylindrical Coordinates**
  The $\theta$ axis moves around the S-axis. The R-axis moves parallel to the L-axis arm. For vertical motion, the tool tip of the manipulator moves parallel to the Z-axis.

- **Tool Coordinates**
  The effective direction of the tool mounted in the wrist flange of the manipulator is defined as the Z-axis. This axis controls the coordinates of the end point of the tool.

- **User Coordinates**
  The XYZ-cartesian coordinates are defined at any point and angle. The tool tip of the manipulator moves parallel to the axes of them.

- **Teaching Line Coordinates**
  The XYZ-Cartesian coordinates will be set from two steps and the Z-axis direction of the robot coordinates. The tool tip of the manipulator moves parallel to the coordinates. They can be used only for an arc welding purpose.
2.2 General Operations

2.2.0.1 Check Safety

Before any operation of the DX200, read Section 1 “Safety” of “DX200 INSTRUCTIONS” again and keep safe around the robot system or peripherals.

2.2.0.2 Select Teach Mode

Set the mode switch on the programming pendant to “teach”.

2.2.0.3 Select Control Group

If the DX200 has several Control Groups or Coordinate Control Systems (optional function), select control group first.

If two or more ROBOT, BASE, STATION are registered, switch control group by pressing [SHIFT] + [ROBOT] or [SHIFT] + [EX. AXIS].

After selecting a job, the control group registered in the selected job is enabled. The control group registered in the edit job can be switched by pressing [ROBOT] or [EX. AXIS].

Check the selected control group at the status display area on the programming pendant.

2.2.0.4 Select Coordinate System

Select a coordinate system by pressing [COORD].

Each time [COORD] is pressed, the coordinate system switches in the following order:

Joint → Cartesian (Cylindrical) → Tool → User → Teaching Line (only for arc welding purpose).

Check the selected coordinate on the status display area on the programming pendant.
2.2.0.5 Select Manual Speed

Select manual speed of operation by pressing [FAST] or [SLOW]. The selected speed is effective not only for axis operation but [FWD] or [BWD] operation.

- Each time [FAST] is pressed, the speed switches in the order of "INCH"→"SLOW"→"MED"→"FAST".
- Each time [SLOW] is pressed, the speed switches in the order of "FAST"→"MED"→"SLOW"→"INCH".

Check selected manual speed on the status area of Programming Pendant.

2.2.0.6 Servo ON

Press [SERVO ON READY], then SERVO ON LED starts blinking. Squeeze the Enable switch, then SERVO ON LED starts lighting.

2.2.0.7 Axis Operation

Make sure of safety around the manipulator. Press [Axis Key] then axis moves according to the selected control group, coordinates, and manual speed. See chapter 2.3 "Coordinate Systems and Axis Operation" at page 2-5.

2.2.0.8 HIGH SPEED

Press [HIGH SPEED] while pressing [Axis Key] to make the manipulator move faster than the usual speed.

- The [HIGH SPEED] is disabled when "INCH" is selected for the manual speed.

NOTE

In operating the manipulator manually by the programming pendant, the maximum speed of center point is limited at 250 mm/s.
2.3 Coordinate Systems and Axis Operation

2.3.1 Joint Coordinates

When operating in joint coordinates mode, the S, L, U, R, B, and T-axes of the manipulator move independently. The motion of each axis is described in the table below.

Table 2-1: Axis Motion in Joint Coordinates

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Major Axes</td>
<td></td>
<td></td>
</tr>
<tr>
<td>S-axis</td>
<td><img src="image" alt="S-" /> <img src="image" alt="S+" /></td>
<td>Main unit rotates right and left.</td>
</tr>
<tr>
<td>L-axis</td>
<td><img src="image" alt="L-" /> <img src="image" alt="L+" /></td>
<td>Lower arm moves forward and backward.</td>
</tr>
<tr>
<td>U-axis</td>
<td><img src="image" alt="U-" /> <img src="image" alt="U+" /></td>
<td>Upper arm moves up and down.</td>
</tr>
<tr>
<td>Wrist Axes</td>
<td></td>
<td></td>
</tr>
<tr>
<td>R-axis</td>
<td><img src="image" alt="R-" /> <img src="image" alt="R+" /></td>
<td>Wrist rolls right and left.</td>
</tr>
<tr>
<td>B-axis</td>
<td><img src="image" alt="B-" /> <img src="image" alt="B+" /></td>
<td>Wrist moves up and down.</td>
</tr>
<tr>
<td>T-axis</td>
<td><img src="image" alt="T-" /> <img src="image" alt="T+" /></td>
<td>Wrist turns right and left.</td>
</tr>
<tr>
<td>E-axis</td>
<td><img src="image" alt="E-" /> <img src="image" alt="E+" /></td>
<td>Lower arm turns right and left.</td>
</tr>
</tbody>
</table>

- When two or more Axis Keys are pressed at the same time, the manipulator will perform a compound movement. However, if two different directional keys (such as [S -] + [S +]) for the same axis are pressed at the same time, the axis will not operate. (When [S -] + [S +] + [L +] are pressed, only the axis corresponding to [L +] will operate.)
When "ALL AXES ANGLE DISPLAY FUNCTION" is enabled, \{ABSO. ANGLE\} or \{GROUND ANGLE\} appears on the CURRENT POSITION window.

In case \{ABSO. ANGLE\} or \{GROUND ANGLE\} is selected at CURRENT POSITION COORDINATE, directions of L-axis, R-axis and T-axis angle differ from the pulse display.

When operating in joint coordinates mode, check the movement direction and pay great attention to perform the operation.

For details, refer to chapter 8.3.0.47 "S2C684:ALL AXES ANGLE DISPLAY FUNCTION".

<table>
<thead>
<tr>
<th>CURRENT POSITION COORDINATE PULSE</th>

<td>B 51.0078 deg.</td>
</tr>
<tr>
<td>T 50000</td>
<td>T -109.9495 deg.</td>
</tr>
</tbody>
</table>
2.3.2 Cartesian Coordinates

In the cartesian coordinates, the manipulator moves parallel to the X-, Y-, or Z-axes. The motion of each axis is described in the table below.

Table 2-2: Axis Motion in Cartesian Coordinates

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>X-axis</td>
<td>$X_{-}$, $X_{+}$</td>
<td>Moves parallel to X-axis.</td>

<tr>
<td>Y-axis</td>
<td>$Y_{-}$, $Y_{+}$</td>
<td>Moves parallel to Y-axis.</td>
</tr>
<tr>
<td>Z-axis</td>
<td>$Z_{-}$, $Z_{+}$</td>
<td>Moves parallel to Z-axis.</td>
</tr>
</tbody>
</table>

Wrist Axes: Motion about TCP is executed. See chapter 2.3.7 “Control Point Operation” at page 2-17.

• When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [X -] + [X +]) for the same axis are pressed at the same time, the axis will not operate.
  (When [X -] + [X +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)
2.3.3 Cylindrical Coordinates

In the cylindrical coordinates, the manipulator moves as follows. The motion of each axis is described in the table below.

Table 2.3: Axis Motion in Cylindrical Coordinates

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Axes</td>
<td></td>
<td></td>

<td>Moves perpendicular to Z-axis.</td>
</tr>
<tr>
<td>Z-axis U-</td>
<td>Z-</td>
<td>Moves parallel to Z-axis.</td>
</tr>
<tr>
<td>Wrist Axes</td>
<td>Motion about TCP is executed. See chapter 2.3.7 “Control Point Operation” at page 2-17.</td>
<td></td>
</tr>
</tbody>
</table>

- When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [Z -] + [Z +]) for the same axis are pressed at the same time, the axis will not operate.
  (When [Z -] + [Z +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)
2 Manipulator Coordinate Systems and Operations

2.3 Coordinate Systems and Axis Operation

Fig. 2-3: Rolls around q-axis

Fig. 2-4: Moves perpendicular to r-axis
2.3.4 Tool Coordinates

In the tool coordinates, the manipulator moves parallel to the X-, Y-, and Z-axes, which are defined at the tip of the tool. The motion of each axis is described in the table below.

Table 2-4: Axis Motion in Tool Coordinates

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Axes</td>
<td></td>
<td></td>
</tr>
<tr>
<td>X-axis</td>
<td><img src="#" alt="X-" /> <img src="#" alt="X+" /></td>
<td>Moves parallel to X-axis.</td>
</tr>
<tr>
<td>Y-axis</td>
<td><img src="#" alt="Y-" /> <img src="#" alt="Y+" /></td>
<td>Moves parallel to Y-axis.</td>
</tr>
<tr>
<td>Z-axis</td>
<td><img src="#" alt="Z-" /> <img src="#" alt="Z+" /></td>
<td>Moves parallel to Z-axis.</td>
</tr>
<tr>
<td>Wrist Axes</td>
<td></td>
<td>Motion about TCP is executed. See chapter 2.3.7 “Control Point Operation” at page 2-17.</td>
</tr>
</tbody>
</table>

* When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [X -] + [X +]) for the same axis are pressed at the same time, the axis will not operate. (When [X -] + [X +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)

The tool coordinates are defined at the tip of the tool, assuming that the effective direction of the tool mounted on the manipulator wrist flange is the Z-axis. Therefore, the tool coordinates axis direction moves with the wrist.

In the tool coordinates motion, the manipulator can be moved using the effective tool direction as a reference regardless of the manipulator position or orientation. These motions are best suited when the manipulator is required to move parallel while maintaining the tool orientation with the workpieces.
For tool coordinates, the tool file should be registered in advance. For further details, refer to “8.3 Tool Data Setting” of coordinates “DX200 INSTRUCTIONS” (RE-CTO-A220).
2.3.4.1 Selecting Tool

Tool numbers are used to specify a tool when more than one tool is used on the system.

You may select from the registered tool files when you switch tools on the manipulator.

This operation can be performed only when the number of tool is more than one.
To use several tool files with one manipulator, set the following parameter.
S2C431: Tool number switch specifying parameter
1: Can be switched
0: Cannot be switched

1. Press the [COORD] and select the tool coordinates.

   – Each time [COORD] is pressed, the coordinate system switches in the following order:
     Joint → Cartesian (Cylindrical) → Tool → User → Teaching Line (only for arc welding purpose).
     Check the change on the status display area.

2. Press [SHIFT] + [COORD].

   – The TOOL NO. SELECT window appears.

3. Move the cursor to the tool to use.

   – The TOOL NO. SELECT window above shows an example; “TOOL NO. 0 TORCH MT-3501” is selected.

4. Press [SHIFT] + [COORD].

   – The window goes back to the previous window.
2.3.5 User Coordinates

In the user coordinates, the manipulator moves parallel to each axis of the coordinates which are set by the user. Up to 24 coordinate types can be registered. Each coordinate has a user number and is called a user coordinate file.

The figure and the table below describe the motion of each axis when the [Axis Key] is pressed.

**Table 2-5: Axis Motion in User Coordinates**

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Axes</td>
<td></td>
<td></td>

<td>Moves parallel to Z-axis.</td>
</tr>
<tr>
<td>Wrist Axes</td>
<td>Motion about TCP is executed. See chapter 2.3.7 “Control Point Operation” at page 2-17.</td>
<td></td>
</tr>
</tbody>
</table>

- When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [X -] + [X +]) for the same axis are pressed at the same time, the axis will not operate.
  (When [X -] + [X +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)
Fig. 2-5: Moves parallel to X or Y-axis

Fig. 2-6: Moves parallel to Z-axis
2.3.5.1 Selecting User Coordinates

Follow these procedures to select the desired coordinate system from among the registered user coordinates.

1. Press [COORD] to select the user coordinates.
   - Each time [COORD] is pressed, the coordinate system switches in the following order:
     Joint → Cartesian (Cylindrical) → Tool → User.
     Check the change on the status display area.

2. Press [SHIFT] + [COORD].
   - The USER COORD SELECT window appears.

For more information on registration of the user coordinates, refer to "8.8 User Coordinate Setting" of "DX200 INSTRUCTIONS" (RE-CTO-A220).

3. Select the desired user number.
2.3.5.2 Examples of User Coordinate Utilization

The user coordinate settings allow easy teaching in various situations. For example:

- When multiple positioners are used, manual operation can be simplified by setting the user coordinates for each fixture.

- When performing arranging or stacking operations, the incremental value for shift can be easily programmed by setting user coordinates on a pallet.

- When performing conveyor tracking operations, the moving direction of the conveyor is specified.

2.3.6 External Axis

The external axis can be operated by selecting "BASE" or "STATION" for the control group. The motion of each axis is described in the table below.
2.3 Coordinate Systems and Axis Operation

2.3.7 Control Point Operation

Motion about TCP (Tool Center Point) can only change the wrist orientation at a fixed TCP position in all coordinate systems except the joint coordinates. The motion of each axis is described in the table below.

**Table 2-6: Axis Motion in Motion about TCP**

<table>
<thead>
<tr>
<th>Axis Name</th>
<th>Axis Operation Key</th>
<th>Motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Major Axes</td>
<td><img src="image" alt="Axis Operation Key" /></td>
<td>TCP moves. These movements differ depending on cartesian, cylindrical, tool and user coordinates.</td>
</tr>
<tr>
<td>Wrist Axes</td>
<td><img src="image" alt="Axis Operation Key" /></td>
<td>Wrist axes move with the TCP fixed. These movements differ depending on cartesian, cylindrical, tool and user coordinates.</td>
</tr>
<tr>
<td>E-axis</td>
<td><img src="image" alt="Axis Operation Key" /></td>
<td><em>Available only for the manipulator with seven axes. The posture of arm changes while the position and posture of the tool remain fixed. (The Re degree changes.)</em></td>
</tr>
</tbody>
</table>

- When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [X -] + [X +]) for the same axis are pressed at the same time, the axis will not operate. (When [X -] + [X +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)
Re is an element to indicate the posture of the manipulator with seven axes and does not change by the specified coordinates.

The definition of Re is shown below.
Turning of each wrist axis differs in each coordinate system.

- In cartesian or cylindrical coordinates, wrist axis rotations are based on the X-, Y-, or Z-axis.

- In tool coordinates, wrist axis rotations are based on X-, Y-, or Z-axis of the tool coordinates.
• In user coordinates, wrist axis rotations are based on X-, Y-, or Z-axis of the user coordinates.

2.3.7.1 Control Point Change

The tool tip position (TCP) is the target point of axis operations and is set as the distance from the flange face. The control point change operation is an axis operation that involves selecting a tool from the list of registered tools (Refer to chapter 2.3.4.1 “Selecting Tool” at page 2-12), and then manipulating the axes while changing the TCP. This can be performed with all coordinates except the joint coordinates. The axis operation is the same as that of the motion about TCP.

<Example 1> TCP Change Operation with Multiple Tools

1. Set the TCPs for Tool 1 and Tool 2 as P1 and P2, respectively.
2. When Tool 1 is selected to perform an axis operation, P1 (Tool 1’s TCP) is the target point of the operation. Tool 2 follows Tool 1 and is not controlled by the axis operation.
3. On the other hand, When Tool 2 is selected to perform an axis operation, P2 (Tool 2’s TCP) is the target point of the axis operation. In this case, Tool 1 just follows Tool 2.

Fig. 2-9: Selection of Tool 1 and axis operations with controlling P1 Fig. 2-10: Selection of Tool 2 and axis operations with controlling P2
*Example 2* TCP Change Operation with a Single Tool

1. Set the two corners of the workpiece that the tool is holding as TCP P1 and P2 respectively.

2. By selecting two TCPs alternately, the workpiece can be moved as shown below:

   *Fig. 2-11: Motion about TCP with P1 selected*

   ![Diagram of motion about TCP with P1 selected](image1)

   *Fig. 2-12: Motion about TCP with P2 selected*

   ![Diagram of motion about TCP with P2 selected](image2)

For registration of the tool file, refer to “8.3 Tool Data Setting” of “DX200 INSTRUCTIONS” (RE-CTO-A220).
### 2.3.8 Teaching Line Coordinates

The teaching line coordinates is the coordinates that are set from the two successive steps and the Z-axis direction of the robot coordinates. They can be used only for the arc welding purpose.

<table>
<thead>
<tr>
<th>Each axis of the teaching line coordinates system</th>

<td>Tool posture changes around Gy-axis with the TCP fixed.</td>
</tr>
<tr>
<td></td>
<td>[SHIFT]+[z-], [SHIFT]+[z+]</td>
<td>Tool posture changes around Z-axis of tool coordinates with the TCP fixed.</td>
</tr>
</tbody>
</table>

**SUPPLEMENT**

- When two or more [Axis Key]s are pressed at the same time, the manipulator will perform compound movement. However, if two different directional keys (such as [X -] + [X +]) for the same axis are pressed at the same time, the axis will not operate. (When [X -] + [X +] + [Y +] are pressed, only the axis corresponding to [Y +] will operate.)
In steps for circular interpolation or spline interpolation, perform manual operation after performing FWD, BWD or test operations.
In the following operations and cases, manual operation for teaching line coordinate is limited.

**Table 2-8: Limited Manual Operation for Teaching Line Coordinate**

2.3.8.2 Display Welding-related Information

1. Torch angle (-90.000 ~ 90.000)
   - **CURRENT**: Degree of torch angle of current teaching line coordinates
   - **COMMAND**: Target position of moving operation to torch angle/travel angle

2. Travel angle (-90.000 ~ 90.000)
   - **CURRENT**: Degree of travel angle of current teaching line coordinates
   - **COMMAND**: Target position of moving operation to torch angle/travel angle

3. Downward angle (-90.000 ~ 90.000)
   - **CURRENT**: Current downward angle
     - The angle that is subtracted by 90 degrees from the angle of Z-axis of the base coordinates and X-axis of the teaching line coordinates.

In the following operations and cases, INFORMATION RELATED ARC is not displayed:

- Selecting a job
- Editing a job
- Moving the cursor
- The cursor is at the 1st step.
- The current step and the previous step are the same position, or the distance between these steps are short.
- The move instruction of current step is MOVJ.
- The move instruction of current step is IMOV.
- Motion direction is the same as the Z-axis of base coordinate.
Switching Welding-related Information Display

Able to switch a state of ARC INFORMATION display to hide or show.

1. Select the {JOB} under {Main Menu}.
2. Select {JOB CONTENT}.
   – Job content window appears.
3. Select {DISPLAY} in the menu area.
   – A pull-down menu appears.
4. Select {ARC INFORMATION}.
   – Welding-related information is displayed.
2 Manipulator Coordinate Systems and Operations
2.3 Coordinate Systems and Axis Operation

### Moving Operation to Torch Angle/Travel Angle

Able to move the manipulator to the torch angle/travel angle which are specified to the COMMAND (target position) in the ARC INFORMATION.

1. Display the ARC INFORMATION.
2. Touch the ARC INFORMATION.
   - The arc information becomes active.
3. Select a data input area of the torch angle or travel angle.
4. Input numeric value by [Numeric Key].
5. Press [ENTER].
   - The COMMAND is set.
6. Press [NEXT].

– The confirmation dialog box appears to confirm to move the manipulator to the torch angle/travel angle.

7. Press [YES].

– The confirmation dialog box disappears.
– When the arc information is active, the confirmation dialog doesn’t appear again.

8. By pressing [NEXT] again, the manipulator moves to the target position.

– The manipulator stops when the manipulator arrives to the target position.
– The manipulator stops when [NEXT] is released.

**NOTE**

In the multi-window mode, moving operation to the torch angle/travel angle is unavailable. If [NEXT] is pressed when the cursor is on a move instruction, the next motion of the move instruction is operated.
3 Teaching

3.1 Preparation for Teaching

To ensure safety, the following operations should always be performed before teaching:

• Check the emergency stop buttons to be sure they function properly.
• Set the mode switch to “TEACH”.

Then,

• Register a job.

3.1.1 Checking Emergency Stop Buttons

The Servo ON button on the programming pendant should be lit while the power is ON for the servo system. Perform the following operation to ensure that the emergency stop buttons on both the DX200 and the programming pendant are functioning correctly before operating the manipulator.

1. Press E. STOP button.
   - Press the emergency stop button on the DX200 or the programming pendant.
2. Confirm the servo power is turned OFF.
   - The SERVO ON button on the programming pendant lights while servo supply is turned ON.
   - When the emergency stop button is pressed and the servo power is turned OFF, the SERVO ON lamp will turn OFF.
   - After confirming correct operation, press [SERVO ON READY]. The servo power will be ready to turn ON.
   - The servo power can be turned ON while the SERVO ON button lamp blinks.

3.1.2 Setting the Teach Lock

For safety purposes, always set the mode switch to “TEACH” before beginning to teach.

While the teach lock is set, the mode of operation is tied to the teach mode and the machines cannot be played back using either [START] or external input.
3.1.3 Registering a Job

Specify the name, comments (as required), and control group to register a job.

3.1.3.1 Registering Job Names

Job names can use up to 32 alphanumeric and symbol characters. These different types of characters can coexist within the same job name.

The following rules apply to the designation of job names:

- A maximum of 32 characters can be used for a job name.
- If the job name is already used, an input error is caused.

<Example>

```plaintext
JOB - 1 WORK - A
```

3.1.3.2 Registering Jobs

1. Select {JOB} under {Main Menu}.
   - The sub-menu appears.

2. Select {CREATE NEW JOB}.
   - The NEW JOB CREATE window appears.
3. Input job name.
   – Move the cursor to JOB NAME, and press [SELECT]. Input job names using the character input operation. For information on character input operation, refer to chapter 1.2.6 “Character Input Operation” at page 1-23.

4. Press [ENTER].

3.1.3.3 Registering Comments

Register a comment using up to 32 alphanumeric and symbol characters as required.

1. Enter a comment.
   – In the NEW JOB CREATE window, move the cursor to the comment and press [SELECT]. For information on character input operation, refer to chapter 1.2.6 “Character Input Operation” at page 1-23.

2. Press [ENTER].

3.1.3.4 Registering Control Groups

Select the control group that has been registered in advance. If external axes (BASE or STATION) or multiple robot systems are not used, the registration of control groups is not required.
3 Teaching
3.1 Preparation for Teaching

3.1.3.5 Switching to the Teaching Window

After the name, comments (can be omitted), and the control groups have been registered, switch the window to the teaching window as follows.

1. In the NEW JOB CREATE window, press [ENTER] or select “EXECUTE”.
   - Job name, comments, and control groups are all registered. Then, the JOB CONTENT window appears. NOP and END instructions are automatically registered.

![Image of Job Content Window]
3 Teaching

3.2 Teaching Operation

3.2.1 Teaching Window

Teaching is conducted in the JOB CONTENT window. The JOB CONTENT window contains the following items:

A. Line Numbers
   The number of the job line is automatically displayed. Line numbers are automatically updated if lines are inserted or deleted.

B. Cursor
   The cursor for manipulator control. For the FWD, BWD, and test operation, the manipulator motion starts from the line this cursor points.

C. Instructions, Additional Items, Comments, Etc.

   MOVJ  VJ = 50.00
   
   Instructions : These are instructions needed to process or perform an operation. In the case of MOVE instructions, the instruction corresponding to the interpolation type is automatically displayed at the time position is taught.

   Additional items : Speed and time are set depending on the type of instruction. When needed, numerical or character data is added to the condition-setting tags.
3.2 Teaching Operation

3.2.2 Interpolation Type and Play Speed

Interpolation type determines the path along which the manipulator moves between playback steps. Play speed is the rate at which the manipulator moves.

Normally, the position data, interpolation type, and play speed are registered together for a robot axis step. If the interpolation type or play speed settings are omitted during teaching, the data used from the previously taught step is automatically used.

3.2.2.1 Joint Interpolation

The joint interpolation is used when the manipulator does not need to move in a specific path toward the next step position. When the joint interpolation is used for teaching a robot axis, the move instruction is MOVJ. For safety purposes, use the joint interpolation to teach the first step.

When [MOTION TYPE] is pressed, the move instruction on the input buffer line changes.

<Play Speed Setting Window>

- Speeds are indicated as percentages of the maximum rate.
- Setting "0:Speed Omit" sets the same speed as the previous determination.

1. Move the cursor to the play speed.
2. Set the play speed by pressing [SHIFT] + the cursor.
   - The joint speed value increases or decreases.

<table>
<thead>
<tr>

<td>3.12</td>
</tr>
<tr>
<td></td>
<td>1.56</td>
</tr>
<tr>
<td>Slow</td>
<td>0.78</td>
</tr>
</tbody>
</table>
3.2 Teaching Operation

3.2.2 Linear Interpolation

The manipulator moves in a linear path from one taught step to the next. When the linear interpolation is used to teach a robot axis, the move instruction is MOVL. Linear interpolation is used for work such as welding. The manipulator moves automatically changing the wrist position as shown in the figure below.

<Play Speed Setting Window (same for circular and spline interpolation)>

- There are two types of displays, and they can be switched depending on the application.

1. Move the cursor to the play speed.
2. Set the play speed by pressing [SHIFT] + the cursor.
   - The play speed value increases or decreases.

<table>
<thead>

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

105 of 704
3.2 Teaching Operation

3.2.2.3 Circular Interpolation

The manipulator moves in an arc that passes through three points. When circular interpolation is used for teaching a robot axis, the move instruction is MOVC.

- **Single Circular Arc**

  When a single circular movement is required, teach the circular interpolation for three points, P1 to P3, as shown in the following figure. If joint or linear interpolation is taught at P0, the point before starting the circular operation, the manipulator moves from P0 to P1 in a straight line.

  Table 3-1: Interpolation Type for Single Circular Arc

<table>
<thead>
<tr>
<th>Point</th>
<th>Interpolation Type</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>P0</td>
<td>Joint or Linear</td>
<td>MOVJ, MOVL</td>
</tr>
<tr>
<td>P1</td>
<td>Circular</td>
<td>MOVC</td>
</tr>
<tr>
<td>P4</td>
<td>Joint or Linear</td>
<td>MOVJ, MOVL</td>
</tr>
</tbody>
</table>

- **Continuous Circular Arcs**

  When two or more successive circular movements with different curvatures are required, the two circular movements can be continued by adding "FPT" tag to the step whose curvature is needed to be changed.

  Table 3-2: Interpolation Type for Continuous Circular Arcs

<table>
<thead>
<tr>
<th>Point</th>
<th>Interpolation Type</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>P0</td>
<td>Joint or Linear</td>
<td>MOVJ, MOVL</td>
</tr>
<tr>
<td>P1</td>
<td>Circular</td>
<td>MOVC</td>
</tr>
<tr>
<td>P3</td>
<td>Circular</td>
<td>MOVC, FPT</td>
</tr>
<tr>
<td>P4</td>
<td>Circular</td>
<td>MOVC</td>
</tr>
<tr>
<td>P6</td>
<td>Joint or Linear</td>
<td>MOVJ, MOVL</td>
</tr>
</tbody>
</table>

In case the "FPT" tag is not added, two or more successive circular movements must be separated from each other. Thus, as shown in P4 of the following figure, the linear interpolation step or the joint must be inserted at an identical point in which the end point of the preceding circular movement coincide with the beginning point of the following circular movement.

However, if the step at the identical point is taught, the continuous movements cannot be performed.
3.2 Teaching Operation

<Play Speed>

- The play speed set display is identical to that for the linear interpolation.
- The speed taught at P2 is applied from P1 to P2. The speed taught at P3 is applied from P2 to P3.
- If a circular operation is taught at high speed, the actual arc path has a shorter radius than that taught.

3.2.2.4 Spline Interpolation

When performing operations such as welding, cutting, and applying primer, using the spline interpolation makes teaching for workpieces with irregular shapes easier. The path of motion is a parabola passing through three points. When spline interpolation is used for teaching a robot axis, the move instruction is MOVS.

- **Single Spline Curve**

  When a single spline curve movement is required, teach the spline interpolation for three points, P1 to P3, as shown in the figure below. If joint or linear interpolation is taught at point P0, the point before starting the spline interpolation, the manipulator moves from P0 to P1 in a straight line.

<table>
<thead>
<tr>
<th>Point Type</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>P0 Joint</td>
<td>MOVJ</td>
</tr>
<tr>
<td>P1 Linear</td>
<td>MOVL</td>
</tr>
<tr>
<td>P2</td>
<td></td>
</tr>
<tr>
<td>P3</td>
<td></td>
</tr>
<tr>
<td>P4 Joint</td>
<td>MOVJ</td>
</tr>
<tr>
<td>P5 Linear</td>
<td>MOVL</td>
</tr>
<tr>
<td>P6</td>
<td></td>
</tr>
<tr>
<td>P7</td>
<td></td>
</tr>
<tr>
<td>P8 Joint</td>
<td>MOVJ</td>
</tr>
<tr>
<td>P9 Linear</td>
<td>MOVL</td>
</tr>
</tbody>
</table>

Table 3-3: Interpolation Type for Single Spline Curve

- **Automatically becomes a straight line.**
3.2 Teaching Operation

Continuous Spline Curves

The manipulator moves through a path created by combining parabolic curves. This differs from the circular interpolation in that steps with identical points are not required at the junction between two spline curves.

Table 3-4: Interpolation Type for Continuous Spline Curves

<table>
<thead>
<tr>
<th>Point</th>
<th>Interpolation Type</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>P0</td>
<td>Joint or Linear</td>
<td>MOVJ</td>
</tr>
<tr>
<td>P1 to P5</td>
<td>Spline</td>
<td>MOVS</td>
</tr>
<tr>
<td>P6</td>
<td>Joint or Linear</td>
<td>MOVJ</td>
</tr>
</tbody>
</table>

When the parabolas overlap, a composite motion path is created.

<Play Speed>

- The play speed setting window is identical to that for the linear interpolation.
- As with the circular interpolation, the speed taught at P2 is applied from P1 to P2, and the speed taught at P3 is applied from P2 to P3.

Teach points so that the distances between the three points are roughly equal. If there is any significant difference, an error will occur on playback and the manipulator may operate in an unexpected, dangerous manner. Ensure that the ratio of distances between steps m:n is within the range of 0.25 to 0.75.

NOTE
3.2.3 Teaching Steps

3.2.3.1 Registering Move Instructions

Whenever one step is taught, one move instruction is registered. There are two ways to teach a step. Steps can be taught in sequence as shown in the following left figure fig. 3-1 “Registering Move Instructions” or they can be done by inserting steps between already registered steps, as shown in the right figure fig. 3-2 “Inserting Move Instructions.”

This paragraph explains the teaching of fig. 3-1 “Registering Move Instructions”, the operations involved in registering new steps.

Teaching of fig. 3-2 “Inserting Move Instructions” is called “Inserting move instruction”, to distinguish it from the method shown in fig. 3-1 “Registering Move Instructions”. For more details on this operation, see chapter 3.4.2 “Inserting Move Instructions” at page 3-34. The basic operations for registration and insertion are the same. The only difference is pressing [INSERT] in the case of insertion. For registration (fig. 3-1 “Registering Move Instructions”), the instruction is always registered before the END instruction. Therefore, it is not necessary to press [INSERT]. For insertion (fig. 3-2 “Inserting Move Instructions”), [INSERT] must be pressed.

Fig. 3-1: Registering Move Instructions  
Fig. 3-2: Inserting Move Instructions
3. Teaching
3.2 Teaching Operation

### Setting the Position Data

1. Select {JOB} under {Main Menu}.
   - The sub-menu appears.

2. Select {JOB}.
   - The contents of the currently-selected job is displayed.

3. Move the cursor on the line immediately before the position where a move instruction to be registered.

4. Grip the Enable switch.
   - Grip the Enable switch to turn the servo power ON.

5. Move the manipulator to the desired position using [Axis Key].
   - Use [Axis Key] to move the manipulator to the desired position.
3.2 Teaching Operation

**Selecting the Tool Number**
1. Press [SHIFT] + [COORD].
   - When selecting the “JOINT”, “XYZ/CYLINDRICAL”, or “TOOL” coordinates, press [SHIFT] + [COORD] and the TOOL NO. SELECT window will be shown.
   - Move the cursor to the desired tool number.
     - The currently-selected tool number by the cursor is displayed.
2. Press [SHIFT] + [COORD].
   - The JOB CONTENT window appears.

**Setting the Interpolation Type**
1. Press [MOTION TYPE].
2. Select the desired interpolation type.
   - When [MOTION TYPE] is pressed, MOVJ→MOVL→MOVC→MOVS are displayed in order in the input buffer line.
3.2 Teaching Operation

**Setting the Play Speed**

1. Move the cursor to the instruction.

   ```
   0000 LDP
   0001 JOINTS:0.01
   0002 END
   ```

2. Press [SELECT].
   - The cursor moves to the input buffer line.
   ```
   MOV 0.01
   ```

3. Move the cursor to the play speed to be set.
   ```
   MOV 0.1
   ```

4. Press [SHIFT] + the cursor `[↑]` or `[↓]` simultaneously.
   - The joint speed moves up and down.
   ```
   MOV 0.01
   ```

5. Press [ENTER].
   - The MOV instruction is registered.
   ```
   0000 WIP
   0001 JOINTS:0.01
   0002 END
   ```

Follow the above instructions when conducting teaching. (Tool number, interpolation type, or play speed does not need to be set if it is same as the previous step.)

- **SUPPLEMENT**
  To make the setting so that the play speed tag is not displayed as a default, select {EDIT} from the menu and then select "ENABLE SPEED TAG" to delete "*".

- **SUPPLEMENT**
  - The position level can be set at the same time that the move instruction is registered.
  - To display the position level tag as a default, select {EDIT} from the menu and then select "ENABLE POS LEVEL TAG".

**Position Level**: The position level is the degree of approximation of the manipulator to a taught position.
The position level can be added to move instructions MOVJ (joint interpolation) and MOVL (linear interpolation).
If the position level is not set, the precision depends on the operation speed. Setting an appropriate level moves the manipulator in a path suitable to circumferential conditions and the workpiece.
3 Teaching

3.2 Teaching Operation

The relationship between path and accuracy for position levels is as follows.

<table>
<thead>
<tr>
<th>Position Levels</th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Teaching position</td>
</tr>
<tr>
<td>1 to 8</td>
<td>Fine Rough</td>
</tr>
</tbody>
</table>

- **Setting the Position Level**

1. Select move instruction.
   - The DETAIL EDIT window appears.

2. Select the position level "UNUSED".
   - The selection dialog box appears.
3. Select “PL”.
   - The position level is displayed. The position initial value is 1.

4. Press [ENTER].
   - To change the position level, select the level in the input buffer line, type the value using [Numeric Key], and press [ENTER]. The position level’s move instruction is registered.

5. Press [ENTER].
For example, to perform the movement steps shown below, set as follows:

Steps P2, P4, and P5 are simple passing points, and do not require accurate positioning. Adding PL=1 to 8 to the move instructions of these steps moves the manipulator around the inner corners, thereby reducing the cycle time.

If complete positioning is necessary as P3 or P6, add PL=0.

<EXAMPLE>

Passing points P2, P4, and P5:

\[ \text{MOVL V=138 PL=3} \]

Positioning point P3 and P6:

\[ \text{MOVL V=138 PL=0} \]
3.2.3.2 Registering Reference Point Instructions

Reference point instructions (REFP) set an auxiliary point such as a wall point for weaving. Reference point Nos. 1 to 8 are assigned for each application. Follow these procedures to register reference point instructions.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Move the cursor.
   - Move the cursor to the line immediately before the position where the reference point to be registered.
4. Grip the Enable switch.
   - The servo power is turned ON.
5. Press [Axis Key].
   - Move the manipulator to the position to be registered as the reference point.
6. Press [REFP] or select “REFP” from the inform list.
   - The reference point instruction is displayed in the input buffer line.
7. Change the reference point number in one of the following ways.
   - Move the cursor to the reference point number, and press [SHIFT] + the cursor to change the reference point number; or
   - Press [SELECT] when the cursor is on the reference point number. Then, the data input buffer line appears. Input the number and press [ENTER].
8. Press [INSERT].
   - The [INSERT] lamp lights.
   - When registering before the END instruction, pressing [INSERT] is not needed.
9. Press [ENTER].
   - The REFP instruction is registered.

The programming pendant does not have the [REFP] for the application of spot welding, motor gun, and of material handling, assembling, and cutting.
3.2.3.3 Registering Timer Instructions

The timer instruction stops the manipulator for a specified time. Follow these procedures to register timer instructions.

1. Select (JOB) under (Main Menu).
2. Select (JOB).
3. Move the cursor.
   - Move the cursor to one line before the position where the timer instruction is to be registered.

4. Press [TIMER].
   - The TIMER instruction is displayed on the input buffer line.

5. Change the timer value.
   - Move the cursor to the timer value and change it by pressing [SHIFT] + the cursor. The timer unit of adjustment is 0.01 seconds.
   - If [Numeric Key]s are used for inputting the timer value, press [SELECT] when the cursor is on the timer value. The data input line appears. Input the value and press [ENTER].

6. Press [INSERT].
   - The [INSERT] lamp lights.
   - When registering before the END instruction, pressing [INSERT] is not needed.

7. Press [ENTER].
   - The TIMER instruction is registered.
3.2 Teaching Operation

Changing Timer Value

1. Press [TIMER].

2. Press [SELECT].

   – The DETAIL EDIT window for the TIMER instruction appears.

   ![Timer DETAIL EDIT window]

3. Input the timer value on the instruction DETAIL EDIT window.

   (1) When ✔️ is selected, the items available to be changed are displayed in the dialog box.

   ![Timer DETAIL EDIT window with checked items]

   (2) Select the particular item to be changed.

   – When a number is to be changed, move the cursor to the number and press [SELECT]. Input the desired value using the [Numeric Key]s, and press [ENTER].

   ![Timer DETAIL EDIT window with edited value]

4. Press [ENTER].

   – The DETAIL EDIT window is closed and the JOB CONTENT window appears again. Modified content is displayed in the input buffer line.
3. Teaching

3.2 Teaching Operation

5. Press [INSERT].
   – The [INSERT] lamp lights.
   – When registering before the END instruction, pressing [INSERT] is not needed.

6. Press [ENTER].
   – The TIMER instruction is registered.
### 3.2.4 Overlapping the First and Last Steps

Why is overlapping the first and last step necessary?

Assume that the job shown below is to be repeated. The manipulator moves from the last step (Step 6) to the first step (Step 1). If Step 6 and Step 1 are the same position, the manipulator moves directly Step 5 to Step 1, thereby improving work efficiency.

1. Move the cursor to the first step line.
2. Press [FWD].
   - The manipulator moves to the first step position.
3. Move the cursor to the last step line.
   - The cursor starts blinking.
   - When the cursor line position and the manipulator position are different in the JOB CONTENT window, the cursor blinks.
4. Press [MODIFY].
   - The key lamp lights.
5. Press [ENTER].
   - The position data for the first step is registered on the line of the last step.
   - At this time, only the position data can be changed in the last step. Interpolation type and play speed do not change.
3.3 Checking Steps

3.3.1 [FWD/BWD] Operations

Check whether the position of the taught steps is appropriate using [FWD] or [BWD] on the programming pendant. Each time [FWD] or [BWD] is pressed, the manipulator moves by a single step.

[FWD]: Moves the manipulator ahead in step number sequence. Only the move instruction is executed when [FWD] is pressed.

[INTERLOCK] + [FWD]: All instructions are executed alternately.

[BWD]: Moves the manipulator backward a step at a time in reverse step number sequence. Only the move instruction is executed.

1. Move the cursor to the step to be checked.
2. Press [FWD] or [BWD].
   – The manipulator reaches the following / previous step and stops.

NOTE For safety, set manual speed at  or below.

With using parameters, the movement at [FWD] operation can be set.

Refer to chapter 8.3.0.4 “S2C198: EXECUTION UNITS AT "FORWARD" OPERATION” at page 8-12 and chapter 8.3.0.5 “S2C199: INSTRUCTION (EXCEPT FOR MOVE) EXECUTION AT "FORWARD" OPERATION” at page 8-13.
3.3.1 Precautions When Using FWD / BWD Operations

- **FWD Movements**
  - The manipulator moves in step number sequence. Only move instructions are executed when [FWD] is pressed. To execute all instructions, press [INTERLOCK] + [FWD].
  - The manipulator stops after playing a single cycle. It does not move after the END instruction is reached, even if [FWD] is pressed. However, at the end of a called job, the manipulator moves the instruction next to the CALL instruction.

- **BWD Movements**
  - The manipulator moves in reverse step number sequence. Only move instructions are executed.
  - The manipulator does not move after the first step is reached, even if [BWD] is pressed. However, at the beginning of a called job, the manipulator moves to the instruction immediately before the CALL instruction.

- **Circular Movements with [FWD/BWD] Operations**
  - The manipulator moves in a straight line to the first step of the circular interpolation.
  - There must be three circular interpolation steps in a row to move the manipulator in an arc.
  - If [FWD] or [BWD] operation is restarted after being stopped to move the cursor or to perform search, the manipulator moves in a straight line to the next step.
  - If [FWD] or [BWD] operation is restarted after being stopped to move the axis as shown below, the manipulator moves in a straight line to P2, the next circular interpolation. Circular motion is restored from P2 to P3.
3.3 Checking Steps

**Spline Curve Movements with FWD/BWD Operations**

- The manipulator moves in a straight line to the first step of spline interpolation.

- There must be three spline curve motion steps in a row to perform a spline curve operation.

- Depending on the position where the [FWD] / [BWD] operation is performed, the alarm "IRREGULAR DISTANCES BETWEEN TEACHING POINTS" may occur.

Note that FWD/BWD inching operations change the path of the manipulator and caution is therefore required. Performing these operations also increases the likelihood that the "IRREGULAR DISTANCES BETWEEN TEACHING POINTS" will occur.

- If the [FWD] or [BWD] operation is restarted after being stopped to move the cursor or perform a search, the manipulator moves in a straight line to the next step.

- If the [FWD] or [BWD] operation is restarted after being stopped to move the axis as shown below, the manipulator moves in a straight line to P2, the next spline curve motion step. Spline curve motion is restored from P2 onward. However, the path followed between P2 and P3 is somewhat different from the path followed at playback.

- If the manipulator is moved to P3 with [FWD], stopped, and then returned to P2 with [BWD], the path followed between P2 and P3 is different for each of the following: the first FWD operation, the BWD operation, and the consequent FWD operation.
3.3 Checking Steps

3.3.1.2 Selecting Manual Speed

When [FWD] or [BWD] is pressed, the manipulator moves at the manual speed selected at that time. Selected manual speed can be checked by the manual speed indication on the programming pendant.

Manual speed is set with [FAST] and [SLOW]. FWD operation can be performed at a high speed by pressing [HIGH SPEED]. Follow these procedures to select a manual speed.

- Each time [FAST] is pressed, the speed switches in the order of "INCH"→"SLOW"→"MED"→"FAST".

- Each time [SLOW] is pressed, the speed switches in the order of "FAST"→"MED"→"SLOW"→"INCH".

**NOTE**

- FWD/BWD operation is performed with SLW speed even if INCH is selected.
- [HIGH SPEED] is available only for the FWD operation but not for BWD operation.
3.3 Checking Steps

3.3.1.3 Moving to Reference Point

To check the position of a taught reference point, follow these procedures to move the manipulator to the reference point.

1. Move the cursor to the reference point instruction line to be checked.
2. Press [REFP] + [FWD].
   – The manipulator moves to the reference point of the cursor line.

3.3.1.4 Test Operations

Playback operations can be simulated in the teach mode with test operations. This function is convenient for checking continuous paths and operation instructions.

Test operation differs in the following ways from actual playback in the play mode.

- Operation speeds greater than the maximum teaching speed are reduced to the maximum teaching speed.
- Work instruction output, such as arc output, is not executed.

Note that the motion path for the playback operation is replayed during the test operation. Therefore, make sure that there is no obstacle around the manipulator and great caution should be exercised when the test operation is performed.

There may be a slight difference between the motion path for the test operation and the motion path for the playback operation due to a mechanical error or control delay, etc.
3.3 Checking Steps

Test operation is performed by pressing [INTERLOCK] and [TEST START]. For safety purposes, these keys will only function while the keys are held down.

1. Select {JOB} under {Main Menu}.
2. Press {JOB}.
   – The test operation JOB CONTENT window appears.
3. Press [INTERLOCK] + [TEST START].
   – The manipulator starts the test cycle operation.
   – However, after the operation starts, the motion continues even if [INTERLOCK] is released.
   – The manipulator moves only while these keys are held down.
   – The manipulator stops immediately when [TEST START] is released.

3.3.1.5 Machine Lock Operation

When “MACHINE LOCK” is enabled, the [FWD] / [BWD] operation or the test operation can be performed to check the status of input and output without moving the manipulator.

1. Press [AREA].
2. Select {UTILITY}.
3. Select {SETUP SPECIAL RUN}.
   – The SPECIAL TEACH window appears.
4. Select “MACHINE LOCK”.
   – Press [SELECT] to switch “VALID” and “INVALID”.

   **NOTE**
   Always check safety conditions before pressing [INTERLOCK] + [TEST START] to start the manipulator in motion.

   **NOTE**
   • The setting of “MACHINE LOCK” is maintained even after the mode is switched: If the machine lock is set to “VALID” in the teach mode, it is still “VALID” after switching to the play mode. The same applies when the mode is switched from the play mode to the teach mode.
   • Note that the machine lock becomes “INVALID” if the following operation is performed.
     • Execution of “CANCEL ALL SELECT” in the SPECIAL PLAY window.
     • Turning off the main power.
3.4 Modifying Steps

Begin move instruction insertion.

Move step cursor to location where you want to insert the instruction.

Perform axis operations.

Set interpolation type.

Set play speed.

Set position level when necessary.

Press [INSERT].

Press [ENTER].

Insertion completed.

Begin move instruction deletion.

Move cursor to location of instruction to be deleted.

Press [DELETE].

Press [ENTER].

Deletion completed.
3.4 Modifying Steps

NOTE
It is not possible to change a move instruction to a reference point instruction and vice versa.
3 Teaching
3.4 Modifying Steps

Begin REFP instruction modification.

**Deletions**

Move step cursor to the REFP instruction to be deleted, and move the manipulator to the position.

Press [DELETE].

Press [ENTER].

Deletion completed.

**Modifications**

Move step cursor to the REFP instruction to be modified.

Perform axis operations.

Press [REFP].

Press [MODIFY].

Press [ENTER].

Modification completed.
Begin TIMER Instruction Modification.

Deletions

Move edit cursor to the TIMER instruction to be deleted.
Press [DELETE].
Press [ENTER].
Deletion completed.

Modifications

Move edit cursor to the TIMER instruction to be modified.
Press [TIMER].
Enter timer value.
Press [MODIFY].
Press [ENTER].
Modification completed.
3.4 Modifying Steps

3.4.1 Displaying the JOB CONTENT Window for Editing

3.4.1.1 Currently Called Up Job

1. Select (JOB) under (Main Menu).
2. Select (JOB).
   – The JOB CONTENT window appears.

3.4.1.2 Calling Up Other Jobs

In any other than the teach mode, set the mode switch to “TEACH”.

1. Select (JOB) under (Main Menu).
2. Select (SELECT JOB).
   – The JOB LIST window appears.
3. Select the job name to be called.
### 3.4.2 Inserting Move Instructions

**NOTE** Move instructions cannot be inserted when the servo power is OFF.

1. Move the cursor to the line immediately before the insert position.

   The line immediately before where the move instruction is to be added:

<table>
<thead>
<tr>
<th>Step where move instruction is to be inserted</th>
</tr>
</thead>
<tbody>
<tr>
<td>0006 MOV L V=276</td>
</tr>
<tr>
<td>0007 TIMER T=1.00</td>
</tr>
<tr>
<td>0008 DOUT OT#(1) ON</td>
</tr>
<tr>
<td>0009 MOV J VJ=100.0</td>
</tr>
</tbody>
</table>

2. Press [Axis Key].

   - Turn ON the servo power and press [Axis Key] to move the manipulator to the position to be inserted.

**NOTE** Confirm the move instruction on the input buffer line and set desired interpolation type and play speed.

3. Press [INSERT].

   - The key lamp will light.

**NOTE** When the inserting position is immediately before the END instruction, pressing [INSERT] is not needed.

4. Press [ENTER].

   - The move instruction is inserted after the cursor line.

   The move instruction is added:

<table>
<thead>
<tr>
<th>The move instruction is added.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0006 MOV L V=276</td>
</tr>
<tr>
<td>0007 TIMER T=1.00</td>
</tr>
<tr>
<td>0008 DOUT OT#(1) ON</td>
</tr>
<tr>
<td>0009 MOV L V=558</td>
</tr>
<tr>
<td>0010 MOV J VJ=100.0</td>
</tr>
</tbody>
</table>

5. Press [ENTER].

   - <Examples of Inserting a Move Instruction>
     - When a move instruction is inserted in the following job, it is placed on different lines according to the setting in the
3 Teaching
3.4 Modifying Steps

TEACHING CONDITION window.

Before inserting the move instruction

After the insertion: when inserting before the next step

After the insertion: when inserting after the cursor line

Positions where the move instructions are inserted.

The default location for insertions is "before the next step", but it is also possible to insert "after the cursor line". This setting is made in the "Move Instruction Register Method" in the TEACHING CONDITION window.
3.4 Modifying Steps

3.4.3 Deleting Move Instructions

1. Move the cursor to the move instruction to be deleted.

2. Press [DELETE].
– The key lamp will blink.

3. Press [ENTER].
– The step indicated by cursor line is deleted.

NOTE
If the manipulator position differs from the cursor position on the window, the cursor blinks. Stop the blinking by either of the following procedures.

1. Press [FWD] and move the manipulator to the position where the move instruction is to be deleted.
2. Press [MODIFY] → [ENTER] to change the position data of the blinking cursor position to the current manipulator position.
3.4.4 Modifying Move Instructions

3.4.4.1 Modifying Position Data

1. Move the cursor to the MOV instruction to be modified.
   – Display the JOB CONTENT window and move the cursor to the move instruction to be changed.
2. Press [Axis Key].
   – Turn ON the servo power and press [Axis Key] to move the manipulator to the desired position.
3. Press [MODIFY].
   – The key lamp will blink.
4. Press [ENTER].
   – The position data in the present position is registered.

For MOV instructions for which position variables have been set, the position variables will not be changed.

3.4.4.2 Modifying Interpolation Type

1. Move the cursor to the move instruction to be modified.
   – Display the JOB CONTENT window, and move the cursor to the move instruction for which interpolation type is to be changed.
2. Press [FWD].
   – Turn ON the servo power and press [FWD] to move the manipulator to the position of the move instruction.
3. Press [DELETE].
   – The key lamp will blink.
4. Press [ENTER].
   – The cursor line step is deleted.
5. Press [MOTION TYPE].
   – Press [MOTION TYPE] to change the interpolation type.
   – Each time [MOTION TYPE] is pressed, the input buffer line instruction alternates.
6. Press [INSERT].
7. Press [ENTER].
   – The interpolation type and position data are changed at the same time.

NOTE: Modifying only interpolation type is impossible. The interpolation type can be modified as a choice for modifying the position data.
3.4 Modifying Steps

3.4.5 Undo Operation

After inserting, deleting, or modifying an instruction, the operation can be undone.

The UNDO operation becomes enabled by selecting {EDIT} → {ENABLE UNDO}, and becomes disabled by selecting {EDIT} → {DISABLE UNDO} while editing a job.

- The undo operation can be performed even after the manipulator is moved by the FWD or BWD operation or test operation after inserting, deleting, or modifying a move instruction. However, the undo operation cannot be performed if other instructions are edited or a job is executed in the play mode after editing the move instruction.
- The undo operation works only for the last five edited instructions only.

1. Press [ASSIST].
   - The assist menu appears.

2. Select {UNDO}.
   - The last operation is undone.

3. Select {REDO}.
   - The last UNDO operation is undone.
3.4.6 Modifying Reference Point Instructions

3.4.6.1 Deleting Reference Point Instructions

If the manipulator position differs from the cursor position, an error message is displayed. If this occurs, follow either of the procedures below.

- Press [REFP] + [FWD] to move the manipulator to the position to be deleted.
- Press [MODIFY] then [ENTER] to change the reference point position data to the current position of the manipulator.

1. Move the cursor to the reference point instruction to be deleted.
2. Press [DELETE].
   - The key lamp will blink.
3. Press [ENTER].
   - The reference point instruction at the cursor line is deleted.

3.4.6.2 Modifying Reference Point Instructions

1. Move the cursor to the reference point instruction to be modified.
2. Move the manipulator with [Axis Key]s.
   - Turn ON the servo power and use [Axis Key]s to move the manipulator to the desired position.
3. Press [REFP].
4. Press [MODIFY].
   - The key lamp will light.
5. Press [ENTER].
   - The reference point instruction at the cursor line is changed.
3.4.7 Modifying Timer Instructions

3.4.7.1 Deleting Timer Instructions

1. Move the cursor to the timer instruction to be deleted.

2. Press [DELETE].
   - The key lamp will light.

3. Press [ENTER].
   - The timer instruction at the cursor line is deleted.

3.4.7.2 Modifying Timer Instructions

1. Move the cursor to the timer instruction to be modified.

2. Press [SELECT].

3. Move the cursor to the input buffer line timer value.
   - Move the cursor to the input buffer line timer value and press [SHIFT] + the cursor to set the data.
   - To use [Numeric Key]s to input data, move the cursor to the input buffer line timer value and press [SELECT].

4. Change the timer value.

5. Press [MODIFY].

6. Press [ENTER].
   - This key lamp will light.
3.5 Modifying Jobs

3.5.1 Calling Up a Job

1. Select {JOB} under {Main Menu}.
2. Select {SELECT JOB}.
   – The JOB LIST window appears.
3. Select the desired job.

3.5.2 Windows Related to Job

There are five types of job windows. Jobs can be checked and edited in these windows.

- JOB HEADER Window
  Comments, data and time of registration, edit prohibit status, and so on are displayed and edited.

- JOB CONTENT Window
  The content of the registered job can be displayed and edited.

- COMMAND POSITION Window
  The taught data is displayed.

- JOB LIST Window
  The registered job is sorted alphabetically, then displayed, and the job is selected.

- JOB CAPACITY Window
  The number of registered jobs, amount of memory, number of steps used, etc. is shown.
3.5.3 JOB HEADER Window

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the menu.
4. Select {JOB HEADER}.
   - The JOB HEADER window appears. Scroll the window using the cursor.

1. JOB NAME
   Displays the name of the current job.

2. COMMENT
   Displays the comments attached to the current job. This can be edited in this window.

3. JOB FOLDER
   The JOB name which is set to this job is displayed.
   This can be edited in this window.

4. DATE
   Displays the date and time of the last editing of the job.

5. CAPACITY
   Displays the amount of memory that is being used to register this job.

6. LINES
   Displays the total number of instructions registered in this job.

7. STEPS
   Displays the total number of move instructions registered in this job.

8. EDIT LOCK
   Displays whether the Edit Lock setting for this job is “ON” or “OFF”. When the security mode is in the management mode or higher, this can be edited in this window.

9. CONTENTS DISPLAY
   Setting status whether displaying of the contents of a job is displayed with “PERMIT” or “PROHIBIT”.
   Set “PROHIBIT” to display “Invisible” for the instructions of the JOB CONTENT window to prohibit them from being displayed.
   When the security mode is in the management mode or higher, this can be edited in this window.
   (Setting the contents display is available in the software version DN1.91-00 or later.)
10. SAVE JOB
Setting status whether saving of this job data to an external memory device is displayed with “PERMIT” or “PROHIBIT”. Set “PROHIBIT” to prohibit the data from being saved to an external memory device. When the security mode is in the management mode or higher, this can be edited in this window. (Setting the save job is available in the software version DN1.91-00 or later.)

11. TO SAVE TO FD
Displays “DONE” if the contents of the job have already been saved to an external memory after the date and time of the last editing operation, and displays “NOT DONE” if they have not been saved. The job is marked as “DONE” only if it is saved as an independent job or as a related job.

12. GROUP SET
Displays the control group that this job controls. If the master axis is specified, the master axis is highlighted.

13. JOB KIND
Displays the kind of this job.

To return to the JOB CONTENT window from the JOB HEADER window, select {DISPLAY} from the menu and then select {JOB CONTENT}. 
3.5.4 JOB CONTENT Window

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   – The JOB CONTENT window appears.
   
   ⚪️ ← (Left) : The cursor is moved to the address area.

   ⚪️ → (Right): The cursor is moved to the instruction area.

**A. Address Area**

Displays the line numbers, the step numbers and the tool numbers which are registered in each step.

**B. Instruction Area**

Displays instructions, additional items, and comments. Line editing is possible.
3.5 Modifying Jobs

3.5.4.1 Switching the Address Area

Able to switch a state of the display (to hide or show) of the following numbers in the address area.

- Step numbers
- Tool numbers in the each step

1. Select the {JOB} under {Main Menu}.
2. Select {JOB CONTENT}.
   - Job content appears.
3. Select {DISPLAY} in the menu area.
   - A pull down menu appears.
4. Select {ENABLE STEP NO}.
   - Step numbers appear in the address area.
   - In the pull down menu, {ENABLE STEP NO} changes to { ✻ ENABLE STEP NO}.

---

STEP NO.

---
5. Select {＊ ENABLE STEP NO).  
   – Step numbers in the address area disappear.  
   – In the pull down menu, {＊ ENABLE STEP NO} changes to {ENABLE STEP NO).  

![Diagram 1]

6. Select {ENABLE TOOL NO).  
   – Tool numbers appear in the address area.  
   – In the pull down menu, {ENABLE TOOL NO} changes to {＊ ENABLE TOOL NO).  
   Tool numbers only appear in the line during the move instruction and also appear under the teach mode.  

![Diagram 2]
7. Select {ENABLE TOOL NO}.
   - Step numbers in the address area disappear.
   - In the pull down menu, {ENABLE TOOL NO} changes to {ENABLE TOOL NO}.

8. Select both {ENABLE STEP NO} and {ENABLE TOOL NO}.
   - The both step numbers and tool numbers appear in the address area.
   - In the pull down menu, {ENABLE STEP NO} changes to {ENABLE STEP NO}.
   - In the pull down menu, {ENABLE TOOL NO} changes to {ENABLE TOOL NO}.

Tool numbers only appear in the line during the move instruction and also appear under the teach mode.
9. Select both {∗ ENABLE STEP NO} and {∗ ENABLE TOOL NO}.

– The both step numbers and tool numbers disappear in the address area.

– In the pull down menu, {∗ ENABLE STEP NO} changes to {ENABLE STEP NO}.

– In the pull down menu, {∗ ENABLE TOOL NO} changes to {ENABLE TOOL NO}.

![Diagram of programming interface showing selected options and menu changes.](image)
3.5 Modifying Jobs

3.5.5 COMMAND POSITION Window

1. Select (ROBOT) under (Main Menu).
2. Select (COMMAND POSITION).

   - Edit operations cannot be conducted on this window, but the taught play speed and position data can be viewed on this window.

   ![Image of COMMAND POSITION Window]

   A. Interpolation
      Displays the interpolation type.

   B. Speed
      Displays the play speed.

   C. Command Position
      Displays the tool file number and position data that has been taught for this job. Steps which have no position data, such as move instructions which use position variables, are marked with an asterisk (*).

   D. Current Data
      Displays the current tool file number and position of the manipulator.
3.5.6 JOB CAPACITY Window

1. Select {JOB} under {Main Menu}.
2. Select {JOB CAPACITY}.

A. NUMBER OF JOBS
Displays the total number of jobs currently registered in the memory of DX200.

B. USED MEMORY
Displays the total amount of memory used in the DX200.

C. STEPS
Displays the total number of used steps.

D. EDITING BUFFER
Displays editing buffer use.
3.6 Editing Instructions

The editable content differs depending on whether the cursor is in the address area or instruction area.

A. When the cursor is in the address area
Instructions can be inserted, deleted, or modified.

B. When the cursor is in the instruction area
The data of additional items of already-registered instructions can be modified, inserted, or deleted.

Editing only additional items is called "line editing".

When inserting or modifying instructions, input the instruction with the function keys such as [TIMER], etc. or by using the instruction list dialog box.

The selected instruction is displayed on the input buffer line with the same additional items as registered previously.

If the addition, deletion or modification of additional item is needed, edit on the instruction DETAIL EDIT window. If it is not needed, continue the registration process.
3.6 Editing Instructions

3.6.1 Instruction Group

The instructions are divided into eight groups by processing or each work.

<table>
<thead>
<tr>
<th>Display</th>
<th>Instruction Group</th>
<th>Content</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN/OUT</td>
<td>I/O Instruction</td>
<td>Controls input and output</td>
<td>DOUT, WAIT</td>
</tr>
<tr>
<td>CONTROL</td>
<td>Control Instruction</td>
<td>Controls processing and each work</td>
<td>JUMP, TIMER</td>
</tr>
<tr>
<td>MOTION</td>
<td>Move Instructions</td>
<td>Moves the manipulator</td>
<td>MOVJ, REFP</td>
</tr>
<tr>
<td>DEVICE</td>
<td>Work Instructions</td>
<td>Operates arc welding, spot welding, handling, painting, etc.</td>
<td>ARCON, WVON, SVSPOT, SPYON</td>

</tr>
<tr>
<td>PRIOR</td>
<td>-</td>
<td>Specifies the previously-registered instruction.</td>
<td></td>
</tr>
</tbody>
</table>

Instruction List

By pressing [INFORM LIST], the instruction group list dialog box appears.

By selecting a group, the instruction list dialog box of the selected group appears.
3.6 Editing Instructions

3.6.2 Inserting Instructions

1. Move the cursor to the address area in the JOB CONTENT window.
   – Move the cursor to the line immediately before where the instruction is to be inserted, in the teach mode.

2. Press [INFORM LIST].
   – The INFORM command list appears, and an underline is displayed beneath the line number in the address area.

3. Select the instruction group.
   – The instruction list dialog box appears. The selected instruction is displayed on the input buffer line with the same additional items as registered previously.

4. Select the instruction.

5. Change the data of additional items or variables as required.
   – <When Nothing is to be Changed>
     (1) Proceed to Step 6.
3 Teaching
3.6 Editing Instructions

– <When Additional Items are to be edited>

1. Changing numeric data

(1) Move the cursor to the desired item and press [SHIFT] + the cursor to increase or decrease the value.

(2) To directly input the value using [Numeric Keys], press [SELECT] to display the input buffer line.

(3) Type the value and press [ENTER]. The value on the input buffer line is changed.

2. Adding, modifying, or deleting an additional item

(1) To add, modify, or delete an additional item, move the cursor to the instruction on the input buffer line and press [SELECT]. The DETAIL EDIT window appears.

– To add an item, move the cursor to "UNUSED" and press [SELECT]. The selection dialog box appears.

(2) Move the cursor to the desired item and press [SELECT]. To delete an item, move the cursor to the item to be deleted and select "UNUSED".
3. Changing the data type

(1) To change the data type of an additional item, move the cursor to the desired cell of the item and press [SELECT]. The data type list appears. Select the desired data type.

(2) After additional items have been added, modified or deleted as required, press [ENTER]. The DETAIL EDIT window closes and the JOB CONTENT window appears.

6. Press [INSERT] and [ENTER].
- The instruction displayed in the input buffer line is inserted.
3.6 Editing Instructions

### 3.6.3 Deleting Instructions

1. Move the cursor to the address area in the JOB CONTENT window.
   - Move the cursor to the instruction line to be deleted, in the teach mode.

   ![The line to be deleted](image)

   - The instruction is deleted and the following lines move up.

2. Move the cursor to the deleting line in the address area.

3. Press [DELETE] and [ENTER].
   - The instruction is deleted and the following lines move up.

### 3.6.4 Modifying Instructions

1. Move the cursor to the address area in the JOB CONTENT window.
   - Move the cursor to the instruction line to be modified, in the teach mode.

   ![Instruction line to be changed](image)

2. Press [INFORM LIST].
   - The INFORM command list appears and the cursor moves to the INFORM command list.

3. Select the instruction group.
   - The instruction list dialog box appears. The selected instruction is displayed on the input buffer line with the same additional items as registered previously.
3 Teaching
3.6 Editing Instructions

4. Move the cursor to the instruction to be modified and press [SELECT].

5. Change the data of additional items or variables as required.

– <Editing Additional Items>

1. Changing numeric data

(1) Move the cursor to the desired item and press [SHIFT] + the cursor to increase or decrease the value.

![Numeric Value Adjustment]

– To directly input the value using [Numeric Key]s, press [SELECT] to display the input buffer line for the numeric values.

![Input Buffer Line]

(2) Type the value and press [ENTER]. The value on the input buffer line is changed.

2. Adding, modifying, or deleting an item

(1) To add, modify or delete an additional item, move the cursor to the instruction on the input buffer line and press [SELECT]. The DETAIL EDIT window appears.

![Detail Edit Window]

(2) To add an item, move the cursor to “UNUSED” and press [SELECT]. The selection dialog box appears.
3.6 Editing Instructions

(3) Move the cursor to the desired item and press [SELECT]. To delete an item, move the cursor to the item to be deleted and select “UNUSED”.

![Image of USER interface]

3. Changing the data type

(1) To change the data type of an additional item, move the cursor to the check mark of the item and press [SELECT]. The data type list appears. Select the desired data type.

![Image of USER interface]

(2) After additional items have been added, modified or deleted as required, press [ENTER]. The DETAIL EDIT window closes and the JOB CONTENT window appears.

6. Press [MODIFY] and [ENTER].
3 Teaching
3.6 Editing Instructions

The instruction is modified to the instruction displayed in the input buffer line.
3.6 Editing Instructions

3.6.5 Modifying Additional Numeric Data

1. Move the cursor to the instruction area in the JOB CONTENT window.
   – Move the cursor to the instruction area if it is in the address area.
   – Press [SELECT] to change the mode to line editing mode.

2. Select the line where the number data is to be modified.
   – The selected line can now be edited.

<table>
<thead>
<tr>
<th>Number data to be modified</th>
</tr>
</thead>
<tbody>
<tr>
<td>0004 MOD4 1.000 0.00 0.00</td>
</tr>
<tr>
<td>0005 SELECT 1.000 0.000 0.00</td>
</tr>
<tr>
<td>0006 TIME 1.00 0.00 0.00</td>
</tr>
</tbody>
</table>

3. Move the cursor to the numeric data to be modified.

4. Input the desired number.
   – Press [SHIFT] + the cursor to increase or decrease the value. To directly input the number, press [SELECT]. The input buffer line appears. Type the number and press [ENTER].

5. Press [ENTER].
   – The numeric data is modified.

<table>
<thead>
<tr>
<th>Instruction line for which numeric data was changed</th>
</tr>
</thead>
<tbody>
<tr>
<td>0104 MOD4 1.000 0.00 0.00</td>
</tr>
<tr>
<td>0105 SELECT 1.000 0.000 0.00</td>
</tr>
<tr>
<td>0106 TIME 1.00 0.00 0.00</td>
</tr>
</tbody>
</table>
3.6.6 Modifying Additional Items

1. Move the cursor to the instruction area in the JOB CONTENT window.
2. Select the instruction line for which the additional item is to be modified.
   - Move the cursor to the instruction area if it is in the address area
   - Press [SELECT] to change the mode to line editing mode.

3. Select the instruction.
   - Move the cursor to a instruction, the press [SELECT] to display DETAIL EDIT window.

4. Select the additional item to be modified.
   - The selection dialog box appears.

5. Select the desired additional item.
   - The modified additional item is displayed on the DETAIL EDIT window.

6. Press [ENTER].
   - The DETAIL EDIT window closes, and the JOB CONTENT window appears.

7. Press [ENTER].
   - Contents of the input buffer line are registered on the cursor line of the instruction area.
3.6 Editing Instructions

3.6.7 Inserting Additional Items

1. Move the cursor to the instruction area in the JOB CONTENT window.

2. Select the instruction line for which the additional item is to be inserted.
   – The selected line can now be edited.

3. Select the instruction.
   – Move the cursor to [SELECT] and press, then DETAIL EDIT window appears.

4. Select the additional item to be inserted on DETAIL EDIT window.
   – The selection dialog box appears.

5. Select inserting additional item.
   – The item to be added appears.
   – When the additional item needs the numeric data, move the cursor to the number and press [SELECT]. The input buffer line appears.
     Type the number and press [ENTER].
3  Teaching
3.6  Editing Instructions

6. Press [ENTER].
   – DETAIL EDIT window closes and JOB CONTENT window appears.

7. Press [ENTER].
   – Contents of the input buffer line are registered on the cursor line of
     the instruction area.

| Instruction line for which additional item was added. | 0000 MOV AX=0100.00 | 0005 MOV BX=2500.00 | 0010 MOV CX=7550.00 |
3.6.8 Deleting Additional Items

NOTE This operation cannot be used for the additional item which is locked.

1. Move the cursor to the instruction area in the JOB CONTENT window.

2. Select the line where the additional item is to be deleted.
   - Move the cursor to the instruction area when it is in the address area.
   - Press [SELECT] to change the mode to line editing mode.

3. Select the instruction.
   - Move the cursor to the instruction and press [SELECT], then DETAIL EDIT window appears.

4. Select the additional item to be deleted.
   - The selection dialog box appears.

5. Select “UNUSED”.
   - “UNUSED” is displayed on the DETAIL EDIT window.

6. Press [ENTER].
   - The DETAIL EDIT window closes, and the JOB CONTENT window appears.

7. Press [ENTER].
   - Contents of the input buffer line are registered on the cursor line of the instruction area.
3.7 Editing Jobs

The following five operations are to edit jobs.

- **Copy**: Copies a specified range to the buffer.
- **Cut**: Deletes a specified range from a job, and copies it to a buffer.
- **Paste**: Inserts a content of the buffer into a job.
- **Reverse Paste**: Reverses the order of the contents of the buffer, and inserts them into a job.
- **Base Reverse Paste**: Reverses the order of the contents of the buffer and adjusts the to-and-from speeds same, and inserts them into a job.

```
MOVL V=100 ;Move to at V=100
MOVL V=50 ;Move to t V= 50
MOVL V=80 ;Move to at V=80
MOVL V=30 ;Move to at V=30
MOVL V=70 ;Move to at V=70

Excute Base Reverse Paste

MOVL V=100 ;Move to at V=100
MOVL V=50 ;Move to t V= 50
MOVL V=80 ;Move to at V=80
MOVL V=30 ;Move to at V=30
MOVL V=70 ;Move to t V=70
MOVL V=80 ;Move to at V=80
MOVL V=50 ;Move to at V= 50
MOVL V=70 ;Move to at V=70
```

The speed and interpolation are different going and returning.

```
MOVL V=100 ;Move to at V=100
MOVL V=50 ;Move to t V= 50
MOVL V=80 ;Move to at V=80
MOVL V=30 ;Move to at V=30
MOVL V=70 ;Move to t V=70
MOVL V=80 ;Move to at V=80
MOVL V=50 ;Move to at V= 50
MOVL V=70 ;Move to at V=70
```

The speed and interpolation are the same going and returning.

Reverse paste
3.7 Editing Jobs

3.7.1 Selecting the Range

After setting the range, copying and deleting can be performed.

1. Move the cursor to the instruction area in the JOB CONTENT window.

2. Move the cursor to the start line and press [SHIFT] + [SELECT].
   - The range specification begins, and the address is displayed in reverse.

3. Move the cursor to the end line.
   - The range is varied by moving the cursor. Up to the line specified by the cursor is the range.
3.7 Editing Jobs

3.7.2 Copying

Before copying, the range to be copied has to be specified.

1. Select {EDIT} under the menu.
   – The pull-down menu appears.
   2. Select {COPY}.
   – The specified range is copied to the buffer.

3.7.3 Cutting

Before cutting, the range to be cut has to be specified.

1. Select {EDIT} under the menu.
   – The pull-down menu appears.
   2. Select {CUT}.
   – The confirmation dialog box appears. When “YES” is selected, the specified range is deleted and copied to the buffer.
   – When “NO” is selected, the cutting operation is cancelled.
3.7 Editing Jobs

3.7.4 Pasting

Before pasting, the range to be pasted has to be stored in the buffer.

1. Move the cursor to the line immediately before the desired position in the JOB CONTENT window.
   - The pull-down menu appears.

2. Select (EDIT) under the menu.

3. Select (PASTE).
   - The confirmation dialog box appears.
   - When “YES” is selected, the contents of the buffer are inserted to the job.
   - When “NO” is selected, the pasting operation is cancelled.
3.7.5 Reverse Pasting

Before pasting, the range to be pasted has to be stored in the buffer.

1. Move the cursor to the line immediately before the desired position in the JOB CONTENT window.

2. Select (EDIT) under the menu.
   - The pull-down menu appears.

3. Select (REVERSE PASTE).
   - The confirmation dialog box appears.
   - When “YES” is selected, the contents of the buffer are reverse pasted to the job.
   - When “NO” is selected, the reverse-pasting operation is cancelled.
3.7 Editing Jobs

3.7.6 Commenting Out a Line

The lines in a job can be commented out by specifying line-by-line or multiple lines.

By commenting out a line, the line can be exempted from a target when executing a job.

When modifying or selecting the commented-out line, "ERROR 1012: This line is defined as a comment." appears.

When performing the conversion operation, such as the parallel shift job conversion, for a job that includes the commented-out line, the conversion operation cannot be performed to the commented-out line.

Followings are the settings for the commented-out line:

- Treated equivalent as a comment instruction.
- Cannot be edited.
- Displayed as a line or a step.
- The set position can be confirmed by using direct open function.
- Exempted from a target for the conversion operation.

**NOP and END cannot be commented out.**

When NOP and END are tried to be commented out, "ERROR 2371: EDIT LOCK/COMMENT functions cannot be applied to NOP and END." appears.

3.7.6.1 Commenting Out One Line

1. Display the {JOB CONTENT} window.
2. Move the cursor to the targeted line.
   - Place the cursor on the line to be commented out.
   - Move the cursor to the right (INST).
3. Press [SHIFT] + [SELECT].
   – The line is selected.

4. Select {EDIT} → {COMMENT OUT} under the pull-down menu.
   – The selected line is commented out.
   – "//" is displayed at the head of the selected line.
3.7.6.2 Commenting Out Multiple Lines

1. Display the {JOB CONTENT} window.
2. Move the cursor to the targeted line.
   – Place the cursor at the head of the line to be commented out.
   – Move the cursor to the right (INST).
3. Press [SHIFT] + [SELECT].
   – The line is selected.
4. Press [↑] or [↓] to select multiple lines to be commented out.
5. Select (EDIT) → (COMMENT OUT) under the pull-down menu.

- The selected lines are commented out.
- "//" is displayed at the head of the selected line.
3.7 Editing Jobs

3.7.6.3 Canceling the Comment Out of One Line

1. Display the \{JOB CONTENT OUT\} window.

2. Move the cursor to the targeted line.
   - Place the cursor on the line whose comment out is to be canceled.
   - Move the cursor to the right (INST).

3. Press [SHIFT] + [SELECT].
   - The line is selected.

4. Select (EDIT) → (*COMMENT OUT) under the pull-down menu.

- The comment out of the selected line is canceled.
- "//" at the head of the line disappears.
3.7.6.4 Canceling the Comment Out of Multiple Lines

1. Display the \{JOB CONTENT OUT\} window.

2. Move the cursor to the targeted line.
   - Place the cursor at the head of the line whose comment out is to be canceled.
   - Move the cursor to the right (INST).

3. Press [SHIFT] + [SELECT].
   - The line is selected.
4. Press [↑] or [↓] to select multiple lines whose comment out is to be canceled.

5. Select (EDIT) → (*COMMENT OUT) under the pull-down menu.

- The comment out of the selected lines is canceled.
- "//" at the head of the line disappears.
When the lines which are not commented out are included in the selected lines, {COMMENT OUT} (without ***) is displayed in the pull-down menu.

In this case, when {COMMENT OUT} is selected, all the selected lines will be commented out.
3.7 Editing Jobs

3.7.6.5 Canceling All the Comment Out of Lines

1. Display the {JOB CONTENT} window.
2. Move the cursor to the right (INST).
3. Select {EDIT} → {COMMENT OUT CLR (ALL)} under the pull-down menu.

– The comment out of all the lines of the displayed jobs are canceled.
– "//" at the head of the line disappears.
For the following sets of instructions, only one of the instructions cannot be commented out independently. When commenting out, select both of the instructions.

When only one of the instructions are tried to be commented out, "Error 2372: This line cannot be defined as a comment." appears, and the comment out is not executed.

- IFTHEN,ENDIF
- SWITCH,ENDSWITCH

For the following sets of instructions, when one of the instructions is commented out, another instruction will automatically be commented out.

- FOR,NEXT
- WHILE, ENDWHILE
3.7 Editing Jobs

3.7.7 Prohibiting Editing Line-by-Line

The Edit Lock setting can be performed to the jobs line-by-line.

By setting the Edit Lock to a job line, the line will be prohibited from being edited.

When the editing operation, such as changing, deletion, selection, or cutting, is performed to the line to which the Edit Lock is set, “Error 1011: EDIT LOCK is set for this line.” appears.

Also, when the conversion operation such as the parallel shift job conversion is performed to the job including the lines to which the Edit Lock is set, the lines will not be converted.

The Edit Lock cannot be set to NOP and END.

When Edit Lock is tried to be set to NOP and END, “ERROR 2371: EDIT LOCK/COMMENT functions cannot be applied to NOP and END.” appears.

3.7.7.1 Prohibiting Editing One Line

For the Edit Lock operation of one line, follow the procedures below.

1. Display the (JOB CONTENT) window.

2. Move the cursor to the targeted line.

   – Place the cursor on the line to which the Edit Lock operation is to be performed.

   – Move the cursor to the right (INST).

3. Press [SHIFT] + [SELECT].

- The line is selected.

4. Select (EDIT) → (LINE EDIT LOCK) under the pull-down menu.

- The selected line will be prohibited from being edited, and "X" is displayed at the head of the line.
3.7.7.2 Prohibiting Editing Multiple Lines

For the Edit Lock operation of multiple lines, follow the procedures below.

1. Display the {JOB CONTENT} window.

2. Move the cursor to the targeted line.
   - Place the cursor at the head of the line to which the Edit Lock operation is to be performed.
   - Move the cursor to the right (INST).

3. Press [SHIFT] + [SELECT].
   - The line is selected.
3 Teaching

3.7 Editing Jobs

4. Press [↑] or [↓] to select multiple lines to which the Edit Lock operation is to be performed.

5. Select (EDIT) → (LINE EDIT LOCK) under the pull-down menu.

- The selected line will be prohibited from being edited, and "X" is displayed at the head of the line.
3.7.7.3 Canceling the Edit Lock of One Line

For canceling the Edit Lock of one line, follow the procedures below.

1. Display the {JOB CONTENT} window.

2. Move the cursor to the targeted line.
   - Place the cursor on the line whose Edit Lock is to be canceled.
   - Move the cursor to the right (INST).

3. Press [SHIFT] + [SELECT].
   - The line is selected.
3 Teaching
3.7 Editing Jobs

4. Select (EDIT) → (*LINE EDIT LOCK) under the pull-down menu.

- The Edit Lock of the selected line is canceled.
- "X" at the head of the line disappears.
3.7.7.4 Canceling the Edit Lock of Multiple Lines

1. Display the {JOB CONTENT} window.
2. Move the cursor to the targeted line.
   - Place the cursor at the head of the line whose Edit Lock is to be canceled.
   - Move the cursor to the right (INST).
3. Press [SHIFT] + [SELECT].
   - The line is selected.
3 Teaching

3.7 Editing Jobs

4. Press [↑] or [↓] to select multiple lines whose Edit Lock is to be canceled.

5. Select (EDIT) → (*LINE EDIT LOCK) under the pull-down menu.

- The Edit Lock of the selected lines is canceled.
- "X" at the head of the line disappears.
When the lines to which the Edit Lock is not set are included in the selected lines, (LINE EDIT LOCK) (without **) is displayed in the pull-down menu.

In this case, when (LINE EDIT LOCK) is selected, the Edit Lock will be set to all the selected lines.
3 Teaching
3.7 Editing Jobs

3.7.7.5 Canceling All the Edit Lock of Lines

1. Display the {JOB CONTENT} window.
2. Move the cursor to the right (INST).
3. Select {EDIT} → {EDITLOCK CLR (ALL)} under the pull-down menu.

– The Edit Lock of all the lines is canceled, and the displayed "X" disappears.
3 Teaching
3.8 Test Operations

3.8 Test Operations

Playback operations can be simulated in the teach mode with test operations. This function is convenient for checking continuous paths and operation instructions.

Test operation differs in the following ways from actual playback in the play mode.

- Operation speeds greater than the maximum teaching speed are reduced to the maximum teaching speed.
- Only machine lock is available among special operations for playback in the play mode.
- Work instruction output, such as arc output, is not executed.

3.8.1 Test Operation Procedures

Test operation is performed by pressing [INTERLOCK] and [TEST START]. For safety purposes, these keys will only function while the keys are held down.

1. Select {JOB} under {Main Menu}.
2. Press {JOB}.
   – The test operation JOB CONTENT window appears.
3. Press [INTERLOCK] + [TEST START].
   – The manipulator starts the test cycle operation.
   – The manipulator moves only while these keys are held down. However, after the operation starts, the motion continues even if [INTERLOCK] is released.
   – The manipulator stops immediately when [TEST START] is released.

NOTE Always check safety conditions before starting the manipulator in motion.
3.8 Test Operations

3.8.2 Manual Full-speed Function

Manual full-speed function allows the manipulator to perform the test run or FWD/BWD operation at the speed set in the job.

3.8.2.1 Setting Method

1. Cause short-circuit between the connection numbers 13 and 14, and between 15 and 16 on the terminal block (JANCD-YFC22-E) respectively. (Normally, they are opened.)

2. The message "Full-speed test mode" is displayed as follows when the setting is finished.
3.8 Test Operations

3.8.2.2 Operation Speed

When the full-speed test mode is set, operation speed is limited depending on the setting of manual speed as follows.

<table>
<thead>
<tr>
<th>Manual speed</th>
<th>Limit of operation speed (default value)</th>
<th>Parameter (Unit: 0.01%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inching</td>
<td>20%</td>
<td>S1CxG60 (default value: 2000)</td>
</tr>
<tr>
<td>Slow</td>
<td>50%</td>
<td>S1CxG61 (default value: 5000)</td>
</tr>
<tr>
<td>Medium</td>
<td>75%</td>
<td>S1CxG62 (default value: 7500)</td>
</tr>
<tr>
<td>Fast</td>
<td>100% (fixed value)</td>
<td>-</td>
</tr>
</tbody>
</table>

- The limit values of operation speed described in the table above are the ratio against the manipulator's maximum speed, not against the taught speed. The values are for restraining the operation speed not to exceed the limit values of operation speed against the manipulator's maximum speed during the test run or FWD/BWD operation.

- Manual full-speed function allows the manipulator to perform the test run or FWD/BWD operation at the taught speed by a job during the teach mode. Make sure that there is no person around the manipulator and pay great attention to perform the operation.

- If the full-speed test mode is set or released while a servo power is ON, the servo power turns OFF.
3.8.3 Test Operation (High Accuracy)

3.8.3.1 Test Operation (High Accuracy)

In test operation (high accuracy), the motion path of the manipulator’s control point for playback operation in the taught speed (speed override: 100%) is simulated by executing “test operation”.

The repetitive accuracy of the motion path in test operation (high accuracy) had been greatly improved in comparison with the conventional test operation (normal).

For the “test operation”, refer to chapter 3.8.1 “Test Operation Procedures”.
CAUTION

Following functions cannot be simulated in the test operation (high accuracy).

- Weaving function
- COMARC function
- Sensor function
- Twin/triple coordinated control function
- Conveyor synchronized function
- Weld line coordinate shift function

When the functions above are tried to be executed in test operation (high accuracy), the alarm "4909 TEST RUN(HIGH ACCURACY) ERROR" occurs. As for the functions above, operate in the test operation (normal).

NOTE

The switching position of the cursor is different in test operation (high accuracy) and in test operation (normal).

Before performing the job editing (add or modify teaching position) or back operation after the test operation (high accuracy) is interrupted, make sure to check the cursor position.
3.8 Test Operations

3.8.3.2 Setting Method

1. Select (SETUP) under main menu → (TEACHING CONDITION SETTING).

2. Move the cursor to the "TEST RUN CONTROL" and select "HIGH ACCURACY". ("NORMAL" and "HIGH ACCURACY" are displayed alternately.)
   "HIGH ACCURACY" is for test operation (high accuracy) and "NORMAL" is for the conventional test operation.
   (Default setting is "NORMAL".)

By executing "test operation" after the setting above, test operation (high accuracy) is started.
3.9 Other Job-editing Functions

3.9.1 Editing Play Speed

There are two ways to modify play speed:

- Modification of Speed Type
- Relative Modification

3.9.1.1 Modification of Speed Type

This method is used to modify the speed type (such as VJ, V, VR, etc.)

```
0005  MOVJ VJ=25.00
0006  MOVL V=138
0007  MOVJ VJ=50.00
```

Only VJ is changed to 100.

```
0005  MOVJ VJ=100.00
0006  MOVL V=138
0007  MOVJ VJ=100.00
```

<table>
<thead>
<tr>
<th>Type of Play Speed</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>VJ</td>
<td>Joint Speed</td>
</tr>
<tr>
<td>V</td>
<td>TCP Speed</td>
</tr>
<tr>
<td>VR</td>
<td>Posture Angle Speed</td>
</tr>
<tr>
<td>VE</td>
<td>Base Axis Speed</td>
</tr>
</tbody>
</table>

3.9.1.2 Relative Modification

All steps are selected regardless of the play speed type. This method is used to change all steps by a specified percentage (1% to 200%). This is called relative modification.

```
0005  MOVJ VJ=25.00
0006  MOVL V=138
0007  MOVJ VJ=50.00
```

Speed is doubled.

```
0005  MOVJ VJ=50.00
0006  MOVL V=276
0007  MOVJ VJ=100.00
```

The speed of the entire job or specified section can be changed.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   - The JOB CONTENT window appears.
3. Move the cursor to the instruction area.
4. Press [SHIFT] + [SELECT] in the speed modify start line.
   - If the section is not specified, the speed of the entire job will be changed.
   - Move the cursor to the end line. The line numbers of the selected lines are highlighted.
3.9 Other Job-editing Functions

5. Select {EDIT} under the menu.
6. Select {CHANGE SPEED}.
   – The SPEED MODIFICATION window appears.

   ![SPEED MODIFICATION Window]

7. Set desired items.
   **A. START LINE NO.**
   Displays the first line number of the section to be modified.
   **B. END LINE NO.**
   Displays the last line number of the section to be modified.
   **C. MODIFICATION TYPE**
   Selects the confirmation before changing: “CONFIRM” or “NO CONFIRM”.
   Each time [SELECT] is pressed when the cursor is on this item, the setting alternates between “CONFIRM” and “NO CONFIRM”.
   **D. SPEED KIND**
   Selects the speed type.
   When [SELECT] is pressed when the cursor is on this item, selection dialog box appears. Select the speed type to be changed.
   **E. SPEED**
   Specifies the speed value.
   When [SELECT] is pressed when the cursor is on this item, the mode changes to the number input mode. Input the speed value and press [ENTER].

8. Select “EXECUTE”.
   – The speed begins to change.
   – If “MODIFICATION TYPE” is set to “CONFIRM”, the confirmation dialog box “Modifying speed” is displayed. Press [ENTER] to change the speed on the first line and search for the next speed. Press the UP/DOWN cursor button to keep the speed on the first line and search for the next speed. To cancel the speed modification, press [CANCEL].
   – If “MODIFICATION TYPE” is set to “NOT CONFIRM”, all the speeds of the specified section are changed.
3.9 Other Job-editing Functions

3.9.1.3 Modification by TRT (Traverse Time)

Modifications made by TRT have the following characteristics:

• By setting the time required to execute a move instruction (moving time) to a desired value, the speeds can be modified.
• It is possible to measure the moving time without actually moving the manipulator.

For example, when the movement from lines 5 through 20 currently requires 34 seconds, and you want to reduce it to 15 seconds or extend it to 50 seconds, this function is used.

1. Select (JOB) under (Main Menu).
2. Select (JOB).
   – The JOB CONTENT window appears.
3. Move the cursor to the instruction area.
4. Press [SHIFT] + [SELECT] in the weaving time measure start line.
   – Move the cursor to the end line. The line numbers of the selected lines are highlighted.
5. Select (EDIT) under the menu.
6. Select (TRT).
   – The TRT window appears.

7. Set the desired items.

**A. START LINE NO.**
Displays the first line number of the section to be measured and modified.

**B. END LINE NO.**
Displays the last line number of the section to be measured and modified.

**C. MOVING TIME**
The weaving time needed to move from the first number to last number is measured and displayed.

**D. SETTING TIME**
Set the desired weaving time.
When [SELECT] is pressed when the cursor is on this item, the input buffer line appears. Input the desired weaving time and press [ENTER].
3 Teaching
3.9 Other Job-editing Functions

8. Select “EXECUTE”.

– The speed is changed according to the setting.

• If instructions that include specific speed data such as SPEED or ARCON instructions (including speed data of the welding condition file) exist in the specified section, the speed data for those steps are not changed. Therefore, in such cases, the set time and the actual time required are not same.

• If the speed data is limited by the maximum value, the following message is displayed.

• The line to which the Edit Lock function is set or the comment out is performed cannot be changed.

(For details, refer to chapter 3.7.6 “Commenting Out a Line” at page 3-71 and chapter 3.7.7 “Prohibiting Editing Line-by-Line” at page 3-82.)
3.9 Other Job-editing Functions

### 3.9.2 Editing Interpolation Type

1. Select `{JOB}` under `{Main Menu}`.
2. Select `{JOB}`.
   - The JOB CONTENT window appears.
3. Move the cursor to the instruction area.
4. Select the line to be modified.
   - The instruction on the cursor is displayed in the input buffer line.
5. Press `[SHIFT] + `the cursor simultaneously`.
   - The interpolation type in the input buffer line changes.
   - The modification of the speed according to the modification of the interpolation type is calculated by the ratio to maximum speed at each speed.
   - Joint Speed: MAX=100.0%  
     Linear Speed: MAX=9000cm/min  
     (e.g.)  
     Joint Speed: 50% = Linear Speed: 4500cm/min  
     Linear Speed: 10% = Linear Speed: 900cm/min
   - The instruction on the cursor line is replaced with one on the input buffer line.
3.9.3 Editing Condition Files

Condition files are prepared in order to set the conditions for the manipulator to execute instructions. Multiple condition files are provided for each application. More than one pattern can be set up in each condition file. The patterns are listed by "condition numbers". This number is specified by the work instruction in a job.

**NOTE**
Refer to DX200 Operator’s Manual of each application for information regarding the contents and editing methods of the condition file.
3.9.4 User Variables

User variables are used for jobs to store counters, calculation results or input signals. Since the same user variable can be used in multiple jobs, save the numerical values as common references for the jobs and the user variables are maintained even when the power is turned OFF.

User variables have the following applications:

- Controlling of the number of workpieces
- Controlling of the number of jobs
- Sending/receiving of information between jobs

The data formats for user variables are described in the following table:

<table>
<thead>
<tr>
<th>Data Format</th>
<th>Variable No. (pcs)</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Byte Type</td>
<td>B000 to B099 (100)</td>
<td>Range of storable values is from 0 to 255. Can store I/O status. Can perform logical operations (AND, OR, etc.)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Integer Type</td>
<td>1000 to 1099 (100)</td>
<td>Range of storable values is from -32768 to 32767.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Double Precision Integer Type</td>
<td>D000 to D099 (100)</td>
<td>Range of storable values is from -2147483648 to 2147483647.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Real Type</td>
<td>R000 to R099 (100)</td>
<td>Range of storable values is from -3.4E+38 to 3.4E38. Accuracy: 1.18E-38 &lt; x ≤ 3.4E38</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Character Type</td>
<td>S000 to S099 (100)</td>
<td>Maximum storable number of characters is 16.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Position Type</td>
<td>P000 to P127 (128)</td>
<td>Can store position data in pulse form or in XYZ form.</td>
</tr>
<tr>
<td></td>
<td>BP000 to BP127 (128)</td>
<td>XYZ type variable can be used as target position data for move instructions, and as incremental values for parallel shift instructions. Teaching line coordinates system cannot be used.</td>
</tr>
<tr>
<td></td>
<td>EX000 to EX127 (128)</td>
<td></td>
</tr>
<tr>
<td>Timer variable</td>
<td>TM000 to TM059 (60)</td>
<td>Range of storable values is from -2147483648 to 2147483647.</td>
</tr>
</tbody>
</table>

* For the timer variable, refer to chapter 6.18.2 “Timer Variable”.
3.9 Other Job-editing Functions

3.9.4.1 Setting Byte, Integer, Double Precision Integer, and Real Type Variables

1. Select {VARIABLE} under {Main Menu}.
   – {BYTE}, {INTEGER}, {DOUBLE}, and {REAL} are displayed for the sub menu.
2. Select desired variable type.
   – The BYTE VARIABLE window appears. (Following is a case that (BYTE) is selected.)

   • **Play Speed V:**
     
     MOVL V=I000
     
     The variable I000 is used for speed V with this move instruction.
     
     The unit for V is 0.1mm per second.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for V is 0.1mm/s → V=100.0mm/s
     
     Note that, depending on the unit being used, the value of the variable and the value of the actual speed on occasion might not match.

   • **Play Speed VJ:**
     
     MOVL VJ=I000
     
     The unit for VJ is 0.01%.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for VJ is 0.01% → VJ=10.00%.

   • **Timer T:**
     
     TIMER T=I000
     
     The unit for T is 0.01 seconds.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for T is 0.01 seconds → T=10.00 seconds.

   **NOTE**
   
   • Play Speed V:
     
     MOVL V=I000
     
     The variable I000 is used for speed V with this move instruction.
     
     The unit for V is 0.1mm per second.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for V is 0.1mm/s → V=100.0mm/s
     
     Note that, depending on the unit being used, the value of the variable and the value of the actual speed on occasion might not match.

   • Play Speed VJ:
     
     MOVL VJ=I000
     
     The unit for VJ is 0.01%.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for VJ is 0.01% → VJ=10.00%.

   • Timer T:
     
     TIMER T=I000
     
     The unit for T is 0.01 seconds.
     
     For example, if I000 were set as 1000, the following would be true:
     I000=1000 → unit for T is 0.01 seconds → T=10.00 seconds.
3. Move the cursor to the desired variable No.
   - When the desired variable number is not displayed, move the cursor
     with either of the following operations.
     
     • Move the cursor on the variable No. and press [SELECT]. Then
       input the variable No. using the [Numeric Key]s and press
       [ENTER].
     
     • Move the cursor to the menu area and select (EDIT) →
       {SEARCH}. Then input the variable No. with the [Numeric Key]s
       and press [ENTER]

4. Move the cursor to the data of the variable.
   - The number can be directly typed.

5. Input the desired number.

6. Press [ENTER].
   - Input value is set to the variable on the cursor position.
3.9.4.2 Setting Character Type Variables

1. Select (VARIABLE) under (Main Menu).
2. Select (STRING).
   - The STRING VARIABLE window appears.
   3. Move the cursor to the desired variable No.
      - When the desired variable number is not displayed, move the cursor with either of the following operations.
        • Move the cursor on the variable No. and press [SELECT]. Then input the variable No. using the [Numeric Key]s and press [ENTER].
        • Move the cursor to the menu area and select {EDIT} → {SEARCH}. Then input the variable No. with the [Numeric Key]s and press [ENTER].

The cursor is moved to desired variable number.
4. Move the cursor to the data of the variable.
   – The characters can be directly typed.

5. Input the desired characters.
   – For information on character input operation, refer to chapter 1.2.6 “Character Input Operation” at page 1-23.

6. Press [ENTER].
   – The input characters are set to the variable on the cursor position.
3.9 Other Job-editing Functions

3.9.4.3 Registering Variable Name

1. Select (VARIABLE) under (Main Menu).

2. Select desired variable.
   – Select any variable type from among byte type, integer type, double precision integer type, real type, robot position type, base position type, and station position type.

3. Move the cursor to desired variable number.
   – If desired variable number is not displayed, move the cursor by either of following operations.
     • Select the variable number, input desired variable number and press [ENTER]. The cursor moves to the variable number to be input.
     • Move the cursor to the menu area and select (EDIT) → (SEARCH). Input desired variable number and press [ENTER]. The cursor moves to the variable number to be input.

4. Select “NAME”.
   – The input buffer line appears.

5. Input name.

6. Press [ENTER].
   – The variable name is registered.

Refer to chapter 1.2.6 “Character Input Operation” at page 1-23 for the character input operation.
3.9 Other Job-editing Functions

3.9.4.4 Displaying Position Variables

1. Select {VARIABLE} under {Main Menu}.

2. Select desired position variable type.

   – The POSITION VARIABLE window of desired type among robot type, base type, and station type appears.

3. Move to a page with the objective variable number.

   – When the desired variable number is not displayed, move the cursor with either of the following operations.

   • Press [PAGE] or [SHIFT] + [PAGE].

   • Press page button, then input the variable No. using the [Numeric Key]s and press [ENTER].

   • Move the cursor to the menu area and select {EDIT} → {SEARCH}. Then input the variable No. with the [Numeric Key]s and press [ENTER].
3.9.4.5 Setting Position Variables

The following table shows the types of position variables and setting methods.

**NOTE**

- The setting of position variables is done in the teach mode.
- Turn the servo power ON when setting the variables with the [Axis Key]s.

<table>
<thead>
<tr>
<th>Type</th>
<th>Pxxx (Robot)</th>
<th>BPxxx (Base)</th>
<th>EXxxx (Station)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pulse Type</td>
<td>XYZ Type</td>
<td>Pulse Type</td>
<td>XYZ Type</td>
</tr>
<tr>
<td>Setting Method</td>
<td>Select coordinates from base, robot, user, tool.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Table 3-6: Types of Position Variables and Setting Method**

- **Using the numeric keys**
  - Enter 45000

- **Using the axis keys**
3.9 Other Job-editing Functions

3.9.4.6 Setting Position Variables Using the [Numeric Key]s

- **Pulse Type**

1. Select {VARIABLE} under {Main Menu}.
2. Select desired position variable type.
   - The desired variable window appears (robot, base, or station). (The POSITION VARIABLE window is used for this example.)

3. Select the variable data type.
   - The selection dialog box appears.

4. Select {PULSE}.
5. Move the cursor to desired data to be input and press [SELECT].
6. Input the value.
7. Press [ENTER].
   - The value is set in the cursor position.
3 Teaching
3.9 Other Job-editing Functions

XYZ Type

1. Select \{VARIABLE\} under \{Main Menu\}.
2. Select desired position variable type.
3. Select the variable data type.
   – The selection dialog box appears.
4. Select desired coordinates except PULSE.
5. Move the cursor to desired data to be input and press [SELECT].
6. Input the value.
7. Press [ENTER].
   – The value is set in the cursor position.

(1) Setting of “<TYPE>”
– Each time [SELECT] is pressed when the cursor is on the setting data in the input buffer line, the settings alternate.

About “<TYPE>”
• It is not necessary to set a type if the position variable is to be used for parallel shift operations.
• When the position variable is used with a move instruction such as “MOVJ P001”, it is necessary to set a type. For details on types, refer to chapter 3.9.4.10 "Manipulator Types" at page 3-116.

Current Position Window (XYZ) shows the current setting of a type.
### 3.9.7 Setting Position Variables Using the [Axis Key]s

#### Pulse Type

1. Select `{VARIABLE}` under `{Main Menu}`.
2. Select desired position variable type.
   - The desired variable window appears (robot, base, or station).
   
   (1) When there are two or more robot, base, or a station, specify the axis with the following operation.
   
   - **Robot**
     
     Each time `[SHIFT] + [ROBOT]` is pressed, the axis displayed on the status line changes:
     
     R1 → R2 → ... → R8.

   - **Base or Station**
     
     Each time `[SHIFT] + [EX.AXIS]` is pressed, the axis displayed on the status line changes:
     
     B1 → B2 → ... → B8 → S1 → S2 → ...... → S24.

   (2) Check the selected axis on the status line.

4. Move the manipulator with the [Axis Key]s.
   - Move the manipulator or the external axis to the desired position to be set to position variable.
5. Press [MODIFY].
6. Press [ENTER].

#### XYZ Type

1. Select `{VARIABLE}` under `{Main Menu}`.
2. Select desired position variable type.
   
   (1) When there are two or more robot, base, or a station, specify the axis with the following operation.
   
   - **Robot**
     
     Each time `[SHIFT] + [ROBOT]` is pressed, the axis displayed on the status line changes:
     
     R1 → R2 → ... → R8.

   - **Base or Station**
     
     Each time `[SHIFT] + [EX.AXIS]` is pressed, the axis displayed on the status line changes:
     
     B1 → B2 → ... → B8 → S1 → S2 → ...... → S24.

   (2) Check the selected axis on the status line.

3. Move the manipulator with the [Axis Key]s.
   - Move the manipulator or the external axis to the desired position to be set to position variable.
4. Press [MODIFY].
5. Press [ENTER].
3 Teaching
3.9 Other Job-editing Functions

3.9.4.8 Deleting Data Set of Position Variables

1. Select {VARIABLE} under {Main Menu}.
2. Select desired position variable type.
3. Select {DATA} under the menu.
   – The pull-down menu appears.
4. Select {CLEAR DATA}.
   – The position variable data on the displayed page are deleted.

3.9.4.9 Checking Positions by Position Variables

1. Select {VARIABLE} under {Main Menu}.
2. Select desired position variable type.
   (1) When there are two or more robot, base, or a station, specify the axis with following operation.
   • **Robot**
     Each time [SHIFT] + [ROBOT] is pressed, the axis displayed on the status line changes:
     R1→R2→...→R8.
   • **Base or Station**
     Each time [SHIFT]+[EX.AXIS] is pressed, the axis displayed on the status line changes:
     B1→B2→...→B8→S1→S2→......→S24.
   (2) Check the selected axis on the status line.
3. Press [FWD].
   – Selected axis moves to the position specified by the variable.

**NOTE**
The selected axis (manipulator, base, or station) moves directly to the set variable position.
Before pressing [FWD], check that the surrounding area is safe.
3.9.4.10 Manipulator Types

When the position data of the job data are described using the XYZ format, several postures may be taken according to the manipulator’s structure when moving it to the described position.

Although these postures have the same coordinates for TCP, they vary in pulse for each axis.

Thus, the manipulator’s posture cannot be uniquely defined only by the coordinate value, and it is necessary to specify the data other than the coordinate value to define the manipulator’s posture.

This is called “Type”.

Type varies according to the manipulator model.

For the manipulator with seven axes, X, Y, Z, Rx, Ry, Rz, Re and Type are used.

Re is an element to indicate the posture of the manipulator with seven axes and does not change by the specified coordinates.

The definition of Re is shown below.

NOTE
3.9.5 Flip/No Flip

When the angle of B-axis is within (+) range ($\theta_B \geq 0^\circ$), it is called "Flip", and when within (-) range ($\theta_B < 0^\circ$), "No Flip".

3.9.6 R-axis Angle

This specifies whether the R-axis angle is less than $\pm180^\circ$ or greater than $\pm180^\circ$.

<table>
<thead>
<tr>
<th>$R &lt; 180^\circ$</th>
<th>$R \geq 180^\circ$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-180° &lt; $\theta_R \leq 180^\circ$</td>
<td>180° &lt; $\theta_R$ or $\theta_R \leq -180°$</td>
</tr>
</tbody>
</table>

**NOTE**

$\theta_R$ is the angle when the R-axis home position is 0°.
### 3.9.7 T-axis Angle

This specifies positions of the R-, B-, and T-axis. For manipulators with wrist axes (three axes), this specifies whether the T-axis angle is less than ±180° or greater than ±180°.

<table>
<thead>
<tr>
<th>T &lt; 180°</th>
<th>T ≥ 180°</th>
</tr>
</thead>
<tbody>
<tr>
<td>-180° ≤ θ T ≤ 180°</td>
<td>180° ≤ θ T or θ T ≤ -180°</td>
</tr>
</tbody>
</table>

**NOTE**

θ T is the angle when the T-axis home position is 0°.

### 3.9.8 Front/Back

This specifies where in the S-axis rotation center the B-axis rotation center locates when viewing the L-axis and U-axis from the right-hand side. When viewed from the right-hand side, the right of the S-axis rotation center is called the front, and the left is called the back.
The diagram below shows the S-axis at 0° and at 180°. This is the configuration when the L-axis and the U-axis are viewed from the right-hand side.

For the manipulator with seven axes, this specifies where in the S-axis rotation center the U-axis rotation center locates when viewing the L-axis and U-axis from the right-hand side.

When viewed from the right-hand side, the right of the S-axis rotation center is called the front, and the left is called the back.
### 3.9.9 Upper Arm/Lower Arm

This specifies a type comprised of L-axis and U-axis when the L-axis and U-axis are viewed from the right-hand side.

<table>
<thead>
<tr>
<th>Upper Arm</th>
<th>Lower Arm</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Upper Arm Diagram]</td>
<td>![Lower Arm Diagram]</td>
</tr>
</tbody>
</table>

### 3.9.10 S-axis Angle

This designation is required for the manipulators which have working envelopes greater than ±180°.

This specifies whether the S-axis angle is less than ±180° or greater than ±180°.

<table>
<thead>
<tr>
<th>S&lt;180°</th>
<th>S ≥ 180°</th>
</tr>
</thead>
<tbody>
<tr>
<td>![S-axis Angle Diagram Less Than 180°]</td>
<td>![S-axis Angle Diagram Greater Than 180°]</td>
</tr>
</tbody>
</table>

-180° < θ S ≤ 180°  
180° < θ S or θ S ≤ -180°

**NOTE**

θ S is the angle when the S-axis home position is 0°.
3.9 Other Job-editing Functions

3.9.11 Editing Local Variables

As well as user variables, local variables can be used for the storage of counters, calculations, and input signals. The data format is the same as that of user variables. As shown in the following table, the letter L is affixed to the variable number to indicate a local variable.

Table 3-7: Local Variables

<table>
<thead>
<tr>
<th>Data Format</th>
<th>Variable No.</th>
<th>Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Byte Type</td>
<td>LB000 to LB°°°</td>
<td>Range of storable values is from 0 to 255. Can store I/O status. Can perform logical operations (AND, OR, etc.)</td>
</tr>
<tr>
<td>Integer Type</td>
<td>LI000 to LI°°°</td>
<td>Range of storable values is from -32768 to 32767.</td>
</tr>
<tr>
<td>Double Precision Integer Type</td>
<td>LD000 to LD°°°</td>
<td>Range of storable values is from -2147483648 to 2147483647.</td>
</tr>
<tr>
<td>Real Type</td>
<td>LR000 to LR°°°</td>
<td>Range of storable values is from -3.4E+38 to 3.4E+38. Accuracy: 1.18E-38 &lt; x ≤ 3.4E+38</td>
</tr>
<tr>
<td>Character Type</td>
<td>LS000 to LS°°°</td>
<td>Maximum storable number of characters is 16.</td>
</tr>
<tr>
<td>Position Type</td>
<td>Robot Axes</td>
<td>LP000 to LP°°°</td>
</tr>
<tr>
<td></td>
<td>Base Axes</td>
<td>LBP000 to LBP°°°</td>
</tr>
<tr>
<td></td>
<td>Station Axes</td>
<td>LEX000 to LEX°°°</td>
</tr>
</tbody>
</table>

Local variables differ from user variables in the following four ways:

- **Used in One Job Only**
  
  With user variables it is possible to define and use one variable in multiple jobs, but local variables are used only in the job in which they are defined, and cannot be read from other jobs. Accordingly, local variables do not affect other jobs, so it is possible to define a variable number (such as LB001) separately in different jobs, and use it in different ways in each of these jobs.
• **Able to Use Any Number of Variables**
The number is set in the JOB HEADER window. When the number is set, the area for the value is saved in memory.

• **Not Able to Display the Variable Contents**
To display the local variable contents, user variables are needed. For example, to view the contents of local variable LP000, save it temporarily as user variable P001. Then execute the instruction SET P001 LP000, and view the POSITION VARIABLE window for P001.

• **Enabled Only During the Execution of the Defined Job**
The contents of the local variables are enabled only during the execution of the defined job.
The local variable field is assured when the defined job is called (when the job is executed by a CALL or JUMP instruction, or the job is selected by the menu). Once the job is completed by the execution of a RET, END, or JUMP instruction, the local variable data that was set is disabled. However, if a job which uses local variables itself calls a separate job, then is returned by use of a RET instruction, the data that was present prior to the CALL instruction remains in effect and can be used.

**Precautions for Variables and Units**
As was the case with user variables, note that, depending on the value of the unit being used, the value of the variable and the value of the actual speed or time an occasion might not match. Refer to chapter 3.9.4 “User Variables” at page 3-104.
3 Teaching

3.9 Other Job-editing Functions

3.9.11.1 Setting the Number of Local Variables

The number of local variables used in a job is set in the JOB HEADER window. When the number of local variables is set, memory is allocated for those variables.

Only when expanding the “INSTRUCTION LEVEL”, it is possible to use local variables. However, when “PROHIBIT” is set to {COBTENT DISPLAY}, the number of local variables cannot be confirmed or changed.

Refer to “8.12 Instruction Level Setting” of “DX200 INSTRUCTIONS” (RE-CTO-A220) for details on setting the language level. Refer to chapter 5.8 “Prohibit Displaying the Contents of a Job” for setting the displaying of a job contents.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the menu.
4. Select {JOB HEADER}.
   – The JOB HEADER window appears. Scroll the window using the cursor.

5. Select the number of local variables to be set.
   – The input buffer line appears.
6. Input the number of variables.
7. Press [ENTER].
   - The number of local variables are set.
3.9 Other Job-editing Functions

3.9.12 Search

When editing or checking, jobs and steps can be searched for. Search can be done when the cursor is in either the address or instruction area on the JOB CONTENT window.

1. Select (JOB) under (Main Menu).
2. Select (JOB).
   – The JOB CONTENT window appears.
3. Select (EDIT) under the menu.
   – The pull-down menu appears.
4. Select (SEARCH).
   – The selection dialog box appears.
5. Select the search type.

Search is an operation by which the cursor is moved to a specific step or instruction in the edit job. The desired item can be instantly searched for without using the cursor.
3.9 Other Job-editing Functions

3.9.12.1 Line Search

This function moves the cursor to the desired line number.

1. Select {EDIT}, {SEARCH} and “LINE SEARCH”.
   – The number can be entered.

   ![Diagram of Line Search Function]

   1. Select {EDIT}, {SEARCH} and “LINE SEARCH”.
   – The number can be entered.

2. Input desired line number.

   ![Diagram of Line Search Function]

   2. Input desired line number.

3. Press [ENTER].
   – The cursor is moved to the line number and the window appears.

   ![Diagram of Line Search Function]

   3. Press [ENTER].
3.9.12.2 Step Search

This function moves the cursor to the desired step number (move instruction).

1. Select (EDIT), {SEARCH} and “STEP SEARCH”.
   - The number can be entered.

2. Input desired step number.

3. Press [ENTER].
   - The cursor is moved to the input step and the window appears.
3.9 Other Job-editing Functions

3.12.3 Label Search

This function searches for the desired label and the instruction using that label.

1. Select {EDIT}, {SEARCH} and “LABEL SEARCH”.
   - The characters can be entered.

2. Input desired label name.
   - For information on character input operation, refer to chapter 1.2.6 “Character Input Operation” at page 1-23.
   - At this time, search can be conducted by entering any one character of the label. For example, to search for the “START” label, enter only “S”, and the search can be done.

3. Press [ENTER].
   - The cursor is moved to the desired label and the window appears.
4. Use the cursor to continue search.
   - While searching, forward search and backward search are possible by pressing the cursor.
   - To end search, select {EDIT} → {END SEARCH} on the menu and press [SELECT].
### 3.9.12.4 Instruction Search

This function moves the cursor to a desired instruction.

1. Select {EDIT}, {SEARCH} and "INSTRUCTION SEARCH".
   - The INFORM command list appears.

2. Select desired instruction group.

3. Select desired instruction.
   - The cursor is moved to the selected instruction and the window appears.
4. Use the cursor to continue search.
   - While searching, forward search and backward search are possible by pressing the cursor.
   - To end search, select {EDIT} → {END SEARCH} on the menu and press [SELECT], or press [CANCEL].
3.9 Other Job-editing Functions

3.9.12.5 Tag Search

This function moves the cursor to the desired tag.

1. Select {EDIT}, {SEARCH} and “TAG SEARCH”.

   – The instruction list dialog box appears.

2. Select desired instruction group.

3. Select desired instruction for which the tag is to be searched.

   – The tag list dialog box for selected instruction appears.
4. Select the desired tag.
   - The cursor is moved to the selected tag and the window appears.

5. Use the cursor to continue search.
   - While searching, forward search and backward search are possible by pressing the cursor.
   - To end search, select {EDIT} → {END SEARCH} on the menu and press [SELECT], or press [CANCEL].
4.1 Preparation for Playback

4.1.1 Selecting a Job

Playback is the act of executing a taught job. Before playback operation, first call the job to be executed.

4.1.1.1 Calling a Job

1. Select {JOB} under {Main Menu}.

2. Select {SELECT JOB}.

– The JOB LIST window appears.

3. Select the desired job.
4.1 Preparation for Playback

4.1.2 Registering the Master Job

If a particular job is played back frequently, it is convenient to register that job as a master job (master registration). A job registered as the master job can be called more easily than the method described on the preceding page.

**NOTE**
Only one job can be registered as the master job. Registering a master job automatically cancels the previously registered master job.

Be sure to register a master job in the teach mode.

1. **Select (JOB) under (Main Menu).**
2. **Select (MASTER JOB).**
   - The MASTER JOB window appears.
3. **Press [SELECT].**
   - The selection dialog box appears.
4 Playback
4.1 Preparation for Playback

4. Select {CALL MASTER JOB}.
   – The JOB LIST window appears.

5. Select a job to be registered as a master job.
   – The selected job is registered as the master job.
4.1.3 Calling the Master Job

This operation is to call a master job. The job can be called in the JOB CONTENT window, PLAYBACK window, JOB SELECT window, or the MASTER JOB window.

- Calling from the JOB CONTENT, PLAYBACK, JOB SELECT Window

1. Select (JOB) under the menu.

2. Select (MASTER JOB).
   - The master job is called, and the JOB CONTENT window appears.
### Calling from the MASTER JOB Window

1. Select \{JOB\} under \{Main Menu\}.

2. Select \{MASTER JOB\}.
   - The MASTER JOB window appears.

3. Press [SELECT].
   - The selection dialog box appears.

4. Select \{CALL MASTER JOB\}.
   - The master job is called, and the JOB CONTENT window (during the teach mode), or the PLAYBACK window (during the play mode) appears.
4.1.2 The PLAYBACK Window

When the mode switch on the programming pendant is switched to "PLAY" while displaying the JOB CONTENT window, the PLAYBACK window appears.

A. Job Content
The cursor moves according to the playback operation. The contents are automatically scrolled as needed.

B. Override Speed Settings
Displayed when override speed setting is performed.

C. Cycle Time
Displays the operating time of the manipulator. Each time the manipulator is started, the previous cycle time is reset, and a new measurement begins. Either showing or hiding the cycle time display is selectable.

D. Start No.
First step in the measurement. Measurement starts when the start button lamp lights and the playback starts.

E. Motion Time
Displays the weaving time of the manipulator.

F. Playback Time
Displays the time from the beginning to the end of the measurement. Measurement ends when the manipulator stops and the start button lamp goes off.

4.1.2.1 Display of Cycle Time

Follow the procedure below to set whether or not to display the cycle time on the PLAYBACK window.

1. Select (DISPLAY) under the menu.
2. Select (CYCLE TIME).
   - The cycle time is displayed.
   - Repeat the same operation to hide the cycle time display.
4 Playback
4.1 Preparation for Playback

4.1.2.2 Operation Cycle

There are three types of manipulator operation cycles:

- **AUTO**: Repeats a job continuously.
- **1 CYCLE**: Executes a job once. If there is a called job during execution, it is performed, after which the execution processing returns to the original job.
- **1 STEP**: Executes one step (instruction) at a time.

The operation cycle can be changed as follows:

1. Select {JOB} under {Main Menu}, and then select {CYCLE}.
2. Select the operation cycle to be changed.
   - The operation cycle is changed.
4.1 Preparation for Playback

**Automatic Setting for Operation Cycle**

Automatic setting of the operation cycle can be changed by the following operation.

This can be done in the management mode only.

1. Select {SETUP} under {Main Menu}.
2. Select {OPERATE COND}.
   - The OPERATING CONDITION window appears. Use the cursor to scroll the screen.
3. Select the desired operation.
   - The selection dialog box appears.

**“NONE” setting**

The operation cycle is not changed when “NONE” is set. For example, if the setting is “CYCLE SWITCH IN PLAY MODE = NONE”, the operation cycle is maintained even after switching to the play mode.
4. Select a cycle.

   - The operation cycle when switching modes is set.
4.2 Playback

4.2.1 Playback Operation

Playback is the operation by which the taught job is played back. Follow the procedures below to start the playback operation.

- Programming pendant (start button)
- Peripheral device (external start input)

Which is used to start playback is specified by the mode switch on the programming pendant.

<table>
<thead>
<tr>
<th>Mode Switch on Programming Pendant</th>
<th>Job is started up by</th>
</tr>
</thead>
<tbody>
<tr>
<td>[PLAY]</td>
<td>[START] button on programming pendant</td>
</tr>
<tr>
<td>[REMOTE]</td>
<td>Peripheral device</td>
</tr>
</tbody>
</table>

For playback using the programming pendant, follow the procedures below.

4.2.1.1 Selecting the Start Device

1. Set the mode switch on the programming pendant to “PLAY”.
   - The remote mode is disabled and the play mode is enabled so the machines are to be started up by the programming pendant.

4.2.1.2 Servo On

1. Press [Servo ON Ready].
   - DX200 servo power is ON and the Servo ON lamp on the programming pendant lights.

4.2.1.3 Start Operation

1. Press [START].
   - The start button lamp lights and the manipulator begins operation.
4.2.2 Special Playback Operations

The following special operations can be performed during playback:

- Low speed operation
- Limited speed operation
- Dry run speed operation
- Machine lock operation
- Check mode operation

Two or more special operations can be performed at the same time. If multiple operations are selected, the speed during playback is limited to the speed of the slowest operation. Settings for special operations are done in the SPECIAL PLAY window.

When the PLAYBACK window is displayed, move the cursor to the menu area and select (UTILITY) → (SPECIAL PLAY). The SPECIAL PLAY window appears.

4.2.2.1 Low Speed Operation

The manipulator moves at low speed during the first step after starting. After the operation of this step, the manipulator stops regardless of the selection of the operation cycle and then low speed operation is canceled.

Even if the manipulator is stopped its motion during the low speed operation, the low speed status would not be canceled before it reaches the first step.

After one step operation, pressing [START] allows the manipulator to move at the taught speed.

1. Select “LOW SPEED START” on the SPECIAL PLAY window.
   - The setting alternates between “VALID” and “INVALID”.
2. Select “COMPLETE”.
   - The window returns to the PLAYBACK window.
4.2.2 Limited Speed Operations

The manipulator operates within the limited speed for the teach mode. Usually, the limited speed is set to 250mm/s. However, operation is performed at actual playback speeds for steps in which the set speed is under this limit.

1. Select “SPEED LIMIT” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.

2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.

4.2.2.3 Dry-run Speed Operations

The dry-run speed is a constant speed that is independent of the teaching speeds. The manipulator executes all the steps at a constant speed, which is convenient for quick check of a job consisting of slow operations. The dry-run speed is 10% of maximum speed.

1. Select the “DRY-RUN SPEED” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.

2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.

**NOTE**

Be careful of steps programmed at lower speeds than the dry-run speed, because they are executed at greater speeds than programmed.

1. Select the “DRY-RUN SPEED” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.

2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.

*Fig. 4-1: Safety Speed and Dry-run Speed*
4.2.4 Machine Lock Operation

A job is played back without moving the manipulator to check the status of input and output.

1. Select “MACHINE LOCK” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.
2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.

NOTE

- The setting of “MACHINE LOCK” is maintained even after the mode is switched: If the machine lock is set to “VALID” in the teach mode, it is still “VALID” after switching to the play mode. The same applies when the mode is switched from the play mode to the teach mode.
- Note that the machine lock becomes “INVALID” if the following operation is performed.
  - Execution of “CANCEL ALL SELECT” in the SPECIAL PLAY window.
  - Turning off the main power.

4.2.5 Check Mode Operation

The machine runs without issuing work instructions, such as the ARCON instruction. It is used primarily to check the path of the program.

1. Select “CHECK-RUN” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.
2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.

4.2.6 Weaving Prohibit Setting during Check Mode Operation

The weaving operation is not executed in the weaving section of the job.

1. Select “WEAV PROHIBIT IN CHK-RUN” under the SPECIAL PLAY window.
   – The setting alternates between “VALID” and “INVALID”.
2. Select “COMPLETE”.
   – The window returns to the PLAYBACK window.
4.2.7 Cancel All Special Operations

All special operations are disabled by the following operation.

1. Select (EDIT) from the menu.
2. Select “CANCEL ALL SELECT”.

– The message “All special functions canceled” appears.

NOTE Special operations are also automatically cancelled if the main power is shut OFF.
4.3 Stop and Restart

The manipulator stops in the following conditions:

- Hold
- Emergency stop
- Stop by alarm
- Others

4.3.1 Hold

Hold operation causes the manipulator to stop all motion.

- [HOLD] lamp lights while it is held down. At the same time, [START] lamp goes OFF.

4.3.1.1 Using the Programming Pendant

- **Hold**
  1. Press [HOLD] on the programming pendant.
  2. The manipulator stops. The [HOLD] lamp lights while the [HOLD] button is held down.

- **Release**
  1. Press [START] on the programming pendant.
  2. The manipulator restarts its operation from the position where it was stopped.

4.3.1.2 Using an External Input Signal (System Input)

- **Hold**
  1. Turn ON the hold signal from an external input (system input).
     - The manipulator stops temporarily.
       - The output signal “HOLD” turns ON.
       - The programming pendant [HOLD] lamp lights.

- **Release**
  1. Turn off the hold signal from an external input (system input).
     - Hold is released.
     - To continue the operation, press [START] or turn ON the external input signal (system input). The manipulator restarts its operation, beginning from the position where it was stopped.
4.3 Stop and Restart

4.3.2 Emergency Stop

At an emergency stop, the servo power supply that drives the manipulator is turned OFF and the manipulator stops immediately. An emergency stop can be performed by using either of the following:

- Button on the Front Door of the DX200
- Programming pendant
- External input signal (system input)

**Emergency Stop**

1. Press the emergency stop button.
   - The servo power turns OFF and the manipulator stops immediately.
   - On the front door of the DX200:
   - On the programming pendant:

**Using the Emergency Stop Button on the Programming Pendant**

**Using the External Input Signal (System Input)**

**Release**

1. Turn the emergency stop button in the direction of the arrows.
   - On the front door of the DX200:
   - On the programming pendant:

   - To turn ON the servo power supply again, press [SERVO ON READY] and then grip the Enable switch of the programming pendant.
4.3.2.1 Restart After Emergency Stop

CAUTION

- Prior to restarting after an emergency stop, confirm the position for the next operation and make sure there is no interference with the workpiece or fixture.

- The application of an emergency stop during high speed operations on continuous steps can result in the manipulator stopping two or three steps prior to the step that is being displayed. There is a risk of interference with the workpiece or fixture when the manipulator is restarted under such conditions.
4.3 Stop and Restart

4.3.3 Stop by Alarm

If an alarm occurs during operation, the manipulator stops immediately and the ALARM window appears on the programming pendant indicating that the machine was stopped by an alarm.

- If more than one alarm occurs simultaneously, all alarms can be viewed on the window. Scroll down the viewing area of the window when necessary.

The following operations are available in the alarm status: window change, mode change, alarm reset, and emergency stop.

To display the ALARM window again when the window is changed during alarm occurrence, select {SYSTEM INFO} and then {ALARM HISTORY} under {Main Menu}.

- Releasing Alarms

  <Minor Alarms>
  1. Press [SELECT].
     - Select "RESET" under the ALARM window to release the alarm status.
     - When using an external input signal (system input), turn ON the "ALARM RESET" setting.

  <Major Alarms>
  1. Turn OFF the main power supply and remove the cause of the alarm.
     - If a severe alarm such as hardware failure alarm occurs, the servo power is automatically shut off and the manipulator stops. If releasing does not work, turn OFF the main power and correct the cause of the alarm.
4.3.4 Others

4.3.4.1 Temporary Stop by Mode Change

When the play mode is switched to the teach mode during playback, the manipulator stops immediately.

![Stopped by switching mode]

To restart the operation, return to the play mode and perform a start operation.

4.3.4.2 Temporary Stop by the PAUSE Instruction

When the PAUSE instruction is executed, the manipulator stops operating.

![Robot stops by execution PAUSE command]

To restart the operation, perform a start operation. The manipulator restarts from the next instruction.
4.4 Modifying Play Speed

4.4.1 Speed Override

Speed modifications using the speed override have the following features:

- Speed can be modified during playback. The job can be played back at various speeds until the play speed is properly adjusted.
- Speed can be increased or decreased by a ratio of the current play speed. The ratio settings range from 10% to 150% in increments of 1%. Therefore, it is convenient when, for example, all play speed settings are to be increased by 150% at the same time.

The operation flow is shown below.
4.4 Modifying Play Speed

4.4.1 Setting Speed Overrides

1. Select {UTILITY} under the menu in the PLAYBACK window.
2. Select {SPEED OVERRIDE}.

   - The PLAYBACK window shows the speed override status.

3. Select “ON” or “OFF”.

   - Each time [SELECT] is pressed, “ON” and “OFF” alternate.
   - Select “ON” to modify the registered play speed during playback.
   - When “OFF” is selected, the registered play speed is not modified.
     To change the play speed temporarily (for example, to experiment with various speeds), select “OFF”.

4. Line up the cursor with the override ratio and move the cursor up and down to change the ratio.

   If you want to input the ratio number directly, move the cursor to the override ratio and press [SELECT].

   - The number input line appears. Input the override ratio using the [Numeric Key].
4.4 Modifying Play Speed

4.4.1.2 Modifying Play Speed

1. Set speed override.
2. Playback the manipulator.
   - The play speed is increased or decreased in the set ratio.
   - When setting “MODIFY” to “ON”, the step's play speed is modified when each step is reached.
   - When one cycle is completed by the END instruction, the speed override setting is cancelled.

        • Assuming that the manipulator moves from step 1 to step 2, the play speed of step 2 is not modified if the speed override is cancelled before reaching step 2.
        • The play speed after the modification by the speed override is limited by the maximum and the minimum speed of manipulator.
        • When the safety speed operation is commanded with the setting of “MODIFY: ON”, the manipulator operates at the safety speed. However, the play speed in memory is modified as set by the speed override.
        • Play speed set by the SPEED instruction is not modified.

4.4.1.3 Cancelling Speed Override Settings

1. Select {UTILITY} under the menu in the PLAYBACK window.
2. Select {SPEED OVERRIDE}.
   - The setting of the speed override ratio is cancelled.
   - If cancelled, the speed ratio setting is not displayed on the PLAYBACK window.

        The speed override settings are automatically cancelled in the following cases:
        • When dry-run speed operation is set.
        • When the mode is changed to any mode other than the play mode.
        • When an alarm occurs.
        • When one cycle operation is completed with the END instruction.
        • When the power supply is turned OFF.
4.4.2 Specification for Speed Override in AUTO Cycle Operation

4.4.2.1 Functional Overview

This specification allows the manipulator to temporarily change its operation speed during playback. The operation speed is specified by setting the Speed Override percentage (1 to 100% in increments of 1%) for the operation speed (play speed) specified in the current job. This function also enables an automatic setting of the Speed Override function when changing modes from TEACH to PLAY. Speed Override function can be performed with this specification by setting the parameter S2C701.

4.4.2.2 Setting the Speed Override Function

**NOTE**

Set the mode selection switch to PLAY.

1. Select {JOB} under {Main Menu}, and press {JOB}.

   ![Screen Capture]

   – The PLAYBACK screen appears.

   ![Screen Capture]
4.4 Modifying Play Speed

2. Select {UTILITY} in the Menu Area.

3. Select {SPEED OVERRIDE}.

– The Speed Override setting is enabled. (As shown below, an asterisk **appears beside {SPEED OVERRIDE}, and "SPEED ADJUSTMENT" appears in the input buffer line.)
4. Set the override ratio.
   – 1. Move the cursor to highlight the RATIO edit box.
   – 2. Hold [SHIFT] and press the cursor (up or down) to modify the percentage.

Note: To directly enter the value, perform:
1. Move the cursor to highlight the RATIO edit box, and press [SELECT].
2. Enter the desired percentage using [Numeric Key] pad.
3. Press [ENTER].

5. Setting completed.
4.4 Modifying Play Speed

4.4.2.3 Performing the Speed Override Function

**NOTE**
Set the mode selection switch to PLAY.

1. Start the job.
   – Press [START]
2. Speed Override is executed.
   – The manipulator moves in the specified speed percentage.

4.4.2.4 Modifying the Speed Override Percentage

**NOTE**
- Set the mode selection switch to PLAY.
- This operation can be performed during playback.

1. Modify the override ratio.
   – Highlight the RATIO edit box, and hold [SHIFT] and press the cursor (up or down) when SPEED ADJUSTMENT is displayed in the input buffer line.
   Note: The value is increased or decreased by 1% increments.

2. Modification completed.
   – The manipulator moves in the specified speed percentage.
4.4.2.5 Disabling the Speed Override Function

1. Select {UTILITY} in the Menu Area.

2. Select {"SPEED OVERRIDE"}.

– The Speed Override function is disabled. (As shown below, the asterisk beside {SPEED OVERRIDE} and the "SPEED ADJUSTMENT" input buffer line disappears)

3. Operation completed.
Additionally, the Speed Override function is automatically disabled when:

- Setting the Dry-Run Speed mode.
- Changing the mode to any mode other than PLAY.
- Alarm or error occurs.
- Power is turned OFF.
4.4.2.6 Enabling an Automatic Setting of Speed Override

The function is enabled by setting the parameter S2C702.

This function allows Speed Override to be automatically set when the operation mode is changed from TEACH to PLAY. The percentage corresponds to the manual speed selected during the TEACH mode.

<table>
<thead>
<tr>
<th>Manual Speed</th>
<th>Applicable Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inching</td>
<td>Maximum jog operation link speed x S1CxG045</td>
</tr>
<tr>
<td>Low</td>
<td>Maximum jog operation link speed x S1CxG045</td>
</tr>
<tr>
<td>Medium</td>
<td>Maximum jog operation link speed x S1CxG046</td>
</tr>
<tr>
<td>High</td>
<td>Maximum jog operation link speed x S1CxG047</td>
</tr>
</tbody>
</table>

4.4.2.7 Manual Speed in the TEACH Mode

The function is enabled by setting the parameter S2C699.

The manual speed (inching, low, medium, and high) in the TEACH mode is changed by using [MANUAL SPEED] on the programming pendant.

The manual speed is automatically set at LOW when:

- Changing modes from PLAY to TEACH.
- Changing coordinate system in the TEACH mode.
- Turning OFF the SERVO power in the TEACH mode.

</tr>
</tbody>
</table>
4.4.3 Specification for Speed Override with Input Signals

4.4.3.1 Functional Overview

This specification allows the manipulator to temporarily change its operation speed during playback using the external input signals. The operation speed is specified by setting the speed override percentage (1 to 255% in increments of 1%) for the operation speed (play speed) specified in the current job.

*NOTE*
- The speed override function can be continued in the auto cycle operation.
- The play speed data of the job will not be modified.
- The maximum and minimum manipulator speeds limit the play speed modified by speed override.
### 4.4 Modifying Play Speed

#### 4.4.3.2 Performing the Speed Override Function

1. Playback a job.
2. Input the external signals for Speed Override.
   - The message "Over-riding speed" and the Speed Override percentage appears on the screen.
3. Speed Override is executed.
   - The manipulator moves in the specified speed percentage.

#### 4.4.3.3 Disabling the Speed Override Function

Speed Override is disabled when:
- External signals are OFF.
- Changing modes from PLAY to TEACH.

**NOTE**
- Set the mode selection switch to PLAY.
- Refer to chapter 4.4.3.4 “Parameters” when performing Speed Override with this specification.
### 4.4.3.4 Parameters

<table>
<thead>
<tr>

<tr>
<td>S4C295</td>
<td>Speed percentage (%) Signal 8</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The Override Speed percentage can be specified with the parameters (S4C288 to S4C295) in two ways as follows:

**Setting a Speed Percentage with Respect to Each Signal**

- Specify the speed percentage 1 to 255 in the parameters (S4C288 to S4C295). As to the speed percentage for unused signals, set "0": Speed Override will not take effect even when the external signals are input.
- The signal priority is: "Signal 1 > Signal 8". For example, when the signals 1 to 3 are input simultaneously, Speed Override will be performed applying the speed percentage of signal 1.

**Using Eight Points of External Signals as the Speed Percentage Data**

- Set "0" for all the parameters (S4C288 to S4C295).
- Speed Override will be performed applying the input status of signals 1 to 255 as the speed percentage. For example, when the signals 5 and 7 are input simultaneously, Speed Override will be performed applying 80% of the speed percentage.

**NOTE**
When this function is enabled, Speed Override cannot be operated with a programming pendant.
4.5 Playback with Reserved Start

4.5.1 Preparation for Reserved Start

In the reserved start function, jobs registered at different stations are played back in the reserved order using the start buttons on the stations.

For example, in the case where three stations handle three different workpieces, as shown in the illustration above, the jobs would be registered as follows:

- Job 1 is registered to process workpiece 1 at Station 1
- Job 2 is registered to process workpiece 2 at Station 2
- Job 3 is registered to process workpiece 3 at Station 3

To play back the jobs, prepare workpiece 1 and press the start button on Station 1. The manipulator executes Job 1. Prepare workpieces 2 and 3 while Job 1 is being executed, and press the start buttons on Stations 2 and 3. Even if Job 1 is being executed at that time, jobs on different stations are reserved in the order that the start buttons have been pressed, and will be executed in that order. During playback, the status of the reservation can be checked on the start reservation window.
4.5 Playback with Reserved Start

4.5.1.1 Enabling Reserved Start

The start button on the station is operative when the reserved start function is enabled, and the following start operations are disabled.

- [START] on the programming pendant
- Start operation from external input signal (system input)

NOTE
The OPERATING CONDITION window is shown only when the security mode is management mode.

1. Select {SETUP} under {Main Menu}.
2. Select {OPERATE COND}.
   - The OPERATING CONDITION window appears.
   - The screen is scrolled up/down by the cursor when it locates at the top/bottom of the items.

3. Select "RESERVED START".
   - Each time [SELECT] is pressed, "PERMIT" and "PROHIBIT" alternate. Select "PERMIT".
4.5 Playback with Reserved Start

4.5.1.2 Registering Reserved Start I/O Signal

Register the start I/O signal as a preparation to perform the start operation from the station.

**NOTE**

- When the reserved start is enabled, the external start and the programming pendant start are prohibited even if setting is "PERMIT". Regardless of the operation cycle selected, it is automatically set to 1 CYCLE.

- This operation can be done only when the operation mode is the teach mode and the security mode is the management mode, and only when the setting of "RESERVED START JOB CHANGE" is "PERMIT" in the OPERATING CONDITION window.

1. Select (SETUP) under (Main Menu).
2. Select (RES. START(CNCT)).
   - The RESERVED START (CNCT) window appears.
3. Select “START IN” or “START OUT” for each station.
   – The number can now be entered.
4. Input signal number and press [ENTER].
   – The input/output signal number is registered.
4.5.1.3 Registering Jobs to Stations

Register the starting job of each station.

**NOTE**
This operation can be done only when the operation mode is the teach mode and the setting of "RESERVED START JOB CHANGE" is "PERMIT" in the OPERATING CONDITION window.

1. Select (JOB) under (Main Menu).
2. Select (RES. START(JOB)).
   – The RESERVED START (JOB) window appears.
   – ● indicates that the input/output number is registered.
   – ○ indicates that the input/output number is not registered.
3. Select the job name for each station.
   – The selection dialog box appears.
4. Select "SETTING START JOB".
   – The JOB LIST window appears.
5. Select a job.
4.5 Playback with Reserved Start

- The starting job is registered.
4.5 Playback with Reserved Start

### 4.5.1.4 Deleting Registered Jobs from Stations

Delete the registered job of each station.

**NOTE**

This operation can be done only when the operation mode is the teach mode and the setting of “RESERVED START JOB CHANGE” is “PERMIT” in the operation condition display.

1. Select (JOB) under (Main Menu).
2. Select (RES. START(JOB)).
   - The RESERVED START (JOB) window appears.
3. Select the job name of the station to be deleted.
   - The selection dialog box appears.
4. Select “CANCEL START JOB”.
   - The registered job is deleted.
4.5.2 Playback from Reserved Start

4.5.2.1 Start Operation

1. Set the mode switch to “PLAY”.
2. Press start button on the station.
   - The job registered for the station starts up and the manipulator performs one cycle operation.

   **NOTE**
   - While the job is being executed, the start button lamp on the station lamps.
   - If the workpiece must be prepared at the station, prepare it before pressing the start button.
   - During the execution of a job for one station, if the start button of another station is pressed, the job of the latter station is reserved and prepared to start. Jobs are reserved and executed in the order that the start buttons have been pressed.
   - When a job is reserved, the start button lamp on the station blinks.
   - No station job is reserved when it is being executed even if its start button is pressed.
   - To suspend a job being executed, perform the Hold operation.

   Reservations are cancelled when the start button is pressed again during the job reservation operation.
4.5.2.2 Checking Job Reservation Status

The job reservation status during playback can be checked.
1. Select {JOB} under {Main Menu}.
2. Select {RES. STATUS}.
   
   The RESERVATION STATUS window appears.

A. STATUS

Reservation status is displayed.
- STARTING: Indicates the station currently working.
- STOP: Indicates any station where work has been temporarily stopped by a hold operation.
- RESERVE1, RESERVE2, ...: Indicates the order in which jobs have been reserved for start.

B. START IN

Input signal status is displayed.
- ◯: Input signal ON
- ○: Input signal OFF
4.5 Playback with Reserved Start

4.5.2.3 Resetting Job Reservation

**NOTE**
If “STARTING” is displayed, the job cannot be reset.

1. Select {JOB} on the RESERVATION STATUS window.
2. Select {RESET RESERVATION} or {RESET ALL}.
   - When {RESET RESERVATION} is selected, job reservation stated to “RESERVE” is reset.
   - When {RESET ALL} is selected, job reservation stated to “STOP” and “RESERVE” is reset.

3. Select “YES”.

All job reservations are reset automatically in the following conditions:

**NOTE**
- When the reserved start sets to “PROHIBIT”. (When “RESERVED START” is set to “PROHIBIT” on the OPERATING CONDITION window.)
- When another job is called or an edit operation is performed.
4.5 Playback with Reserved Start

4.5.3 Hold Operation

Hold operation causes the manipulator to stop all motion. It can be performed by the following buttons or signal.

- [HOLD] on the programming pendant
- External Input Signal (system input)
- Hold button for the station axis

1. Press [HOLD] on the programming pendant.
   - The manipulator stops temporarily.
   - The [HOLD] lamp lights while the [HOLD] button is held down.

2. Release

   1. Press the start button on the suspended station.
      - The manipulator restarts its operation from the position where it was stopped.

4.5.3.1 [HOLD] on the Programming Pendant

- **Hold**
  1. Press [HOLD] on the programming pendant.
     - The manipulator stops temporarily.
     - The [HOLD] lamp lights while the [HOLD] button is held down.

- **Release**
  1. Press the start button on the suspended station.
     - The manipulator restarts its operation from the position where it was stopped.

4.5.3.2 Hold by External Input Signal (System Input)

- **Hold**
  1. Input ON signal to the external input (system input) specified for the hold operation.
     - The manipulator stops temporarily.
     - The hold lamp for the external output signal lights.
     - The [HOLD] lamp on the programming pendant lights and the [START] lamp turns OFF.

- **Release**
  1. Input OFF signal to the external input (system input) specified for the hold operation.
     - Hold is released.
  2. To continue the operation, press the start button on the suspended station.
     - The manipulator restarts its operation from the position where it was stopped.
4.5.3.3 Hold at the Station

■ Hold

1. Press the hold button on the station.
   – The manipulator stops temporarily.

■ Release

1. Press the hold button on the suspended station.
   – Hold is released.
   – Press the start button on the station, then the manipulator restarts its operation from the position where it was stopped.

Pressing the start button on a station that is not in the Hold status does not start manipulator operation. The job registered for the station is reserved or the reservation, if it has been made, is canceled.
4.6 Displaying Job Stack

During the execution of the series of jobs that combined with CALL or JUMP instructions, the job stack can be displayed to check where the current job is and how many jobs are left.

Job calls can be used for up to 12 stack levels.
4. Displaying Job Stack

1. Select {DISPLAY} under the menu on the PLAYBACK window.

2. Select {JOB STACK}.
   - The job stack status dialog box appears.
   - To close the job stack status dialog box, select {DISPLAY} and then {JOB STACK} under the menu again.

   For above example, the playback of Job C is being executed and the Job C is called from Job B. Also, the Job B is called from Job A.

   **SUPPLEMENT**

   If any of the following operations are performed, the job stack is canceled.
   - Creating a new job
   - Calling the master job
   - Selecting jobs
   - Copying and renaming jobs
   - Job conversion
     (Relative job conversion, Parallel shift job conversion, Mirror shift job conversion)
   - Editing the job header window
     (Change of axis operation control group, change the coordinate display)
   - Displaying jobs by operating the direct open function
   - The operation of UNDO and REDO
   - Four point teaching
   - Executing TRT
5 Editing Jobs

This section explains how to manage the jobs without moving the manipulator. Copying, deleting, and modifying of the jobs can be done only in the teach mode. Other operations can be done in any mode.

NOTE
Edit operations are restricted when the edit lock is applied.

Editing Move Instructions
See chapter 3 “Teaching” at page 3-1 for basic information on editing move instructions.

• It is not possible to add, delete, or modify move instructions which have position data. See chapter 3.4 “Modifying Steps” at page 3-29 for details.

• The following MOV instruction edit operations are explained in this section:

  For move instructions:
  • Insertion, deletion, or modification of additional items
  • Modification of interpolation type or play speed for move instructions
  • Setting, modification, or deletion of UNTIL statements (interruption conditions based on input signals)
  • Setting and deletion of NWAIT instructions
  For move instructions using position variables:
  • Insertion and deletion of move instruction.

NOTE
Refer to chapter 1.2.6 “Character Input Operation” at page 1-23 for the character input operation.
5.1 Copying Jobs

This operation is used to copy registered jobs and use them to create new jobs. It can be done using either the JOB CONTENT window or the JOB LIST window.

5.1.0.1 Copying Jobs on the JOB CONTENT Window

On the JOB CONTENT window, the current edit job becomes the copy source job.

1. Select {JOB} under {Main Menu}.
2. Select "JOB".
   – The JOB CONTENT window appears.
3. Select "JOB" → "COPY JOB" under the pull-down menu.

4. Input the job name.
   – Input the new job name.
   – The name of the copy source job is displayed on the input area. It is possible to partially change this name to enter a new name.
5. Press [ENTER].
- The confirmation dialog box appears.
- If "YES" is selected, the job is copied and the new job appears.
- If "NO" is selected, the job copy is not executed, and the process is cancelled.

See chapter 1.2.6 "Character Input Operation" at page 1-23 for information on letter input operations.
5 Editing Jobs
5.1 Copying Jobs

5.1.0.2 Copying Jobs on the JOB LIST Window

On the JOB LIST window, select the copy source job from the registered jobs and specify the copy destination directory.

1. Select {JOB} → {SELECT JOB} under {Main Menu}.
   – The JOB LIST window appears.

2. Move the cursor to the copy source job.

3. Select {JOB} → {COPY JOB} under the pull-down menu.

4. Input the job name.
   – Input the new job name.
   – The name of the copy source job is displayed on the input area. It is possible to partially change this name to enter a new name.

See chapter 1.2.6 “Character Input Operation” at page 1-23 for information on letter input operations.
5. Press [ENTER].
   - The confirmation dialog box appears.
   - If “YES” is selected, the job is copied and the new job appears.
   - If “NO” is selected, the job copy is not executed, and the process is cancelled.
5 Editing Jobs
5.2 Deleting Jobs

This operation is used to delete jobs that are registered on the DX200. It can be performed in either the JOB CONTENT window or the JOB LIST window.

5.2.0.1 Deleting Jobs on the JOB CONTENT Window

On the JOB CONTENT window, the current edit job is deleted.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   - The JOB CONTENT window appears.
3. Select {JOB} → {DELETE JOB} under the pull-down menu.
4. Press “YES”.
   - The confirmation dialog box appears.
   - When “YES” is selected, the edit job is deleted. When deletion is completed, the {JOB LIST} window appears.
   - When “NO” is selected, the job deletion is cancelled.
5.2 Deleting Jobs

5.2.0.2 Deleting Jobs on the JOB LIST Window

On the JOB LIST window, select the job to be deleted from the list of the registered jobs.

1. Select {JOB} → {SELECT JOB} under {Main Menu}.
   - The JOB LIST window appears.

2. Move the cursor to the job to be deleted.

3. Select {JOB} → {DELETE JOB} under the pull-down menu.

4. Press “YES”.
   - The confirmation dialog box appears.
   - When “YES” is selected, the selected job is deleted. When deletion is completed, the JOB LIST window appears.
   - If “NO” or [CANCEL] is selected, the job deletion is cancelled and the JOB LIST window appears.

To select all the registered jobs at a time, select (EDIT) from the menu and then select “SELECT ALL”. 

5.3 Modifying Job Names

This operation is used to modify the name of a job that is registered. The operation can be performed in either the JOB CONTENT window or the JOB LIST window.

5.3.0.1 Modifying Job Names on the JOB CONTENT Window

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   - The JOB CONTENT window appears.
3. Select {JOB} → {RENAME JOB} under the pull-down menu.
4. Input the job name.
   - Input the new job name.
   - The name of the source job is displayed on the input area. It is possible to partially change this name to enter a new name.

See chapter 1.2.6 “Character Input Operation” at page 1-23 for information on letter input operations.
5. Press [ENTER].

- The confirmation dialog box appears.
- When "YES" is selected, the job name is changed and a new job name is displayed.
- When "NO" is selected, the job name is not changed, and the process is cancelled.
5.3 Modifying Job Names

5.3.0.2 Modifying Job Names on the JOB LIST Window

On the JOB LIST window, select the job whose name is to be modified from the list of the registered jobs.

1. Select {JOB} \(\rightarrow\) {SELECT JOB} under {Main Menu}.
   – The JOB LIST window appears.

2. Move the cursor to the name to be changed.

3. Select {JOB} \(\rightarrow\) {RENAME JOB} under the pull-down menu.

4. Input the job name.
   – Input the new job name.
   – The name of the source job is displayed on the input area. It is possible to partially change this name to enter a new name.

   See chapter 1.2.6 “Character Input Operation” at page 1-23 for information on letter input operations.

5. Press [ENTER].
   – The confirmation dialog box appears.
   – When “YES” is selected, the job name is changed and a new job name is displayed.
5 Editing Jobs
5.3 Modifying Job Names

- When "NO" is selected, the job name is not changed, and the process is cancelled.
5.4 Editing Comments

Comments of up to 32 characters can be added to each job to identify each job more specifically. Comments are displayed and edited on the JOB HEADER window.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the pull-down menu.
4. Select {JOB HEADER}.
   - The JOB HEADER window appears.
5. Select “COMMENT”.
   - The window for character input appears.
6. Input comments.
   - Input comments.
   - For the jobs that are already registered, comments are displayed on the input area. It is possible to partially change comments to enter new comments.

See chapter 1.2.6 “Character Input Operation” at page 1-23 for information on letter input operations.
5 Editing Jobs
5.4 Editing Comments

7. Press [ENTER].

– The comment on the input area is registered and is displayed on the “COMMENT” area in the JOB HEADER window.
5.5 Job Folder Function

This function enables to classify the jobs in each folder. The jobs can be classified and displayed, so the visibility improves. Up to 100 folders, including NONE (no folders), can be registered to this function. For the folder name, up to 32 one-byte characters can be used. However, the name of NONE (no folders) cannot be changed.

5.5.1 Displaying Jobs by Folders

5.5.1.1 Operation for Displaying Jobs by Folders

For displaying the jobs by folders, follow the procedures below.

1. Display the {JOB LIST} window.

2. Select {DISPLAY} → {FOLDER} under the pull-down menu.
5 Editing Jobs
5.5 Job Folder Function

- The folder name is displayed at the head of each job.

- Pressing [SELECT] at the folder name enables to hide the jobs registered in the folder.

- On the {JOB LIST} window in which the jobs are displayed by folders, the folders with no jobs are not displayed.

- When the cursor is moved to the folder name while the job details are displayed, all the information is displayed as asterisks "*".
5.5.2 Operation for Canceling Displaying Jobs by Folders

For canceling displaying the jobs by folders, follow the procedures below.

1. Display the {JOB LIST} window.

2. Select {DISPLAY} → {*FOLDER} under the pull-down menu.

– The folder name disappears, and only the JOB names are displayed.
5.5.2 Registering Jobs in Folders

This section explains how to set the jobs to the specified folders. A job can be set in the specified folder when creating a new job or by changing the folder after the job creation.

5.5.2.1 Registering Jobs in Folders (At a New Job Creation)

1. Display the {NEW JOB CREATE} window.

   ![NEW JOB CREATE Window]

2. Move the cursor to the folder name field, and then press [SELECT].
   
   - The {JOB FOLDER LIST} is displayed.
5 Editing Jobs
5.5 Job Folder Function

3. Move the cursor to the folder name to select, and then press [SELECT].
   – The selected folder name is displayed in the folder name field.

4. Press [ENTER].
   – A JOB is created.

The folder name is set as NONE or FOLDER001 to 099 before shipment.
### 5.5.2.2 Changing the Folder Registration of Jobs

The folder in which the created job is registered can be changed to the other folder.

- **When changing the folder of one job**
  1. Display the {JOB LIST} window.
  2. Move the cursor to the job whose registered folder is to be changed.
  3. Select {JOB} → {FOLDER CHANGE} under the pull-down menu.
     - The {JOB FOLDER LIST} window appears.
  4. Move the cursor to the folder name to which the job is to be moved, and press [SELECT].
5 Editing Jobs
5.5 Job Folder Function

- The job is moved to the specified folder.

**When changing the folder of multiple jobs**

1. Display the (JOB LIST) window.
2. Move the cursor to the job whose registered folder is to be changed.
3. Press [SHIFT] + [SELECT] to select the job.

- Select all jobs to be changed.
5 Editing Jobs
5.5 Job Folder Function

4. Select (JOB) → {FOLDER CHANGE} under the pull-down menu.

- The {JOB FOLDER LIST} is displayed.

5. Move the cursor to the folder name to which the job is to be moved, and press [SELECT].

- The jobs are moved to the specified folder.
When loading a job from an external memory device, if the loaded job has a folder name and the same name does not exist in the folder names registered in the controller, the folder name of the loaded job will automatically be registered. However, it is necessary to meet the following requirement:

Requirement: Among the 99 folder names except for NONE, there should be a folder with the default value name in which any jobs are not registered.

If there are no folders which meet this requirement, the folder name of the loaded job will be registered to NONE.

When the bilingual function is activated:

• Respective folder names can be registered to the first and second languages.
  
  Example:
  
  The following folder names can be set to FOLDER001:
  
  First language: "FOLDER 1"
  
  Second language: "FOLDER-1"

• When the name of the folder to which the jobs are loaded from an external device is automatically registered, the language of the folder name depends on the language used at loading.
5.5 Job Folder Function

5.5.3 Changing the Folder Name

5.5.3.1 Changing the Folder Name While Displaying Folder List Window

1. Display the {JOB FOLDER LIST} window.
2. Move the cursor to the folder name to be changed.
3. Select {DATA} → {RENAME(FOLDER)} in the sub-menu.
4. Input the new name of the folder.

– The folder name will be changed.
– The folder name of the job registered in the folder will also be changed.
5.5.3.2 Changing the Folder Name While Displaying Jobs by Folders in Job List Window

1. Display the jobs by folders in the (JOB LIST) window.
2. Move the cursor to the folder name to be changed.
3. Select {JOB} → {RENAME(FOLDER)} in the sub-menu.

4. Input the new name of the folder.

- The folder name will be changed.
- The folder name of the job registered in the folder will also be changed.
5.5.4 Changing the Display Order While Displaying Jobs by Folders

The order of the jobs can be changed while the jobs are displayed by folders.

Displaying by name

1. Select {DISPLAY} → {NAME} in the sub-menu.

The jobs are displayed in name order for each folder.
Displaying by date

1. Select {DISPLAY} → {DATE} in the sub-menu.

- The jobs are displayed in date order for each folder.
5.6 Setting Edit Lock on Individual Job Units

In order to prevent inadvertent changes in the registered jobs or data, it is possible to set the edit lock to each job. When the edit lock is ON, the job cannot be edited or deleted.

The edit lock can be set and canceled on the {JOB HEADER} window.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the pull-down menu.
4. Select {JOB HEADER}.
   – The JOB HEADER window appears.
5. Select “EDIT LOCK” and set the edit prohibit.
   – Each time [SELECT] is pressed, the setting alternates between “ON” (edit disabled) and “OFF” (edit enabled).

SUPPLEMENT

Setting of the edit lock can be changed only when the security mode is in the management mode or higher.
5.7 Enabling the Modification of Position Data Only

Even in the edit-locked job, the position data can be modified.

1. Select {SETUP} under {Main Menu}.

2. Select {TEACHING CONDITION SETTING}.
   – The {TEACHING CONDITION SETTING} window appears.

3. Select "STEP ONLY CHANGING" and press [SELECT].
   – Each time [SELECT] is pressed, the setting alternates between "PROHIBIT" and "PERMIT".

SUPPLEMENT

The {TEACHING CONDITION SETTING} window is shown only when the security mode is edit mode or management mode.
5.8 Prohibit Displaying the Contents of a Job

Contents of a job can be nondisclosed on a job base. The job whose contents are set to be nondisclosed, “Invisible” is displayed instead of each job except NOP instruction, which comes to the first line of the job, and END instruction, which comes to the last line. (Setting the contents display is available in the software version DN1.91-00 or later.)

For the job whose contents are set to be displayed, only the name of the job and its control group are displayed on the JOB CONTENT:MASTER window.

Also, the following operations are limited.

- Job editing operation (adding, changing, deleting) cannot be operated.
- The job cannot be deleted, copied, or changed the names.
- Direct open cannot display the contents of the instructions.
- The command position does not appear on the COMMAND POSITION window.
- The job cannot be set as the target of the job conversion.
- The job cannot be edited during playback.

The contents display setting can be done on the JOB HEADER window to each job.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the pull-down menu.
4. Select {JOB HEADER}.

   - The JOB HEADER window appears.

3. Select {DISPLAY} under the pull-down menu.
4. Select {JOB HEADER}.

   - The JOB HEADER window appears.
5 Editing Jobs

5.8 Prohibit Displaying the Contents of a Job

5. Select \{CONTENTS DISPLAY\} and set "PROHIBIT".

The contents display of a job can be changed only when the security mode is in the management mode or higher.

When "PROHIBIT" is set to \{CONTENTS DISPLAY\}, the contents of capacity, lines, steps and the number of local variables (Only when expanding the "INSTRUCTION LEVEL") are not displayed on the JOB HEADER window.

Even if "PROHIBIT" is set to \{CONTENTS DISPLAY\}, comment, job folder, edit lock and save job can be changed when the edit lock is "ON".

6. Select \{DISPLAY\} under the pull-down menu.
5 Editing Jobs
5.8 Prohibit Displaying the Contents of a Job

7. Select (JOB).

- The JOB CONTENT window appears. “Invisible” is displayed instead of each job except NOP instruction, which comes to the first line of the job, and End instruction, which comes to the last line, and instructions are displayed in black regardless of the display color condition setting. (Refer to chapter 6.11 “Instruction Displaying Color Setting Function” for the display color condition setting.) The step No. and the tool No. are displayed on the general-purpose display area as asterisks " * ".

NOTE

Edit operation cannot be conducted for the job whose contents are set to be nondisclosed.

Jobs whose contents can be modified during the playback operation, such as a job in the speed modification operation to a move instruction in the speed override function, are possible to be modified even if “PROHIBIT” is set to {CONTENT DISPLAY}. (Refer to chapter 4.4 “Modifying Play Speed” for the speed override function.)

To prohibit modifying a job during playback, set “ON” to {EDIT LOCK}. (Refer to chapter 5.6 “Setting Edit Lock on Individual Job Units” for setting “ON” to {EDIT LOCK}).

To prohibit saving a job data, to which “PROHIBIT” is set to its (CONTENT DISPLAY) item, to an external memory device, set “PROHIBIT” to {TO SAVE TO FD}.

Refer to chapter 5.9 “Prohibit: Saving The Job Data” for setting “PROHIBIT” to {SAVE JOB}.
5 Editing Jobs
5.9 Prohibit: Saving The Job Data

Data saving can be prohibited on a job base to prevent the job of the DX200 from being saved to the external memory device. (Setting the save job is available in the software version DN1.91-00 or later.)

Setting "PROHIBIT" to (SAVE JOB) can be set on the JOB HEADER window of each job.

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
3. Select {DISPLAY} under the pull-down menu.
4. Select {JOB HEADER}.
   – The JOB HEADER window appears.

5. Select {SAVE JOB} and set “PROHIBIT”.

6. The job “PROHIBIT” is set to {SAVE JOB} cannot be saved to the external memory device.

   Refer to chapter 7.3.0.2 “Saving Data” for saving job data in an external memory device.

   When saving a job to which "PROHIBIT" is set to {SAVE JOB} by using data transmission function, high-speed Ethernet server function, FTP function and MotoPlus function, an error occurs and it cannot be saved. (ERROR 2110 “This data cannot be accessed”.)

The save job setting can be changed only when the security mode is in the management mode or higher.

To prohibit displaying of the contents of a job, to which “PROHIBIT” is set to (JOB SAVE), set “PROHIBIT” to (CONTENTS DISPLAY).

Refer to chapter 5.8 “Prohibit Displaying the Contents of a Job” for setting the displaying of a job contents.
6 Convenient Functions

6.1 One-touch Operation “Direct Open”

The direct open function immediately shows the JOB CONTENT window or condition file contents of a job called by the CALL instruction. Move the cursor to the desired job name or condition file name and simply press [DIRECT OPEN] to display the contents of the file. This function can be used for the following window:

- JOB CONTENT window for a job name directly specified by a CALL instruction
- CONDITION FILE window for a file name directly specified by a work instruction
- COMMAND POS window for a move instruction
- I/O window with an I/O instruction (when I/O numbers are specified)

<Example> Example Using Direct Open

![Diagram showing examples of using Direct Open with different windows: COMMAND POS, USER OUTPUT, WEAVING CONDITION, and JOB CONTENT for "JOB-C".]
6 Convenient Functions
6.1 One-touch Operation “Direct Open”

1. In the JOB CONTENT window, move the cursor to the job name or the condition file for which the window is to be displayed.
2. Press [DIRECT OPEN].
   - This key lamp lights and the JOB CONTENT window or the condition file window appears.
   - When [DIRECT OPEN] is pressed once again, the key lamp turns OFF, and the window returns to the former JOB CONTENT window.

NOTE
• The direct open function cannot be used again while a directly opened window is shown.
• If another window is selected while the direct open function is effective, the function is automatically cancelled and the lamp on the direct open key goes out.
• Once another JOB CONTENT window is opened by the direct open function, the former job cannot be continuously operated. (Stopped until the opened JOB CONTENT window is closed.)
6.2 Parallel Shift Function

6.2.1 Function Overview

Parallel shift refers to the shifting of an object from a fixed position in such a way that all points within the object move an equal distance. In the model for parallel shift shown in the following, the shift value can be defined as the distance \( L \) (three-dimensional coordinate displacement). The parallel shift function is relevant to the actual operation of the manipulator because it can be used to reduce the amount of work involved in teaching by shifting a taught path (or position).

In the example in the figure below, the taught position A is shifted in increments of the distance \( L \) (this is actually a three-dimensional XYZ displacement that can be recognized by the robot) in order to enable the operation that was taught at position A to also be performed at positions B through G.
6 Convenient Functions
6.2 Parallel Shift Function

6.2.1.1 Parallel Shift of Step

The block from the SFTON to the SFTOF instructions is subject to the shift operation.

Shifted block

6.2.1.2 Parallel Shift of Job

When shifting an entire series of operations, the range to be shifted by the shift instruction can be set using the method indicated above, but the method shown in the following, in which just the part to be shifted is made into a separate job, can also be used.

... SFTON P □□□ □□□□

CALL JOB: □□□□ □□□ □□□□

Job to perform the shifting
6 Convenient Functions
6.2 Parallel Shift Function

6.2.2 Setting the Shift Value

6.2.2.1 Coordinate Systems

The shift value for parallel shift is X, Y, and Z increment in each coordinate. There are four coordinates: base coordinates, robot coordinates, tool coordinates, and user coordinates. In systems with no servo track, the base coordinates and robot coordinates are the same. Also, the teaching line coordinates system cannot be used.

When setting the shift value for the position variables, use the current position (coordinates) of the manipulator in the window.

Position to be shifted
(Move the manipulator using the programming pendant.)

The difference between them is the shift value.
The shift value is the X, Y, and Z difference between the shift position and teaching position and the difference in angular displacement RX, RY, and RZ (normally set at "0"). If shifting is executed at equal pitch intervals, for example for pelletizing, find the difference between the teaching position and the final shift position, then divide by the number of pitch intervals (number of divisions) to calculate the shift value per pitch.

The posture of the wrist is defined by the angular displacement of the coordinates of the wrist axes. Consequently, if the shift value is specified with X, Y, and Z only (RX, RY, RZ=0), the wrist is shifted while maintaining the same posture as at the teaching point. Since shifting is normally performed without changing the posture, there is no need to specify an angular displacement for the wrist. The motion when a parallel shift is performed is shown in the following:

The shift value is calculated on the position data window for the coordinates in which the shift is performed. Since this is normally performed in the user coordinates, the position data window for the user coordinates is used.
6.2.3 Registering Shift Instructions

To register the instruction, move the cursor to the address area in the JOB CONTENT window during teach mode as follows:

1. Select (JOB) under {Main Menu}.
2. Select (JOB).
   - The JOB CONTENT window appears.
3. Move the cursor to the address area.
6 Convenient Functions

6.2 Parallel Shift Function

6.2.3.1 SFTON Instruction

This is the instruction that starts a parallel shift.

1. Move the cursor to the line immediately before where the SFTON instruction is to be registered.

   Line immediately before where SFTON instruction is to be registered.

   0001 MOVJ VJ=50.00
   0002 MOVL V=138
   0003 MOVL V=138

2. Press [INFORM LIST].
   - The instruction list dialog box appears.

3. Select {SHIFT}.
4. Select the SFTON instruction.
   - The SFTON instruction is displayed in the input buffer line.
5. Modify the additional items or number values as required.
   - <When Nothing is to be Changed>
     Proceed to Step 6.
   - <When Editing Additional Items>
     • Adding or modifying additional items
     To change the position variable number, move the cursor to the position variable number and press [SHIFT] + the cursor to increase or decrease the value.

   To directly input the value using the [Numeric Key]s, press [SELECT] to display the input buffer line.
6 Convenient Functions
6.2 Parallel Shift Function

After the number is input, press [ENTER] to modify the number value in the input buffer line.

- Adding the coordinate system in which the shift is performed
  Move the cursor to the instruction in the input buffer line and press [SELECT]. The DETAIL EDIT window appears.

  ![Image of DETAIL EDIT window]

  - Line up the cursor with "UNUSED" and press [SELECT]. The selection dialog box appears. Line up the cursor with the coordinate system to be added, and press [SELECT].

  ![Image of selection dialog box]

  - After the coordinate system addition is completed, press [ENTER]. The DETAIL EDIT window closes and the JOB CONTENT window appears.

6. Press [INSERT] and then [ENTER].

- The instruction displayed in the input buffer line is registered.

  ![Image of instruction registration]

  Line where SFTON instruction is registered.
6 Convenient Functions
6.2 Parallel Shift Function

6.2.3.2 SFTOF Instruction

This is the instruction that ends a parallel shift.

1. Move the cursor to the line immediately before where the SFTOF instruction is to be registered.

2. Press [INFORM LIST].
   – The instruction list dialog box appears.

3. Select {SHIFT}.

4. Select the SFTOF instruction.
   – The SFTOF instruction is displayed in the input buffer line.

5. Press [INSERT] and then [ENTER].
   – The SFTOF instruction is registered.
6 Convenient Functions
6.2 Parallel Shift Function

6.2.3.3 MSHIFT Instruction

When a parallel shift of the wrist posture is attempted, the manipulator may not be shifted to the target posture in the following cases.

- Posture displacement (Rx, Ry, Rz) is specified to the shift value set by the user.
- When a displacement between two points is calculated using an INFORM operating instruction (ADD instruction, SUB instruction, etc.), and a posture displacement (Rx, Ry, Rz) is specified in the shift value.

In such cases, the MSHIFT instruction can be used to automatically calculate the optimum shift value for an operation to reach the target shift position and posture. With an MSHIFT instruction, the shift value between the reference position and the target position (shift position) when the parallel shift is performed is determined in the specified coordinate system, and set as the specified position variable.

1. Move the cursor to the line immediately before where the MSHIFT instruction is to be registered.

2. Press [INFORM LIST].

   - The instruction list dialog box appears.

3. Select (SHIFT).

4. Select the MSHIFT instruction.

   - The MSHIFT instruction is displayed in the input buffer line.

5. Change the number data or additional items as required.

   - <When Nothing is to be Changed>
     Proceed to Step 6.

   - <When Editing Additional Items>
     - Adding or modifying additional items
       To change the position variable number, move the cursor to the position variable number and press [SHIFT] + the cursor to increase or decrease the value.
       🔄 MSHIFT PX000 BF PX001 PX002
6 Convenient Functions
6.2 Parallel Shift Function

– To directly input the value using the [Numeric Key]s, press [SELECT] to display the input buffer line.

```
PX = MSHIFT  BF PX001 PX002
```

– After the number is input, press [ENTER] to modify the number value in the input buffer line.

– Changing the coordinate system in which the shift is performed
Move the cursor to the instruction in the input buffer line and press [SELECT]. The DETAIL EDIT window appears.

```
= MSHIFT PX000 BF PX001 PX002
```

– Line up the cursor with “BF” and press [SELECT]. The selection dialog box appears. Line up the cursor with the coordinate system to be changed, and press [SELECT].

– After the coordinate system modification is complete, press [ENTER]. The DETAIL EDIT window closes and the JOB CONTENT window appears.

6. Press [INSERT] and then [ENTER].

– The instruction displayed in the input buffer line is registered.

```
Line where MSHIFT is registered.
0006 GETS PX000 $PX000
0007 MSHIFT PX000 RF PX001 PX002
0008 DOUT OT#(1) ON
```
6.2 Parallel Shift Function

6.2.4 Continuation of the Parallel Shift Function

If any of the following operations are performed after executing a parallel shift instruction, the shift function is cancelled.

- Job editing operation (changing, deleting, adding)
- Job copy, job name change
- Registering a new job, deleting a job, or modifying a selected job
- Restart after the alarm occurs
- When control power is turned OFF

NOTE

With any operation other than those listed above, the parallel shift function remains in effect.
6 Convenient Functions
6.2 Parallel Shift Function

6.2.5 Parallel Shift Function Operation Method

When a parallel shift is performed, there are several ways to move to the step position. The following three methods can be used to designate the way to move.

- **Previous Step Regarded (Constant B-axis sign)**
  Effective when a job in which the B-axis does not pass the point 0° is performed. (i.e., the operation in which the B-axis always faces downward)

- **Previous Step Regarded (Minimum R-axis movement)**
  Effective when a job in which the B-axis passes the point 0° is performed.

- **Type Regarded**
  Effective when a job created by off-line teaching is performed.

The operation method can be specified by the following parameter.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Settings</th>
<th>Initial value</th>
</tr>
</thead>
<tbody>
<tr>
<td>S2C439</td>
<td>0: Previous step regarded (Constant B-axis sign) 1: Type Regarded 2: Previous Step Regarded (Minimum R-axis movement)</td>

6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

6.3.1 Function Overview

If the manipulator and base positions are moved after a job has been taught, the entire job has to be modified. The parallel shift conversion function shortens the modification time required in cases like this by shifting all steps of the job by the same value to create a new job.

When the parallel shift conversion is performed, all job steps are shifted by the same value.

Steps Outside the P-point Maximum Envelope

- “/OV” is added to the step when its position exceeds the P-point maximum envelope due to this conversion. At this time, the position after conversion is taught if the pulse limit is exceeded. If the interpolation motion is impossible, when the position is taught by the pulse value, the pulse value before conversion is taught, and when the position is taught by the XYZ value, the XYZ value after conversion is taught. When the position is corrected, “/OV” display disappears.

Position Variable

- Position variables are not subject to the parallel shift job conversion.

Not Converted Job

- The following jobs cannot be converted. If conversion is attempted, no operation is performed.
  - Jobs without any group axes
  - Concurrent jobs (optional)

CAUTION

- If a job name after conversion is not specified when executing the parallel shift job conversion, the position data of the job is shifted and converted, then the data is overwritten with a new position data after the shift. Be sure to save the job in the external memory device or create the same job by copying before executing conversion.
6.3.2 Coordinate Systems for Conversion

When performing the parallel shift job conversion, it is necessary to specify the coordinate systems in which the conversion is to be performed. The coordinate system can be selected from the following:

- Base coordinates
- Robot coordinates
- Tool coordinates
- User coordinates (64 types)
- Master tool coordinates (R^+R^ job)
- Pulse coordinates

In the case of an ordinary job for which group axes are registered, shift conversion is performed in accordance with the selected coordinate system. The relationship between group combinations and coordinates are shown in the following table.

1 to 4 in the table are followed by their explanations.

<table>
<thead>
<tr>
<th>Group Combination in Job</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

<td></td>
</tr>
</tbody>
</table>

¹ In the master tool coordinates, conversion only occurs at the “slave” from the standpoint of the SMOV instruction.

About 1 to 4 in the Table

1. Base Coordinates
   The base axis is shifted by B and the TCP of the manipulator is shifted by A in the base coordinates.
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

2. **Robot Coordinates**
The base axis is shifted by B. The TCP of the manipulator is shifted by A in the robot coordinates. These shifts are carried out independently.

3. **Tool Coordinates**
The base axis is shifted by B and the TCP of the manipulator is shifted by A in the tool coordinates. These shifts are carried out independently.

4. **User Coordinates**
The base axis is shifted by B and the TCP of the manipulator is shifted by A in the user coordinates. These shifts are carried out independently.
Converting R*+R* Jobs with Master Tool Coordinates

R*+R* coordinated jobs can be subjected to the parallel shift job conversion in the master tool coordinates. Only the steps taken at the "slave" from the standpoint of the SMOV instruction are subject to conversion (i.e. the steps of R2 in the figure below).

![Diagram showing R1 (Master) and R2 (Slave) with master tool coordinates and motion path after conversion]
6.3 Parallel Shift Job Conversion Function

6.3.3 Executing the Parallel Shift Job Conversion

6.3.3.1 Window Display

A. SOURCE JOB
Selects the job before conversion. The job which is shown in the JOB CONTENT window is set initially. To change the job, perform the following procedure.
Move the cursor to the job name and press [SELECT]. The JOB LIST window appears. Select the desired job.

B. STEP SECTION (Start Step → End Step)
Specifies the step section of the source job. All the steps are set initially. If there is no step in the source job, "***" is displayed. To change the section, perform the following procedure.
Move the cursor to the step section indication and press [SELECT]. The input buffer line appears. Input the step number and press [ENTER].

C. DESTINATION JOB
Specifies the converted job. If this is not specified ("*******" is displayed), the source job is overwritten with a job after conversion. If the converted job is specified, the source job is copied and converted. To change the job, perform the following procedure.
Move the cursor to the converted job name indication and press [SELECT]. The character input line appears. The source job name is displayed in the input line. To enter a job name without using the source job name, press [CANCEL] and then input a job name.

D. COORDINATES
Selects the conversion coordinates. Move the cursor to the coordinates name and press [SELECT]. The selection dialog box appears. Select the desired coordinates.
When the user coordinates are selected, the input buffer line appears. Input the desired user coordinate number and press [ENTER].
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

E. BASE POINT
Calculates the difference by the two teaching points as a shift value.

F. SHIFT VALUE
The axis shown is varied according to the setting of “4. coordinates” above.
Move the cursor to the input box and press [SELECT] to directly input the shift value.
If the shift value is calculated by the two teaching points, the difference is shown as a shift value.
6.3.3.2 Parallel Shift Job Conversion Operation

There are two methods for specifying the shift value.

- Directly input the shift value by numerical value.
- Calculate the shift value by teaching the original base point and converted base point.

The method using position variables by parameter setting is described in chapter 6.3.4 “Specifying the Shift Value by Position Variables” at page 6-30 other than above two methods.

The following are the operation procedures by each setting of shift value for parallel shift job conversion.

**Numerical Value Input**

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   - The JOB CONTENT window appears.
3. Select {UTILITY} under the pull-down menu.
4. Select {PARALLEL SHIFT JOB}.
   - The PARALLEL SHIFT JOB window appears.

5. Specify the conversion items.
   - Specify each item.
6. Select the shift value to be set.
   – The number can be entered.

7. Type the shift value using [Numeric Key]s.

8. Press [ENTER].
   – The shift value is set.

9. Display the PARALLEL SHIFT JOB window. Select “EXECUTE”.
   – The confirmation dialog box appears when the converted job is not specified. Select “YES” then the conversion is executed.
   – The JOB CONTENT window appears when the conversion is completed.
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

– When “CANCEL” is selected, the display goes back to the JOB CONTENT window without executing conversion.

**NOTE**
If an alarm occurs during conversion, conversion is suspended.
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

Calculation by Teaching

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   – The JOB CONTENT window appears.
3. Select {UTILITY} under the pull-down menu.
4. Select {PARALLEL SHIFT JOB}.
   – The PARALLEL SHIFT JOB window appears.
5. Specify the conversion items.
   – Specify each item.
6. Display the PARALLEL SHIFT JOB window. Select “TEACH SETTING” in the item of “BASE POINT”.
   – The BASE POINT window appears.
7. Select “BASE POINT(SRC)”.
8. Move the manipulator to the original base point by the [Axis Key]s.
9. Press [MODIFY] and [ENTER].
   – The original base point is set.

10. Select “BASE POINT(DEST)”.
11. Move the manipulator to the converted base point by the [Axis Key]s.
12. Press [MODIFY] and [ENTER].
   – The conversion base point is set.

13. Touch “EXECUTE”.
   – The difference is calculated by the two teaching points and set as a shift value.
14. Display the PARALLEL SHIFT JOB window. Select “EXECUTE”.
   - The confirmation dialog box appears when the converted job is not specified. Select “YES” then the conversion is executed.
   - The JOB CONTENT window appears when the conversion is completed.
   - When “CANCEL” is selected, the display goes back to the JOB CONTENT window without executing conversion.

**NOTE** If an alarm occurs during conversion, conversion is suspended.
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

6.3.4 Specifying the Shift Value by Position Variables

The shift value can be specified using position variables by parameter settings.

Parameter S2C652: SHIFT VALUE FOR PARALLEL SHIFT JOB CONVERSION
0: Shift value by numeral/teaching (Initial setting)
1: Position variable shift value

6.3.4.1 Window Display

A. FILE NO.
Specifies position variables.

B. SHIFT JOB NAME
The job which was shown in the JOB CONTENT window is set initially. To change the job, perform the following procedure. Move the cursor to the conversion job name and press [SELECT]. The JOB LIST window appears. Move the cursor to the desired job and press [SELECT]. The PARALLEL SHIFT JOB window reappears, and the job name which was selected is shown.

C. MODE
Specifies the conversion mode.
SINGLE (INDEPENDENT JOB CONVERSION)
Only the selected job is converted even if the selected job includes the jobs called by JUMP or CALL instructions. Related jobs are not converted.
RELATIVE (RELATIVE JOB CONVERSION)
Both the selected job and all the related jobs (the jobs called by JUMP or CALL instructions) are converted.
For details of each conversion mode, refer to chapter 6.3.4.2 “Jobs Targeted for Conversion” at page 6-32.
D. COORDINATES
Selects the conversion coordinates.
Move the cursor to the coordinates name and press [SELECT]. The selection dialog box appears. Select the desired coordinates.
When the user coordinates are selected, the input buffer line appears. Input the desired user coordinate number and press [ENTER].

E. CONV. METHOD
Specifies the conversion methods of related jobs such as a coordinated job with two manipulators or the system with multiple stations.
COMMON (COMMON SHIFT)
All the manipulators (or all the bases, or all the stations) are converted by the same shift value.
EACH (INDIVIDUAL SHIFT)
Each manipulator (or each base, or each station) is converted separately by different shift values.
For details of each conversion method, refer to chapter 6.3.4.3 “Conversion of Coordinated Jobs” at page 6-33.
6.3.4.2 Jobs Targeted for Conversion

There are two ways to specify the job to be converted as described in the following:

- **Independent Job Conversion**
  Only the selected job is converted even if the selected job includes the jobs called by JUMP or CALL instructions. Related jobs are not converted.

- **Related Job Conversion**
  Both the selected job and all the related jobs (the jobs called by JUMP or CALL instructions) are converted.
6.3.4.3 Conversion of Coordinated Jobs

There are two ways to convert a related job such as a coordinated job with two manipulators or the system with multiple stations as described in the following:

- **Common Shift**
  All the manipulators (or all the bases, or all the stations) are converted by the same shift value.

![Coordinated job with R1+R2](image1)

The system with multiple stations

![Multiple stations](image2)
6 Convenient Functions
6.3 Parallel Shift Job Conversion Function

- **Individual Shift**
  Each manipulator (or each base, or each station) is converted separately by different shift values.

  **Coordinated job with R1+R2**

  ![Image of coordinated job with R1+R2]

  **The system with multiple stations**

  ![Image of the system with multiple stations]

- **Variables used in an individual shift**

  **NOTE**
  Be sure to use the variables of which numbers are consecutive after the selected number. The variables of which numbers are not consecutive are unable to be selected.

  Example 1) When selecting P010 for a coordinated job with R1 + R2:
  Use P010 for R1.
Use P011 for R2.

Example 2) When selecting EX005 for multiple jobs with four stations:
Use EX005 for S1.
Use EX006 for S2.
Use EX007 for S3.
Use EX008 for S4.

- Relation between variables and jobs for conversion in an individual shift

- In the case of independent job conversion:
  • Coordinated job with R1 + R2
Different shift values can be set for each manipulator and base.

- Job with R[ ] (+ S[ ])
  Use one variable for a job with one manipulator.

- **In the case of related job conversion:**
  - Different shift values can be set for each manipulator, base, and station.

In a system with R1, R2, and S1 to S12:
6.3.4 Parallel Shift Job Conversion Function

6.3.4.4 Operation Procedure

The following is the operation procedure for the parallel shift job conversion using position variables.

1. Set the parameter.
   - Set the parameter S2C652 (SHIFT VALUE FOR PARALLEL SHIFT JOB CONVERSION) to 1 (Position variable shift value).

2. Set the position variable.
   - Specify a position variable in advance when setting a shift value by position variables.
   - For the setting of position variables, refer to chapter 3.9.4 “User Variables” at page 3-104.

3. Select (JOB) under (Main Menu).

4. Select (JOB).
   - The JOB CONTENT window appears.

5. Select (UTILITY) under the pull-down menu.

6. Select (PARALLEL SHIFT JOB).
   - The PARALLEL SHIFT JOB window appears.

7. Specify the conversion items.
   - Specify each item.

8. Select “EXECUTE”.
   - Select “EXECUTE” then the parallel shift job conversion is executed. The JOB CONTENT window appears when the conversion is completed.
   - When “CANCEL” is selected, the display goes back to the JOB CONTENT window without executing conversion.

**NOTE**

If an alarm occurs during conversion, conversion is suspended.
Specify the position variable in advance when using the setting value as a shift value.

The line to which the Edit Lock function is set or the comment out is performed cannot be changed.
(For details, refer to chapter 3.7.6 “Commenting Out a Line” at page 3-71 and chapter 3.7.7 “Prohibiting Editing Line-by-Line” at page 3-82.)
6 Convenient Functions
6.4 PAM Function

6.4 PAM Function

6.4.1 Function Overview

The function for position adjustment during playback (PAM: Position Adjustment by Manual) allows position adjustment by simple operations while observing the motion of the manipulator and without stopping the manipulator. Positions can be adjusted in both teach mode and play mode.

The following data can be adjusted by key input from the programming pendant.

- Teaching Point (Position)
- Teaching Point (Posture angle)
- Operation Speed
- Position Level

6.4.1.1 Input Ranges for Adjustment Data

The input ranges for adjustment data are indicated in the following table.

<table>
<thead>
<tr>
<th>Data</th>
<th>Input Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Steps for Adjustment</td>
<td>Up to 10 steps can be adjusted at the same time.</td>
</tr>
<tr>
<td>Position Adjustment Range (X, Y, Z)</td>
<td>Unit: mm, valid to two decimal places, maximum ±10 mm</td>
</tr>
<tr>
<td>Posture Angle Adjustment Range (Rx, Ry, Rz)</td>
<td>Unit: deg, valid to two decimal places, maximum ±10 deg</td>
</tr>
<tr>
<td>Speed Adjustment Range (V)</td>
<td>Unit: %, valid to two decimal places, maximum ±50%</td>
</tr>
<tr>
<td>PL Adjustment Range</td>
<td>0 to 8</td>
</tr>
<tr>
<td>Adjustment Coordinates</td>
<td>Robot coordinates, base coordinates, tool coordinates, user coordinates (Default coordinates: robot coordinates)</td>
</tr>
</tbody>
</table>

The input ranges for adjustment data can be changed by the following parameters:

- S3C1098: Position adjustment range (unit: 0.001 mm)
- S3C1099: Speed adjustment range (unit: 0.01%)
- S3C1100: Adjustment coordinate specification
- S3C1102: Posture angle adjustment range (unit: 0.01 deg)

For details, refer to chapter 8 “Parameter” at page 8-1.
• Base axis and station axis data cannot be adjusted.
• Adjustment when a TCP instruction is executed is performed by adjusting the data of the selected tool.
• When the coordinates for adjustment are user coordinates, an error occurs if teaching has not been performed in the user coordinates.
• If an attempt is made to adjust “PL” when there is no “PL” in the step subject to the adjustment, an error occurs.
• Position variable and reference point steps cannot be adjusted. An error occurs if adjustment is attempted.
• An attempt to adjust the speed at the step that has no speed tag causes an error.
6 Convenient Functions

6.4 PAM Function

6.4.2 Operating Methods

6.4.2.1 Setting Adjustment Data

1. Select {JOB} under {Main Menu}.
2. Select {JOB}.
   
   The JOB CONTENT window (in the teach mode) or the PLAYBACK window (in the playback mode) appears.
3. Select {UTILITY} under the pull-down menu.
4. Select {PAM}.
   
   The PAM window appears.

5. Set adjustment data.
   
   A. **Job**
   Set the job name to be adjusted.
   Line up the cursor and press [SELECT] to display the JOB LIST window.
   Move the cursor to the desired job and press [SELECT] to set the adjusted job.

   B. **Status**
   Shows the status of adjustment in the PAM function.
   "NOT DONE" appears when adjustment is not executed. "DONE" appears when the execution of adjustment is completed.

   C. **Input Coord**
   Set the desired coordinates.
   Line up the cursor and press [SELECT] to display the selection dialog box.
   Move the cursor to the desired coordinate system and press [SELECT] to set the input coordinates.

   D. **Step Number**
   Set the step number to be adjusted.
   Line up the cursor and press [SELECT] to display the number input buffer line.
   Input the step number and press [ENTER] to set the value.

   E. **XYZ Coordinate Adjustment**
   Set the direction and amount of the X, Y, and Z coordinates.
   Line up the cursor with the data to be adjusted and press [SELECT]
to display the number input buffer line. Input the number data and press [ENTER] to set the adjusted data.

- **F. Rx, Ry, Rz Coordinate Adjustment**
  Set the direction and amount of the Rx, Ry and Rz posture angles.
  Line up the cursor with the data to be adjusted and press [SELECT] to display the number input buffer line. Input the number data and press [ENTER] to set the adjusted data.

- **G. V Coordinate Adjustment**
  Set the speed.
  Line up the cursor and press [SELECT] to display the number input buffer line. Input the number data and press [ENTER] to set the adjusted data.

- **H. PL**
  The position level of the job to be adjusted for the step set in “4. Step Number” is displayed, and the data can be modified.
  When the position level is not decided, [-] is displayed, and cannot be set.
  To modify the position level, line up the cursor, press [SELECT], input the number value and press [ENTER].

The line to which the Edit Lock function is set or the comment out is performed cannot be changed.

Following errors occur when performing the Edit Lock operation.

1011: EDIT LOCK is set for this line.
1012: This line is defined as a comment.

(For details, refer to chapter 3.7.6 “Commenting Out a Line” at page 3-71 and chapter 3.7.7 “Prohibiting Editing Line-by-Line” at page 3-82.)
6.4.2.2 Executing the Adjustment

- Executing the Adjustment

1. Touch “COMPLETE” on the screen.
   - The confirmation dialog box appears.

2. Select “YES”.
   - In the teach mode, the job adjustment can be immediately executed. In the play mode, the job can be adjusted just before execution (move operation).
   - When the job adjustment is completed, the set data shown in the PAM window is cleared. However, if there is an step which exceeds the software limit or an step in which the interpolation motion is impossible during the job adjustment, an error occurs and only the data of the step cannot be cleared on the window.
Cancelling the Execution

In the play mode, during the adjustment wait status, “STOP” is displayed in the PAM window. To cancel the adjustment process, touch “STOP” on the screen. Also, if the following occurs before executing, the process is automatically cancelled.

- If the mode is changed
- If an alarm occurs
- If the power is turned OFF
6 Convenient Functions
6.4 PAM Function

■ Clearing Data

If there is a mistake made when adjusting the data, or if the adjustment of the step becomes unnecessary, the data can be cleared.

1. Move the cursor to the step of the data to be cleared.

   ![Clearing Data Diagram]

   Steps in which data is to be cleared.

2. Select {EDIT} under the pull-down menu.
3. Select {LINE CLEAR}.
   – The line data is cleared.

■ Copying Data

To input the same data as those set previously, perform the following operation.

1. Move the cursor to the line to be copied.
2. Select {EDIT} under the menu.
   – The pull-down menu appears.

   ![Copying Data Diagram]

3. Select {LINE COPY}.
4. Move the cursor to the line where the item is to be copied.
5. Select {EDIT} under the menu.
6 Convenient Functions
6.4 PAM Function

6. Select (LINE PASTE).
   - The desired data is copied to the line.
   - However, if the line where the data is to be copied does not have a speed value or PL value, it cannot be copied.

■ Canceling the Adjustment

After the position adjustment in the PAM function, the job can be returned to the status before adjustment only during teaching. In this case, follow the procedures below.

Note that the job cannot be undone during playback.

1. Move the cursor to the line to be copied.
   - After the position adjustment, the status shows “DONE”.

2. Select (EDIT) under the menu.
   - The pull-down menu appears.

3. Select (UNDO) under the pull-down menu.
   - The confirmation dialog box appears.

4. Select “YES”
   - The status turns “NOT DONE” and the job is undone when selecting “YES”. The status does not change and the job is not undone when selecting “NO”. 

6.5 Mirror Shift Function

6.5.1 Function Overview

With the mirror shift function, a job is converted to the job in which the path is symmetrical to that of the original job. This conversion can be performed for the specified coordinate among the X-Y, X-Z, or Y-Z coordinate of the robot coordinates and the user coordinates.

The mirror shift function is classified into the following three: the pulse mirror-shift function, the robot-coordinates mirror-shift function, and the user-coordinates mirror-shift function.

![Diagram of original and converted paths before and after mirror shift]
6.5.2 Pulse Mirror-shift Function

With the pulse mirror-shift function, the mirror shift is performed by reversing the sign (+/-) for the axes which are specified with the parameter in advance.

6.5.2.1 Parameter Setting

Using the following parameter, specify the axes for which the sign is to be reversed.

S1CxG065: Mirror Shift Sign Reversing Axis Specification

6.5.2.2 Object Job

Jobs without group axes and relative jobs cannot be converted.

6.5.2.3 Group Axes Specification

When specifying the group axes for the converted job in a multiple group axes system, the group axes specified in the original and converted jobs must be the same.

- Robot Axis: Same model
- Base Axis: Same configuration
- Station Axis: Same configuration

6.5.2.4 Position Variables

Position variables are not converted by the mirror shift function.
6.5.3 Robot-coordinates Mirror-shift Function

With the robot-coordinates mirror-shift function, the mirror shift is performed on the X-Z coordinate of the robot coordinates.

6.5.3.1 Object Job

Jobs without group axes cannot be converted.

6.5.3.2 Group Axes Specification

When specifying the group axes for the converted job in a multiple group axes system, the group axes specified in the original and converted jobs must be the same.

- Robot Axis: Same model
- Base Axis: Same configuration
- Station Axis: Same configuration

6.5.3.3 Position Variables

Position variables are not converted by the mirror shift function.

**NOTE**

- Mirror shift conversion for the base axis is not performed with the robot-coordinates mirror shift function.
- With the robot-coordinates mirror shift function, mirror shift conversion for the station axis is performed by reversing the sign for the axes specified with the parameter S1CxG065 "Mirror Shift Sign Reversing Axis Specification".
6.5.4 User-coordinates Mirror-shift Function

With the user-coordinates mirror-shift function, the mirror shift is performed on the X-Z, X-Y, or Y-Z coordinate of the specified user coordinates.

6.5.4.1 Object Job

Jobs without group axes cannot be converted.

6.5.4.2 Group Axes Specification

When specifying the group axes for the converted job in a multiple group axes system, the group axes specified in the original and converted jobs must be the same.

- Robot Axis: Same model
- Base Axis: Same configuration
- Station Axis: Same configuration

6.5.4.3 Position Variables

Position variables are not converted by the mirror shift function.

**NOTE**

With the user-coordinates mirror shift function, mirror shift conversion for the station axis is performed by reversing the sign for the axes specified with the parameter S1CxG065 "Mirror Shift Sign Reversing Axis Specification".
6.5 Mirror Shift Function

6.5.5 Notes on the Mirror Shift Function

For manipulators, such as a polishing wrist, whose center of S-axis rotation and T-axis rotation are offset in the X-coordinate direction, the mirror shift cannot correctly be performed by the pulse mirror-shift function. Be sure to use the robot-coordinates mirror-shift function or use the user-coordinates mirror-shift function with the user coordinates specified on the center of the T-axis rotation.

(1) Using the Robot-coordinates Mirror-shift Function
When the robot-coordinates mirror-shift function is performed, the mirror shift is performed on the X-Z coordinate of the robot coordinates. The path of the converted job is as follows:

Robot-coordinates Mirror-shift Conversion

After conversion

Before conversion

(2) Using the User-coordinates Mirror-shift Function
To use the user-coordinates mirror-shift function, specify the user coordinates on the center of T-axis rotation in advance.

User-coordinates Mirror-shift Conversion

User coordinates

After conversion

Before conversion

"/OV" is added to the step when its position exceeds the P-point maximum envelope due to the conversion. When "/OV" is added to the step, the position after conversion is taught if the pulse limit is exceeded. If the interpolation motion is impossible, when the position is taught by the pulse value, the pulse value before conversion is taught, and when the position is taught by the XYZ value, the XYZ value after conversion is taught.
6.5.6 Operation Procedures

6.5.6.1 Calling Up the JOB CONTENT Window

Call up the JOB CONTENT window of the job to be converted as follows:

- **For Current Job**
  1. Select {JOB} under {Main Menu}.
  2. Select {JOB}.

- **For Another Job**
  1. Select {JOB} under {Main Menu}.
  2. Select {SELECT JOB}.
    - The JOB LIST window appears.
  3. Select the desired job.

6.5.6.2 Mirror Shift Conversion

1. Display the JOB CONTENT window.
2. Select {UTILITY} under the pull-down menu.
   - The MIRROR SHIFT window appears.
3. Select {MIRROR SHIFT}.
   - The MIRROR SHIFT window appears.
6.5.6.3 Explanation of the Mirror Shift Window

A. SOURCE JOB
Selects the conversion source job. To select another job to be converted, move the cursor to the name and press [SELECT] to call up the list of jobs. Select the desired job and press [SELECT].

B. SOURCE CTRL GROUP
Displays the control group of the conversion source job.

C. STEP SELECTION
Specifies the steps to be converted. From the first step to the last step of the selected job are specified as initial value.

D. DESTINATION JOB
Specifies the converted job name. To enter the name, move the cursor to the name and press [SELECT]. The name of the conversion source job is displayed in the input line as initial value. When "***" is displayed, the name for the converted job is to be the same as that of the conversion source job.

E. DEST CTRL GROUP
Selects the control group for the converted job. When the destination job name is entered, the same control group as the conversion source job is automatically set. To change it, move the cursor to the control group and press [SELECT] to call up the selection dialog box.

F. COORDINATES
Specifies the coordinates used for conversion.
"PULSE": Executes the pulse mirror-shift conversion.
"ROBOT": Executes the mirror-shift conversion on the basis of the cartesian coordinates.
"USER": executes the mirror-shift conversion on the basis of the specified user coordinates.
6 Convenient Functions
6.5 Mirror Shift Function

G. USER COORD NO.
Specifies the user coordinates number when "USER" is selected in "6. COORDINATES".
This item cannot be set when "PULSE" or "ROBOT" is selected in "6. COORDINATES".

H. TARGET
Specifies the coordinate where conversion is to be done when "ROBOT" or "USER" is selected in "6. COORDINATES". "XY", "XZ", or "YZ" can be selected. Always specify "XZ" for "ROBOT".

I. EXECUTE
Mirror shift conversion is executed when pressing "EXECUTE" or [ENTER]. A job is created with the name of conversion source job when a job after conversion is not entered.
6.6 Multi Window Function

6.6.1 Function Overview

Multi window function divides the general-purpose display area up to 4 windows and shows them simultaneously.

There are seven dividing patterns to be optionally choose as necessary.

6.6.2 Setting the Dividing Pattern of the General-Purpose Display Area

The dividing pattern of the general purpose display area can be changed in the window exclusive for setting.

<table>
<thead>
<tr>
<th>Number of the window</th>
<th>Dividing Pattern</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1 window</td>
</tr>
<tr>
<td>2</td>
<td>2 windows</td>
</tr>
<tr>
<td>3</td>
<td>2 windows</td>
</tr>
<tr>
<td>4</td>
<td>3 windows</td>
</tr>
</tbody>
</table>
6 Convenient Functions
6.6 Multi Window Function

Table 6-3: Display the dividing Pattern  (Sheet 2 of 2)

<table>
<thead>
<tr>
<th>Number of the window</th>
<th>Dividing Pattern</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>3 windows</td>
</tr>
<tr>
<td></td>
<td>1 2 3</td>
</tr>
<tr>
<td>6</td>
<td>3 windows</td>
</tr>
<tr>
<td></td>
<td>1 2 3</td>
</tr>
<tr>
<td>7</td>
<td>4 windows</td>
</tr>
<tr>
<td></td>
<td>1 2 3 4</td>
</tr>
</tbody>
</table>

6.6.2.1 Calling Up and Operating Methods of the Display Dividing Pattern Setting Window

Call up the dividing pattern setting window.

1. Select [DISPLAY SETUP] - [CHANGE WINDOW PATTERN] under {Main Menu}.

2. Dividing pattern setting window appears in the center of the display.
6 Convenient Functions
6.6 Multi Window Function

In the dividing pattern setting window, set the dividing pattern of the general-purpose display area.

1. Key operation 1:
   When “Window Pattern” is focused in the window, the option of the dividing pattern shifts as cursor moves upper or lower.
   – Choose the desired dividing pattern from the “Window Pattern”.

2. Key operation 2:
   Press [SELECT] when “Window Pattern” is focused. The list of the dividing patterns appears. The list closes and a pattern is set after choosing the desired pattern and press [SELECT].
3. Touching operation:
   The desired pattern can be chosen by touching a pattern in the window.

   – Choose a pattern from the dividing pattern buttons.

4. Touch [OK] button or move the cursor to it and press [SELECT].
   – The dividing pattern setting window closes and the chosen pattern (chosen with the procedure either 1, 2 or 3) appears.
Cancel the setting

1. Touch [CANCEL] button or move the cursor to it and press [SELECT].
   – Dividing pattern setting window closes. The dividing pattern in the general-purpose display area doesn’t change.

The cursor moves by pressing [AREA] in the dividing pattern setting window.
6.6 Multi Window Function

6.6.3 Displaying the Multi Window

6.6.3.1 Multi Window Mode and Single Window Mode

Specifying more than two-window pattern in the dividing pattern setting window shows plural windows simultaneously in the general-purpose display area.

This is called multi window mode.

On the other hand, a single active window can be displayed with pressing [SHIFT] + [MULTI] operation.

This is called single window mode.

Pressing [SHIFT] + [MULTI] operation switches the display from single window mode to multi window mode. The mode can be changed as necessary.

6.6.3.2 Displaying the Status of Plural (more than two) Window Dividing Pattern Setting

When more than two windows are displayed as a desired pattern, appears on the upper part of the window whereas it doesn't appear when a single window is displayed.
6.6.3.3 Displaying of Active Window and Non-Active Window

When a display is in the multi window mode, one window should be active and the rest is (are) non-active. The title of the active window is displayed in deep blue and non-active window is in light blue.

The active window is the subject of key operation. Also, the menu area or the operational buttons under the general-purpose displaying area are displayed for the operation of the active window.

6.6.3.4 Limited Matters in Multi Window Mode

The content of window when it is in multi window mode can be different from the same window when it is in single window mode because of its limited size. The content becomes normal when the window is displayed in the single window mode.

- The input buffer in the JOB window is displayed only when the window is active.
- No auxiliary window appears.
6.6.4 Operation of Multi Window

6.6.4.1 Switching of Multi Window Mode and Single Window Mode

When more than two windows are displayed as a dividing pattern of the multi window, it is possible to switch multi window mode to single window mode.

1. Set the mode of the general-purpose displaying area to multi window mode.

2. Press [SHIFT]+[MULTI].
   - Active window is displayed under single window mode in the general-purpose window displaying area.
   - The general-purpose display area changes to already set pattern in multi window mode.
6.6.4.2 Switching of Active Window

Switch the active window in the multi window displaying mode.

1. Set the mode of the general-purpose displaying area to multi window mode.

2. Key Operation:
   Press [MULTI].
   - The window to be active shifts. The active window shifts in the order mentioned in chapter 6.6.2 “Setting the Dividing Pattern of the General-Purpose Display Area” at page 6-55. (1→2→3→4→1······)

3. Touching Operation:
   - Touch the window to be active.
   - The touched window becomes active.
6 Convenient Functions
6.6 Multi Window Function

Switch the active window in the single window mode.

1. Set the mode of the general-purpose displaying area to single window mode.

2. Press [MULTI].
   - The following windows are displayed in the order mentioned in chapter 6.6.2 “Setting the Dividing Pattern of the General-Purpose Display Area” at page 6-55. (1→2→3→4→1······)

   ![Diagram of window switching](image)

**NOTE**

During the period before menu is selected when alarm occurred, the active window cannot be switched if alarm window is displayed, direct open is ON or a window is displayed by key allocation operation.
6.6 Multi Window Function

6.6.5 Switching the Axis Operation Control Group

The appropriate control group for axis operation is automatically selected in accordance with the window status or its operation in the active window. Due to this function, when the general-purpose display area is in multi window mode, the control group for axis operation can vary depending on the window which is active at the time.

To avoid unexpected control group to function and for the better safeness, the change of the control group with the [MULTI] operation or touching operation when switching the active window is notified to the user.

The change of the control group for axis operation due to other than [MULTI] operation or touching operation; due to the switch of the window by selecting main menu, is not notified to the user.

6.6.5.1 S2C540 “Choosing Method of Notifying the Change of Axis Operation Control Group when Switching the Active Window”

The method to notify the change of control group for axis operation due to the switch of active window can be changed with parameter.

- Setting Value: 0
  - Keep displaying the message in the human interface display area for three seconds.
  - Message “Control group switched by switching the active window” is displayed.

![Diagram of control panel](image-url)
6 Convenient Functions
6.6 Multi Window Function

• Setting Value: 1
  – Call up the confirmation dialog box to confirm the switch of the active window.
  – Message “Control group will be changed. Switch the active window?” is displayed
  – “Yes” ······ After switching the window to be active, a message appears in the human interface display area.
  – “No” ······ Cancel the window to be active.

  ![Multi Window Function Diagram]

• Setting Value: 2
  – Do not notify the control group change.
6.7 Simple Menu Function

6.7.1 Simple Menu

This function enables users to create "USER DEFINITION" menu by registering the layouts (screen dividing patterns and screen to be displayed) on the general-purpose display area.

Eight layout patterns can be registered to the user definition menu at maximum. The registered layout patterns can be easily called up with the buttons of simple menu.

---

1 Simple menu function is available in DS1.50-00 version or later.
6.7.2 Registering the Layout Patterns to User Definition Menu

6.7.2.1 Register with {REGIST} Button

Register the layout patterns by using {RESIST} button which is in “USER DEFINITION” menu.

1. Press [SIMPLE MENU] or select {Simple Menu} button on the display while the layout pattern to be registered is on the general-purpose display area.

   - “USER DEFINITION” menu appears.

2. Press {REGIST} button.

   - “USER DEFINITION” menu closes.

   - The message “Do you register a current layout?” appears in the confirmation dialog box.

3. Select “YES”.

   - The layout is registered and the dialog box closes.

*It will not be registered when “NO” is selected.
6.7.2.2 Register by Key Operation

Use the programming pendant keys to register the layout patterns to “USER DEFINITION” menu.

1. Press [SHIFT] + [SIMPLE MENU] while the layout pattern to be registered is on the general-purpose display area.
   - The message “Do you register a current layout?” appears in the confirmation dialog box.
   2. Select “YES”.
      - The layout is registered and the dialog box closes.

*It will not be registered when “NO” is selected.
### 6.7.2.3 Conditions to Register the Layout

There are some cases that the layout patterns cannot be registered to "USER DEFINITION" menu.

Followings are the conditions and the messages that the layout is refused to register.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>This layout is already registered.</td>
</tr>
<tr>
<td>2</td>
<td>There is not an undefined domain.</td>
</tr>
<tr>
<td>3</td>
<td>The screen which I cannot register is included [W1W2W3W4] (The number W1 to W4 indicates the windows which are actually displayed on the general-purpose display area, however, the highlighted numbered window cannot be registered. For the layout of 1 to 4, refer to table 6-3 &quot;Display the dividing Pattern&quot; at page 6-55.)</td>
</tr>
<tr>
<td>4</td>
<td>Cannot register at current operation mode.</td>
</tr>
</tbody>
</table>

The screens which cannot be started up in the {Main Menu} are impossible to register.

Also, the layout of the screens that are called up from {EXTERNAL MEMORY DEVICE} or ladder editor (optional function) cannot be registered.

### 6.7.2.4 The Displayed Layout Name

After a layout pattern is registered to "USER DEFINITION" menu, it is named in accordance with the status of the general-purpose display area when the layout pattern is created.

Refer to the followings for the details.

<table>
<thead>
<tr>
<th>Status of general-purpose display area</th>
<th>Name registered to “USER DEFINITION” Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Single window mode</td>
<td>(Same as the sub menu in main menu)</td>
</tr>
<tr>
<td>2 Multi window mode</td>
<td>Layout -n (&quot;n&quot; should be a number from 0 to 7)</td>
</tr>
</tbody>
</table>

It is possible to change the name even after the name is registered. Refer to chapter 6.7.4.3 “Change the Name of Registered Layout Name” at page 6-76.
6 Convenient Functions
6.7 Simple Menu Function

6.7.3 Calling Up of the Registered Layout

6.7.3.1 Calling up

Call up the registered layout with the following procedures.

1. Press [SIMPLE MENU] or select {Simple Menu} button at the lower-left on the display.
   - “USER DEFINITION” menu appears.

2. Select and press a button on “USER DEFINITION” menu to display a layout to be called up.
   - “USER DEFINITION” menu closes.
   - The selected layout appears on the general-purpose display area.
### 6.7.3.2 Conditions when Calling Up the Layout

There are some cases where the layout cannot be called up depending on the conditions when calling up. Followings are the conditions and the messages that the layout is refused to be called up.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>When all the registered layout windows cannot be displayed due to security mode or its purpose of use. There are no windows to display within the chosen layout.</td>
</tr>
</tbody>
</table>

When undisplayed screen is included in the layout to be called up due to above mentioned reasons, the message, "Please select a Main Menu" appears to the said screen.
6 Convenient Functions
6.7 Simple Menu Function

6.7.4 Editing “USER DEFINITION” Menu

Editing procedures of “changing the registered name” and “deleting the registered item” are possible to the items registered to “USER DEFINITION MENU” window.

Those edition are executed on “USER DEFINITION MENU” window. Displaying of “USER DEFINITION MENU” window is possible in the operation mode or more and editing of this menu is possible in the editing mode or more.

6.7.4.1 Displaying “USER DEFINITION” Window

Displays “USER DEFINITION MENU” Window with (EDIT) button.

1. Press [SIMPLE MENU] or select (Simple Menu) button at the lower-left on the display.
   - “USER DEFINITION MENU” menu appears.

2. Press (EDIT) button.
   - “USER DEFINITION” menu closes.
   - “USER DEFINITION MENU” window appears on the active window in the general-purpose display area.
6.7.4.2 Displaying “USER DEFINITION MENU” window Under Main Menu

Displays “USER DEFINITION MENU” window under main menu.

1. Select {SYSTEM INFO} under {Main Menu}.
   - {SYSTEM INFO} sub menu appears.

2. Select {USER DEFINITION}.
   - “USER DEFINITION MENU” window appears on the active window in the general-purpose display area.
6.7.4.3 Change the Name of Registered Layout Name

The registered layout names can be changed.

1. Display "USER DEFINITION MENU" window.

2. Move the cursor to the layout name to be changed and press [SELECT].
   - The software key pad for inputting letters appears.
6 Convenient Functions
6.7 Simple Menu Function

3. Input the layout name, then press [ENTER] or {ENTER} button.
   – The software key pad closes.
   – The name changes.

* If complete the software key pad operation with [CANCEL] or {CANCEL} button, the name editing operation is also canceled.

When the bilingual function is valid, name in each language can be set.
6.7.4.4 Deleting the Layout

The layout registered to “USER DEFINITION” menu can be deleted.

1. Display “USER DEFINITION MENU” window.

2. Move the cursor to the layout to be deleted and press [SHIFT] + [SELECT]. (multiple selection possible)
   – “●” mark is indicated at the head of the selected line.

3. Select {DATA} in the menu.
   – A pull down menu appears.
6 Convenient Functions
6.7 Simple Menu Function

4. Select (DELETE MENU).
   – The confirmation dialog box with a message “Delete? Layout -4 (layout name)” appears to the line marked with ●.

5. Select “YES” in the dialog box.
   – The marked layout is deleted.

* The layout will not be deleted if “NO” in the dialog box is selected.
6.7.4.5 Delete All Layout

All layouts registered to "USER DEFINITION" menu can be deleted at a time.

1. Display "USER DEFINITION MENU" window.
2. Select {EDIT} in the menu.
   - A pull down menu appears.
3. Select {SELECT ALL}.
   - "●" mark is indicated at the head of all the registered layouts.
4. Select (DATA) in the menu.
   – A pull down menu appears.

5. Select (DELETE MENU).
   – The confirmation dialog box with a message “Delete? Layout -0 
     (layout name)” appears to the lines marked with “●”.

6. Select “YES” in the dialog box.
   – The marked layouts are deleted.
   * The layout will not be deleted if “NO” in the dialog box is selected.

Additional Information:
- Move the cursor to the line with “●” mark, and press [SHIFT] + 
  [SELECT] to disappear “●” mark.
- When select [EDIT] → [CANCEL SELECT] under the pull down 
  menu to cancel select and “●” marks disappear.
6.7.5 Save/Load (to external memory devices) the User Definition Menu Data

The data registered to “USER DEFINITION” menu (user menu data) can be saved to and loaded from the external memory device.

In this case, the name of the file is “USERMENU.DAT”.

6.7.5.1 Saving the Data

User menu data can be saved at the security level of operation mode or more.

1. Select {EX. MOMORY} under {Main Menu}.
   - {EX. MOMORY} sub menu appears.

2. Select {SAVE}.
   - {SAVE} window of external memory device appears.

3. Select {FILE/GENERAL DATA}.
   - {FILE/GENERAL DATA} window of external memory device appears.
4. Select {USER MENU DATA}.
   – "★" mark is indicated at the head of {USER MENU DATA}.

5. Press [ENTER].
   – The confirmation dialog box with a message "SAVE" appears.

6. Select "YES" in the dialog box.
   – {USER MENU DATA} is saved.
   * It will not be saved if "NO" in the dialog box is selected.
6.7.5.2 Loading the Data

User menu data can be loaded at the security level of editing mode or more.

1. Select {EX. MEMORY} under {Main Menu}.
   - {EX. MEMORY} sub menu appears.

2. Select {LOAD}.
   - {LOAD} window of external memory device appears.

3. Select {FILE/GENERAL DATA}.
   - {FILE/GENERAL DATA} window of external memory device appears.
4. Select {USER MENU DATA}.
   
   – "★" mark is indicated at the head of {USER MENU DATA}.

   ![Image]

5. Press [ENTER].
   
   – The confirmation dialog box with a message "LOAD?" appears.

   ![Image]

6. Select "YES" in the dialog box.
   
   – {USER MENU DATA} is loaded.

   * It will not be loaded if "NO" in the dialog box is selected.
6 Convenient Functions
6.8 Parameter Setting Function

6.8 Parameter Setting Function

6.8.1 Parameter Setting Function

Among the parameters explained in chapter 8 “Parameter” at page 8-1, frequently used parameters’ settings can be changed from the exclusive windows. Those windows are sorted out depending on the parameters’ function as shown below.

- **TEACHING CONDITION SETTING**
  Teaching-relevant parameters are displayed.

- **OPERATE CONDITION SETTING**
  Mode switching/power-relevant parameters are displayed.

- **OPERATE ENABLE SETTING**
  ON/OFF of the manipulator-relevant parameters are displayed.

- **FUNCTION ENABLE SETTING**
  Enable/unable of optional function-relevant parameters settings are displayed.

- **JOG CONDITION SETTING**
  Operation of the jog-relevant parameters are displayed.

- **PLAYBACK CONDITION SETTING**
  Playback operation-relevant parameters are displayed.

- **FUNCTIONAL CONDITION SETTING**
  Execution of each function-relevant parameters are displayed.

Select above mentioned menu from {SETUP} window under main menu.
Move the cursor to select a menu, then the settings of the desired parameters can be changed by one of the following three methods according to its content.

- When there are two options.
  The options alternate every time [SELECT] is pressed.

- When there are three or more options.
  A dialog box with the options appears. Select one to change the settings.

- When it requires to input a value.
  Input a value using [Numeric Key]s and press [ENTER] to change the settings.
6 Convenient Functions
6.8 Parameter Setting Function

6.8.2 Teaching Condition Setting

Select {SETUP} → {TEACHING CONDITION SETTING} to display the following window.

- LANGUAGE LEVEL (S2C211)
  Refer to chapter 8.3.0.13 “S2C211: LANGUAGE LEVEL” at page 8-15.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUBSET</td>
<td>0</td>
</tr>
<tr>
<td>STANDARD</td>
<td>1</td>
</tr>
<tr>
<td>EXPANDED</td>
<td>2</td>
</tr>
</tbody>
</table>

- INSTRUCTION INPUT LEARNING (S2C214)
  Refer to chapter 8.3.0.14 “S2C214: INSTRUCTION INPUT LEARNING FUNCTION” at page 8-15.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>VALID</td>
<td>0</td>
</tr>
<tr>
<td>INVALID</td>
<td>1</td>
</tr>
</tbody>
</table>

- MOVE INSTRUCTION SET POSITION (S2C206)
  Refer to chapter 8.3.0.8 “S2C206: ADDITIONAL STEP POSITION” at page 8-13.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>STEP</td>
<td>0</td>
</tr>
<tr>
<td>LINE</td>
<td>1</td>
</tr>
</tbody>
</table>
6 Convenient Functions
6.8 Parameter Setting Function

• BUZZER WHEN POSITION TEACHING (S2C433)
  Refer to chapter 8.3.0.43 “S2C433: POSITION TEACHING BUZZER” at page 8-27.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONSIDER</td>
<td>0</td>
</tr>
<tr>
<td>NOT CONSIDER</td>
<td>1</td>
</tr>
</tbody>
</table>

• STEP ONLY CHANGING (S2C203)
  Refer to chapter 8.3.0.6 “S2C203: CHANGING STEP ONLY” at page 8-13.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERMIT</td>
<td>0</td>
</tr>
<tr>
<td>PROHIBIT</td>
<td>1</td>
</tr>
</tbody>
</table>

• RECT/CYL INDRICAL (S2C196)
  Refer to chapter 8.3.0.2 “S2C196: SELECTION OF CARTESIAN/CYLINDRICAL” at page 8-12.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CYL.</td>
<td>0</td>
</tr>
<tr>
<td>RECT</td>
<td>1</td>
</tr>
</tbody>
</table>

• TOOL NO. SWITCH (S2C431)
  Refer to chapter 8.3.0.42 “S2C431: TOOL NO. SWITCHING” at page 8-27.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROHIBIT</td>
<td>0</td>
</tr>
<tr>
<td>PERMIT</td>
<td>1</td>
</tr>
</tbody>
</table>

• TOOL NO. INTERLOCK FOR STEP ENTRY(S2C234)
  Refer to chapter 8.3.0.29 “S2C234: STEP REGISTRATION AT TOOL NO. CHANGE” at page 8-19.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERMIT</td>
<td>0</td>
</tr>
<tr>
<td>PROHIBIT</td>
<td>1</td>
</tr>
</tbody>
</table>

• POS. TEACH ONLY JOG CONTROL GROUP (S2C320)
  Refer to chapter 8.2.0.15 “S2C320: CONTROLLED GROUP JOB TEACHING POSITION CHANGE” at page 8-7.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Parameter Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROHIBIT</td>
<td>0</td>

</tbody>
</table>

• POSITION ADJUST RANGE (PAM) (S2C1098)

• SPEED ADJUST RANGE (PAM) (S2C1099)

• POSTURE ANGLE ADJUST RANGE (PAM) (S2C1102)
  Refer to chapter 8.2.0.24 “S3C1098 to S3C1102: POSITION CORRECTING FUNCTION DURING PLAYBACK” at page 8-11.
6.9 Jog Key Allocation

6.9.1 Jog Key Allocation Function

This function enables to operate external axis without switching control groups by using operation keys of 7th-axis (E+, E-) and 8th-axis (8+, 8-) on the programming pendant after setting any external axis to them.

CAUTION

- Operation of external axis by using the allocated operation keys of 7th-axis and 8th-axis are valid only when operating a robot. In the case where operating external axes, operate them by using keys from the key for 1st-axis. Furthermore, when the robot is equipped with 7th and 8th axes, keys on the pendant are used to operate existing axes on a priority basis. For example, when the robot is equipped with 7 axes, E-axis will move even if the external axis operation is allocated to 7th-axis (E+, E-) operational key.

NOTE

This function can operate other control group than displayed in the upper part of the programming pendant (Status display area or the LED of [ROBOT] or [EX.AXIS]). Also, the simultaneous operation of the robot and the external axes is possible by pressing several axis operational keys at a time. Please be careful to the axes movements when pressing them.
6.9 Jog Key Allocation

6.9.2 Jog Key Allocation Setting

6.9.2.1 Allocation of the Jog Key

CAUTION

- Allocation of the jog keys is valid only in the management mode while only confirmation of allocated axes is valid in the operation mode and edit mode.

NOTE

The setup conditions are saved in the following parameters. Even if the same numbered external axes are allocated to a key (example: S1 for the 1st-axis), the value of the parameter to be saved varies depending on the composition of the control group of the system. In this consequence, when loading the parameter file (ALL.PRM or AC.PRM), please make sure to confirm the allocating status before executing the function.

Parameters for saving the setup conditions of jog key allocation.

S2C739  7th-axis
S2C740  8th-axis

1. Select (SETUP) under main menu.
2. Select (JOG KEY ALLOCATION).
   - Jog key allocation window appears.
6 Convenient Functions
6.9 Jog Key Allocation

3. Move the cursor to “GROUP” and press down [SELECT].
   – The list of allocatable external axes appears.

4. Select an external axis to be allocated.
   – The selected external axis is indicated in “GROUP” and “1” is indicated in “AXIS NO”.

5. (In the cases where the external axis is composed of more than two axes and the axis from the 2nd-axis are operated)
   Move the cursor to “AXIS NO”. and press down [SELECT].
   – The list of selected external axes appears.

6. Select a desired axis number.
   – The selected axis is indicated in “AXIS NO”.

6-104
6.9.2.2 Cancellation of Jog Key Allocation

1. Select {SETUP} under main menu.
2. Select {JOG KEY ALLOCATION}.
   – Jog key allocation window appears.
3. Move the cursor to “GROUP” and press [SELECT].
   – The list of allocatable external axes appears.

<table>
<thead>
<tr>
<th>JOG KEY ALLOCATION</th>
<th>GROUP</th>
<th>AXIS NO.</th>
</tr>
</thead>
<tbody>
<tr>
<td>7TH(-, E+)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8TH(0-, 0+)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4. Select “NONE”.
   – “******” is indicated in “GROUP” and “AXIS NO.”

<table>
<thead>
<tr>
<th>JOG KEY ALLOCATION</th>
<th>GROUP</th>
<th>AXIS NO.</th>
</tr>
</thead>
<tbody>
<tr>
<td>7TH(-, E+)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>8TH(0-, 0+)</td>
<td>группы</td>
<td>2</td>
</tr>
</tbody>
</table>
6.9.2.3 Operating Method of Allocated External Axis

CAUTION

- When the same external axis (same group and axis number) is allocated to 7th- and 8th-[Axis Key]s, it won't move even both keys are pressed individually. In the case like this, the message “Check the setting of JOG KEY ALLOCATION(7th and 8th)” is indicated to alarm that the same external axis is allocated to two different keys. Please cancel the allocation setting or allocate another external axis to either of the key.

1. Press [ROBOT].
   - A mark of robot is indicated at the left side of the status area on the programming pendant, and this expresses that the robot is selected to be the object of operation.
   - Also, the LED of [ROBOT] lights.

2. Press 7th(E+,E-)-axis or 8th(8+,8-)-axis operation key.
   - The allocated external axes moves if there are no 7th- and 8th-axes and the allocation setting was done properly.
6.10 Energy-Saving Function

6.10.1 Energy-Saving Function

Energy-saving function is a function to save power by halting the power to the robot after applying brake to the motor when robot's all axes won’t move for a designated period of time while servo is turned ON in play mode. The initial designated period of time is 10 minutes.

This energy-saving function is valid when all the following condition met.
1. Energy-saving function is valid.
2. The system input signal (signal to prohibit on energy-saving mode #40580) is turned OFF.

Followings are the status of the robot while this function is valid.
1. The message “On energy saving mode” is indicated on the programming pendant.
2. The servo is turned ON.
3. The jobs under execution are continuously executed.
4. The system output signal (ENERGY-SAVING:SOUT#0576(#85727)) to indicate that it is in energy-saving status is turned ON while other signals won’t change.

CAUTION

This function is cancelled in the following cases.
– When the programming pendant mode is switched to teach mode.
– When the system input signal of external servo OFF(1,2,3) is input.
– When the axis, which belongs to the subject control group of the executing job, is about to move while energy-saving function is valid.
• In the cases where emergency stop or servo OFF is executed when alarming.

NOTE

This function will not be cancelled if the system input signal (signal to prohibit energy-saving #40580) is turned ON. This signal merely prohibits to shift the status to energy-saving status.
6.10.2 Energy-Saving Setting Method

6.10.2.1 Valid/Invalid of Energy-Saving Setting

**CAUTION**

- Valid/invalid of the energy-saving function is available only in the management mode while only confirmation of this function is available in the operation mode and edit mode.

1. Select `{SETUP}` under main menu.
2. Select `{ENERGY SAVING FUNCTION}`.

   - Energy-saving function window appears.
3. Move the cursor to “ENERGY SAVING FUNCTION” and press [SELECT].
   - Valid and invalid alternates at each press of [SELECT].
6 Convenient Functions
6.10 Energy-Saving Function

4. Move the cursor to {SETTING TIME} and press [SELECT].
   - Input the time you want to start energy-saving after the robot is
     stopped into {SETTING TIME} section (unit: min.). The initial value
     is set to 10 min. and the range of the inputting value is from 1 to 60.

6.10.2.2 Accumulated Energy-Saving Time Clearance

1. Select {SETUP} under main menu.
2. Select {ENERGY SAVING FUNCTION}.
   - Energy-saving function window appears.
3. Move the cursor to {ACCUMULTED ENERGY-SAVING TIME}.
4. Move the cursor to {DATA} and press [SELECT].
   - "CLEAR ACCUMULTED" appears in the pull-down menu.
6 Convenient Functions
6.10 Energy-Saving Function

5. Select (CLEAR ACCUMULATED)
   – The confirmation dialog box appears.

6. Select “YES” on the dialog box,
   – The accumulated energy-saving time is cleared.
6 Convenient Functions
6.10 Energy-Saving Function

6.10.3 Energy-Saving Status Confirmation Method

6.10.3.1 Confirmation by the accumulated energy-saving time
1. Select {SETUP} under main menu.
2. Select {ENERGY SAVING FUNCTION}.
   - Energy-saving function window appears.
   - The accumulated energy-saving time is being counted up while the status is in the energy-saving mode.

6.10.3.2 Confirmation by System Signal Output
1. Select {IN/OUT} under main menu.
2. Select {SPECIFIC OUTPUT}.
   - The specific output window appears.
3. Press the [PAGE] or [SELECT] to display SOUT#0576 (#50727).
   - The system output status during the energy-saving status is indicated.
   - This signal is turned ON while in the energy-saving mode.
   - This signal is turned OFF after the energy-saving mode is released.
6.11 Instruction Displaying Color Setting Function

6.11.1 Setting the Instruction Displaying Color on the Job Window

With this function, each instruction can be displayed on a color to color basis on the job window. Respective colors are specified on the following instruction basis.

- Move instruction
- DEVICE instruction
- Comment instruction
- Label instruction
- Macro instruction (when the macro function is effective)
- I/O instruction
- Instructions to which LINE EDIT LOCK is specified.
- Instructions to which LINE COMMENT is specified.
- All the instructions other than listed above

The color of each instruction in the job window can be set on the DISPLAY COLOR CONDITION SETTING window.

1. Select {SETUP} under {Main Menu}.

![Display Color Setting Window](image)
2. Select (DISPLAY COLOR CONDITION SETTING).
   – The display color condition setting window appears.

   ![Display Color Condition Setting Window]

3. Move the cursor to the instruction to be changed and press [SELECT].
   – The list of the candidate colors for the instruction is displayed.

   ![Candidate Colors List]

6 Convenient Functions
6.11 Instruction Displaying Color Setting Function

4. Select a color.
   - The color of each instruction is fixed.

5. Select JOB window.
   - Each instruction is displayed in the selected colors on the job window.
6 Convenient Functions
6.12 Present Manipulator Position Output Function

6.12 Present Manipulator Position Output Function

6.12.1 Outline

Output the present manipulator's cartesian position (base coordinate) to the specified register.

6.12.2 Parameters

The following parameters specify the function and output register number.

<table>
<thead>
<tr>
<th>S1CxG</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>208</td>
<td>Specify a function which outputs a specified value of the present cartesian position (base coordinate) to the register 0: invalid 1: Valid</td>
</tr>
<tr>
<td>209</td>
<td>Specify the output size to the register 0: 2 bytes output 1: 4 bytes output</td>
</tr>
<tr>
<td>210</td>
<td>Cartesian position (command value) X register number of output destination</td>
</tr>
<tr>
<td>211</td>
<td>Cartesian position (command value) Y register number of output destination</td>
</tr>
<tr>
<td>212</td>
<td>Cartesian position (command value) Z register number of output destination</td>
</tr>
<tr>
<td>213</td>
<td>Cartesian position (command value) Rx register number of output destination</td>
</tr>
<tr>
<td>214</td>
<td>Cartesian position (command value) Ry register number of output destination</td>
</tr>
<tr>
<td>215</td>
<td>Cartesian position (command value) Rz register number of output destination</td>
</tr>
<tr>
<td>216</td>
<td>Cartesian position (command value) Re register number of output destination</td>
</tr>
<tr>
<td>217</td>
<td>Specify a function which outputs a FB value of the present cartesian position (base coordinate) to the register 0: invalid 1: Valid</td>
</tr>
<tr>
<td>218</td>
<td>Specify the output size to the register 0: 2 bytes output 1: 4 bytes output</td>
</tr>
<tr>
<td>219</td>
<td>Cartesian position (FB value) X register number of output destination</td>
</tr>
<tr>
<td>220</td>
<td>Cartesian position (FB value) Y register number of output destination</td>
</tr>
<tr>
<td>221</td>
<td>Cartesian position (FB value) Z register number of output destination</td>
</tr>
<tr>
<td>222</td>
<td>Cartesian position (FB value) Rx register number of output destination</td>
</tr>
<tr>
<td>223</td>
<td>Cartesian position (FB value) Ry register number of output destination</td>
</tr>
<tr>
<td>224</td>
<td>Cartesian position (FB value) Rz register number of output destination</td>
</tr>
<tr>
<td>224</td>
<td>Cartesian position (FB value) Re register number of output destination</td>
</tr>
</tbody>
</table>
6 Convenient Functions
6.12 Present Manipulator Position Output Function

(Example 1)

<table>
<thead>
<tr>
<th>S1C1G</th>
<th>Setting value</th>
</tr>
</thead>
<tbody>
<tr>
<td>208</td>
<td>1</td>
</tr>
<tr>
<td>209</td>

<tr>
<td>215</td>
<td>15</td>
</tr>
<tr>
<td>216</td>
<td>16</td>
</tr>
</tbody>
</table>

When setting the parameter as above, the manipulator’s present cartesian position is output to the registers as follows.

M010 = Manipulator’s present cartesian position (command value) X [unit: mm]
M011 = Manipulator’s present cartesian position (command value) Y [unit: mm]
M012 = Manipulator’s present cartesian position (command value) Z [unit: mm]
M013 = Manipulator’s present cartesian position (command value) Rx [unit: deg]
M014 = Manipulator’s present cartesian position (command value) Ry [unit: deg]
M015 = Manipulator’s present cartesian position (command value) Rz [unit: deg]
M016 = Manipulator’s present cartesian position (command value) Re [unit: deg]
6 Convenient Functions
6.12 Present Manipulator Position Output Function

(Example 2)

<table>
<thead>
<tr>
<th>S1C1G</th>
<th>Setting value</th>
</tr>
</thead>
<tbody>
<tr>
<td>217</td>
<td>1</td>
</tr>
<tr>
<td>218</td>
<td>1</td>

</tr>
<tr>
<td>224</td>
<td>20</td>
</tr>
<tr>
<td>225</td>
<td>22</td>
</tr>
</tbody>
</table>

When setting the parameter as above, the manipulator’s present cartesian position is output to the registers as follows:

M010= Lower 2 bytes of the manipulator’s present cartesian position (FB value) X [unit: µmm]
M011= Upper 2 bytes of the manipulator’s present cartesian position (FB value) X [unit: µmm]
M012= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Y [unit: µmm]
M013= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Y [unit: µmm]
M014= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Z [unit: µmm]
M015= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Z [unit: µmm]
M016= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Rx [unit: 0.001deg]
M017= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Rx [unit: 0.001deg]
M018= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Ry [unit: 0.001deg]
M019= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Ry [unit: 0.001deg]
M020= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Rz [unit: 0.001deg]
M021= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Rz [unit: 0.001deg]
M022= Lower 2 bytes of the manipulator’s present cartesian position (FB value) Re [unit: 0.001deg]
M023= Upper 2 bytes of the manipulator’s present cartesian position (FB value) Re [unit: 0.001deg]
6 Convenient Functions
6.12 Present Manipulator Position Output Function

- When validating the command value register output function (S1CxG208=1), never fail to set the output register number (S1CxG210 to 216) of each coordinate value.

- When validating the FB value register output function (S1CxG217=1), never fail to set the output register number (S1CxG219 to 225) of each coordinate value.

- In case 2 bytes is set as the register output size (S1CxG209=1 or S1CxG218=1), the unit of X,Y and Z-axes coordinate value becomes “mm” and that of Rx, Ry, Rz and Re coordinate value becomes “deg”. In both cases, only the lower 2 bytes are output.

- When setting 4 bytes to the register output size (S1CxG209=1 or S1CxG218=1), the unit of X,Y and Z-axes coordinate value becomes “µmm” and that of Rx, Ry, Rz and Re coordinate value becomes “0.0001deg”.

- When setting 4 bytes to the register output size (S1CxG209=1 or S1CxG218=1), upper byte of the coordinate value is output to the following register number to the specified output register number. In this consequence, confirm the register’s status of use before setting the output size to the register.
### 6.12.3 Function for Outputting Present Pulse Position to Register

#### 6.12.3.1 Outline

The present position of the robot axis, the base axis, or the station axis in pulses is output to the specified registers.

#### 6.12.3.2 Parameters

The following parameters specify the details of the function and output register numbers.

<table>
<thead>
<tr>
<th>S1CxG</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>202</td>
<td>Specifies the axis to apply the function 1 for outputting the present position in pulses to registers. (command value) The axis is specified in bits. Bit OFF: disable Bit ON: enable</td>
</tr>
<tr>
<td>203</td>
<td>Specifies the axis to apply the function 1 for outputting the present position in pulses to registers. (FB value) The axis is specified in bits. Bit OFF: disable Bit ON: enable</td>
</tr>
<tr>
<td>204</td>
<td>Specifies the output size to the register. Bit OFF: output in 2 bytes Bit ON: output in 4 bytes</td>
</tr>
<tr>
<td>205</td>
<td>Specifies the axis to apply the function 2 for outputting the present position in pulses to registers. (command value) The axis is specified in bits. Bit OFF: disable Bit ON: enable</td>
</tr>
<tr>
<td>206</td>
<td>Specifies the axis to apply the function 2 for outputting the present position in pulses to registers. (FB value) The axis is specified in bits. Bit OFF: disable Bit ON: enable</td>
</tr>
<tr>
<td>207</td>
<td>Specifies the output size to the register. Bit OFF: output in 2 bytes Bit ON: output in 4 bytes</td>
</tr>
<tr>
<td>632 to 639</td>
<td>Function 1 register number of output destination</td>
</tr>
<tr>
<td>640 to 647</td>
<td>Function 1 resolution setting</td>
</tr>
<tr>
<td>648 to 655</td>
<td>Function 1 offset value setting</td>
</tr>
<tr>
<td>656 to 663</td>
<td>Function 2 register number of output destination</td>
</tr>
<tr>
<td>664 to 671</td>
<td>Function 2 resolution setting</td>
</tr>
<tr>
<td>672 to 679</td>
<td>Function 2 offset value setting</td>
</tr>
</tbody>
</table>
6 Convenient Functions
6.12 Present Manipulator Position Output Function

2-byte output specification:
• \( \text{specified M register} = \frac{\text{pulse (command or FB)}}{\text{resolution}} + \text{offset value} \) [unit: pulse]

When the output size to the register is set to 2 bytes (no axis specified in S1CxG204 or S1CxG207), the pulse value in the size of 2 bytes will be output to the specified register number. If the size exceeds 2 bytes, only the lower 2 bytes will be output.

4-byte output specification:
• \( \text{specified M register} = \text{Lower 2 bytes of } \frac{\text{pulse (command or FB)}}{\text{resolution}} + \text{offset value} \) [unit: pulse]
• \( \text{specified M register + 1} = \text{Upper 2 bytes of } \frac{\text{pulse (command or FB)}}{\text{resolution}} + \text{offset value} \) [unit: pulse]

When the output size to the register is set to 4 bytes (an axis specified in S1CxG204 or S1CxG207), the lower 2 bytes will be output to the specified register number, and the upper 2 bytes will be output to the next number of the specified register number. Before performing setting, check the usage status of the registers.

<Example 1>

<table>
<thead>
<tr>
<th>S1C1G</th>
<th>Setting value</th>
</tr>
</thead>
<tbody>
<tr>
<td>202</td>
<td>63</td>
</tr>
<tr>
<td>203</td>
<td>0</td>
</tr>
<tr>
<td>204</td>
<td>0</td>
</tr>
<tr>
<td>632</td>
<td>10</td>
</tr>
<tr>
<td>633</td>
<td>11</td>
</tr>
<tr>
<td>634</td>
<td>12</td>
</tr>
<tr>
<td>635</td>
<td>13</td>
</tr>
<tr>
<td>636</td>
<td>14</td>
</tr>
<tr>
<td>637</td>
<td>15</td>
</tr>
</tbody>
</table>

When the parameters are set as shown in the above table, the present position is output to the registers as follows:

\[
\begin{align*}
M010 &= \text{Present pulse position (command value) S (1st axis) [unit: pulse]} \\
M011 &= \text{Present pulse position (command value) L (2nd axis) [unit: pulse]} \\
M012 &= \text{Present pulse position (command value) U (3rd axis) [unit: pulse]} \\
M013 &= \text{Present pulse position (command value) R (4th axis) [unit: pulse]} \\
M014 &= \text{Present pulse position (command value) B (5th axis) [unit: pulse]} \\
M015 &= \text{Present pulse position (command value) T (6th axis) [unit: pulse]}
\end{align*}
\]
6 Convenient Functions
6.12 Present Manipulator Position Output Function

<Example 2>

<table>
<thead>
<tr>
<th>Setting value</th>
</tr>
</thead>
<tbody>
<tr>
<td>202</td>
</tr>
<tr>
<td>203</td>
</tr>
<tr>
<td>204</td>
</tr>
<tr>
<td>632</td>
</tr>
<tr>
<td>633</td>
</tr>
<tr>
<td>634</td>
</tr>
<tr>
<td>635</td>
</tr>
<tr>
<td>636</td>
</tr>
<tr>
<td>637</td>
</tr>
</tbody>
</table>

When the parameters are set as shown in the above table, the present position is output to the registers as follows:

- **M010** = Lower 2 bytes of the Present pulse position (FB value) S (1st axis) [unit: pulse]
- **M011** = Upper 2 bytes of the Present pulse position (FB value) S (1st axis) [unit: pulse]
- **M012** = Lower 2 bytes of the Present pulse position (FB value) L (2nd axis) [unit: pulse]
- **M013** = Upper 2 bytes of the Present pulse position (FB value) L (2nd axis) [unit: pulse]
- **M014** = Lower 2 bytes of the Present pulse position (FB value) U (3rd axis) [unit: pulse]
- **M015** = Upper 2 bytes of the Present pulse position (FB value) U (3rd axis) [unit: pulse]
- **M016** = Lower 2 bytes of the Present pulse position (FB value) R (4th axis) [unit: pulse]
- **M017** = Upper 2 bytes of the Present pulse position (FB value) R (4th axis) [unit: pulse]
- **M018** = Lower 2 bytes of the Present pulse position (FB value) B (5th axis) [unit: pulse]
- **M019** = Upper 2 bytes of the Present pulse position (FB value) B (5th axis) [unit: pulse]
- **M020** = Lower 2 bytes of the Present pulse position (FB value) T (6th axis) [unit: pulse]
- **M021** = Upper 2 bytes of the Present pulse position (FB value) T (6th axis) [unit: pulse]

**NOTE**

- If the pulse is a negative value, the pulse will be output to the register in 2’s complement notation.
- Even in one control group, “command value” or “FB value” can be specified differently for each axis. However, if “command value” and “FB value” are specified for the same axis, the value “0” will be output to the register.
- If “0” is set as the resolution setting parameter (S1CxG640 to 647, S1CxG664 to 671), it will be treated as “1” when output to the register is performed.
- If “0” is set as the register number of output destination (S1CxG632 to 639, S1CxG656 to 663), the present pulse position will not be output to the register. Thus, no value can be output to the register number M000. Also, if the same register number of output destination is used more than twice, the former data will be overwritten by the latter data.
6.13 Softlimit Setting Function

6.13.1 About the Softlimit Setting Function

The softlimit setting function is a function to set the softlimit to limit the range of the manipulator motion in software.

6.13.2 The Softlimit Setting Screen

The softlimit setting screen is displayed only at the teach mode and the management mode.

1. Select (ROBOT) in (Main Menu).
2. Select (SOFTLIMIT SETTING).

   – The softlimit setting screen is displayed.

![Softlimit Setting Screen](image)
6 Convenient Functions
6.13 Softlimit Setting Function

3. Set the control group as desired.

– Switch to the desired control group by [PAGE] or the selection dialog.
– As for the selection dialog, select [PAGE] on the screen and move the cursor to desired control group. Press [SELECT].

6.13.3 Setting the Softlimit by Numerical Value Input

1. Move the cursor to the desired axis of the softlimit (+) or the softlimit (-), and press [SELECT].

2. Enter the values of the softlimit (+) the softlimit (-), and press [ENTER].
– The softlimit is set.
6 Convenient Functions
6.13 Softlimit Setting Function

6.13.4 Set the Current Value to the Softlimit

1. Move the manipulator by the [Axis Key].
   – Move the manipulator to the position of which value is maximum number or minimum number of the softlimit by the [Axis Key].

2. Move the cursor to the desired axis of the softlimit (+) or the softlimit (-).
   – When change the maximum number of the first softlimit, move the cursor to the first axis of the softlimit (+).
   – When change the minimum number of the first softlimit, move the cursor to the first axis of the softlimit (-).

3. Press [MODIFY].
   – The message [Update the data with <ENTER>.] appears.

   ![Image of the interface showing the softlimit settings]

   – If perform the one of the following operations, the modify operation will be canceled.
     • Press [MODIFY].
     • Press [SELECT].
     • Press the one of [↑] [↓] [←] [→].
     • Press [PAGE].
     • Press [DIRECT OPEN].
     • Press [Numeric Key].
     • Select the reserved display.
     • Switch the screen.
     • Switch the mode.
– The message [Update operation with <CHANGE> was canceled.] appears.

4. Press [ENTER].
– The current position is set as the softlimit.
6 Convenient Functions
6.13 Softlimit Setting Function

6.13.5 Set the Softlimit (+)/ the Softlimit (-) to the Initial Maker Value

1. Select {DATA} in the pull-down menu.
   - {Initial Maker Value} appears.

2. Select {Initial Maker Value}.
   - The confirmation dialog appears.

3. Select [YES].
   - The initial maker value is set for all displayed axes.
   The operation is canceled when select [NO].

The initial maker value limits the range of the mechanical motion of the manipulator, and it varies according to the model of the robot.
It is different from the motion range which was set to add the base station axis.
6 Convenient Functions
6.13 Softlimit Setting Function

6.13.6 Change the Coordinate Display of the Softlimit (+)/ the Softlimit (-)

1. Select {DISPLAY} in the pull-down menu.

   – {Coordinate Change} appears.

2. Select {Coordinate Change}.

   – When the displaying coordinate is a pulse, the robot axis is changed to the angle display; the base axis is changed to the distance display; and the station axes is changed for each axis by the value of the station axis display parameter (S2C265 to 288).

When the first bit is OFF, the first axis is changed to the angle display.
When the second bit is ON, the second axis is changed to the distance display.
When the display coordinate is angle/distance, the all axes are changed to the pulse display.

- When the display of the softlimit value is the angle display, the pulse display and the sign may be different.
- Be sure to confirm the motion range by the jog operation after changing the softlimit value.
6.14 Job Edit Function During Playback

6.14.1 Function

Jobs can be edited during playback, including during the play mode.

<Editable> user job

<Not Editable> macro job and system job

6.14.2 Job Edit During Playback

6.14.2.1 Basic Operation

The job edit operation during playback is described below.

1. During playback, select (Main Menu) (JOB), then select the submenu (SELECT JOB).
   - JOB LIST display appears.

2. Select (EDITING) under the pull-down menu (JOB).
6 Convenient Functions
6.14 Job Edit Function During Playback

3. Select the job to be edited from JOB LIST.

4. Edit the selected job.

- The selected job will be registered in the display of the submenu "PLAY EDIT JOB LIST".
- Regarding restrictions on editing, refer to chapter 6.14.2.2 "Editing" at page 6-132.
6 Convenient Functions
6.14 Job Edit Function During Playback

5. Select (WRITING) under the pull-down menu (JOB) to reflect the edited data.

- If the job to be written to is listed in “JOB LIST”, a confirmation dialog “Overwrite?” appears. Select “YES” to reflect the edited data. Refer to the “SUPPLEMENT” on the next page.

- If the job with the same name is not listed in “JOB LIST”, the job to be written to will be added to “JOB LIST”. Refer to the “SUPPLEMENT” on the next page.
6 Convenient Functions
6.14 Job Edit Function During Playback

6.14.2.2 Editing

The data of the selected job (see the step 4 of chapter 6.14.2.1 “Basic Operation” at page 6-129) can be edited in the same manner as the normal teach mode.

However, the functions that affect the manipulator motion are restricted as follows:

- Position teaching cannot be edited.
- The pull-down menu during editing is restricted as shown in fig. 6-1 “Pull-down Menu (EDIT) * Cursor Is on Line No.” to fig. 6-4 “Pull-down Menu (UTILITY)” at page 6-133.

If data is reflected during playback, the message “Requesting playback edit JOB writing” appears, and the status becomes a write request. To write the job, execute the instruction “LATESTJOB” in the write request status or end playback. If data is reflected in the play mode but not during playback, the job will be written immediately.

However, if the job to be written to is being executed (including jobs in the call stack), “Error 5240: Cannot write in the JOB in execution.” appears, and the edited data will not be reflected.

If a job in the call stack is written to in the play mode but not during playback, “Error 5241: Cannot write in the JOB in JOB STACK.” appears, and the edited data will not be reflected.

If data is reflected during teaching, the job will be written immediately.

Fig. 6-1: Pull-down Menu (EDIT) * Cursor Is on Line No.
6 Convenient Functions
6.14 Job Edit Function During Playback

In addition to the job edit operation described above, {CREATE NEW JOB}, {RENAME JOB}, {COPY JOB}, and {DELETE JOB} under the pull-down menu (JOB) are also available.

All of the above operations are performed for the jobs listed in “PLAY EDIT JOB LIST”.

Fig. 6-2: Pull-down Menu (EDIT) * Cursor Is on Instruction

Fig. 6-3: Pull-down Menu (DISPLAY)

Fig. 6-4: Pull-down Menu (UTILITY)
6 Convenient Functions
6.14 Job Edit Function During Playback

To reflect the edited data in the job listed in JOB LIST, {WRITING} must be done.
Regarding {DELETE JOB}, only the jobs listed in "PLAY EDIT JOB LIST" can be deleted. The jobs in "JOB LIST" will not be deleted.

The above {WRITING}, {DELETE JOB}, {RENAME JOB}, and {COPY JOB} can be done in the same manner on the "PLAY EDIT JOB LIST" display.

6.14.2.3 Editing Multiple Jobs

The procedure to delete or write multiple jobs at once on the PLAY EDIT JOB LIST display is described below.

Deleting Multiple Jobs

1. Select {Main Menu} {JOB}, then select the submenu {PLAY EDIT JOB LIST}.

2. Select the job to be deleted by [SHIFT] + [SELECT].
   
   "●" appears on the left of the selected job.

   ![Diagram of job selection](image-url)
6 Convenient Functions
6.14 Job Edit Function During Playback

3. Select {DELETE JOB} under the pull-down menu {JOB}.
   - A confirmation dialog box appears for each selected job. Select “YES” to delete the job from the PLAY EDIT JOB LIST display.

- **Writing to Multiple Jobs**

1. Select {Main Menu} {JOB}, then select the submenu {PLAY EDIT JOB LIST}.

2. Select the job to be written to by [SHIFT] + [SELECT].
   - “●” appears on the left of the selected job.
3. Select {WRITING} under the pull-down menu {JOB}.

- If the job to be written to is listed in JOB LIST, a confirmation dialog “Overwrite?” appears. Select “YES” to reflect the edited data. If “NO” is selected, the edited data will not be reflected. To cancel writing, press [CANCEL] while the confirmation dialog appears. If the job with the same name is not listed in “JOB LIST”, the job to be written to will be added to “JOB LIST”. Refer to the “SUPPLEMENT” below.

If data is reflected during playback, the message “Requesting playback edit JOB writing” appears, and the status becomes a write request. To write the job, execute the instruction “LATESTJOB” in the write request status or end playback. If data is reflected in the play mode but not during playback, the job will be written immediately.

However, if the job to be written to is being executed (including jobs in the call stack), “Error 5240: Cannot write in the JOB in execution.” appears, and the edited data will not be reflected.

If a job in the call stack is written to in the play mode but not during playback, “Error 5241: Cannot write in the JOB in JOB STACK.” appears, and the edited data will not be reflected.

If data is reflected during teaching, the job will be written immediately.
6 Convenient Functions
6.14 Job Edit Function During Playback

6.14.2.4 Canceling Write Request

The procedure to cancel a write request is described below.

- **Canceling Write Request**

1. Select (Main Menu) {JOB}, then select the submenu {PLAY EDIT JOB LIST},
   or select (Main Menu) {JOB}, then select the submenu {JOB EDIT (PLAY)}.

2. Select {WRITING CANCEL} under the pull-down menu {JOB}.
6 Convenient Functions
6.14 Job Edit Function During Playback

CAUTION

- When the mode switch is changed to the teach mode during job editing
  Even if the mode switch is changed to the teach mode without reflecting
  or canceling the edited data, the changed data will be saved. In this
  case, select (Main Menu) {JOB}, then select the submenu {SELECT
  JOB} or (PLAY EDIT JOB LIST) to edit data in the same manner as in
  the play mode. However, position teaching cannot be done.

- Writing a job
  {WRITING} operates differently depending on the status of the robot.
  Select (JOB), then select {WRITING} to reflect the edited data in the
  job. The data is reflected as described below depending on whether
  the job is being executed or not.
  1. When the job is NOT being executed: The data is reflected immediately.
  2. When the job is being executed: The data is reflected when the
     instruction “LATESTJOB” is executed or when the job execution is
     completed.

  “Requesting playback edit JOB writing” appears while waiting for reflect
  operation (during a write request).

- During a file transfer
  {WRITING} cannot be done during file transfer (i.e. external memory
  operation or data transmission).

  In addition, a file cannot be transferred during a write request.

  - During a write request
    Editing is inhibited during a write request (while “Requesting playback
    edit JOB writing” appears).

    To edit data, wait for the writing to be completed or cancel the write
    request.
6 Convenient Functions
6.15 Logging Function

6.15 Logging Function

The logging function allows to save the controller's operation and data editing history (log) in chronological order, and display them on the screen.

Users can select the log obtaining operation and store the log data to an external device.

6.15.2 Objected Data for Logging

The following data can be saved in this function:

- **OPERATION-related Data**
  - START, HOLD, and E-STOP (The operations in the remote mode are also saved in the log.)
  - Mode switching (PLAY/TEACH/REMOTE) (The operations in the remote mode are also saved in the log.)
  - Safety fence OPEN
  - Selecting jobs (including direct open)
  - Calling the master job
  - Initializing the files and jobs
  - Loading and saving files and jobs (normal termination/abnormal termination) (Loading and saving operations by the DCI function or the data transmission function are not saved in logs.)
  - Creating a new job, deleting, renaming, parallel shift job conversion, mirror shift conversion, PAM (position correcting during playback)
  - Changing the home position of the manipulator
  - Login/logoff (Only available when the password protection function (optional) is used.)

- **EDIT-related Data**
  - Job
    - Adding the instructions
    - Changing the requirements in the instructions
    - Deleting the instructions
    - The operation of cut, paste, and reverse paste
    - The operation of UNDO and REDO
    - Editing the job header
    - Line Edit Lock and the comment operation
    - Canceling all the line Edit Lock, canceling all the comment.
  - Editing the conditions file/general data
  - Editing the parameters
6 Convenient Functions
6.15 Logging Function

• Editing the CIO
  Editing on the ladder program window. When compiling is executed, the edit histories (addition/changing/deletion of lines) are output. The recorded times are the actual times at which the lines were edited, so they may not match the time at which compiling was executed.

• Editing variables
  (The operations in the remote mode are not saved in the log.)

• Editing the I/O
  Logs of switching ON and OFF of the general input signals and general output signals are obtained.

NOTE
Only the editing operations by the user itself are targeted for log obtaining. Even if the variables or the I/O states are changed by executing the instructions in the job, they are not recorded in the log.

6.15.3 Number of Entries Stored in the Logs

The number of entries stored in the logs for each data is as follows:

• OPERATION-related Data: 100 entries
• EDIT-related Data: 200 entries

If the number of stored entries exceeds the number described above, old data will be deleted and the new data will be recorded.
6.15.4 Operating Methods

6.15.4.1 Displaying Logs in List

The log list can be referred to with the following procedures:

Main menu → {SYSTEM INFO} → {LOGDATA}

Selecting {LOGDATA} displays the {LOGDATA} window.
6 Convenient Functions
6.15 Logging Function

The list of the logs to be displayed in the \{LOGDATA\} window can be arranged by the log types (OPERATION/EDIT). Selecting \{DISPLAY\} of the pull-down menu displays (ALL), (OPERATION), (EDITING), and only the logs of the selected type will be displayed.

Displays only the OPERATION-related logs.

Displays only the EDIT-related logs.
6.15.4.2 Displaying Log Details

On the (LOGDATA) window, moving the cursor to the desired log and pressing the [SELECT] display the selected log's details.

When touching the {RETURN} button at the bottom of the window or pressing [CANCEL], the window returns to the {LOGDATA} window.

The items displayed in the {DETAIL} window are shown in the tables on the following pages. However, the following items are displayed regardless of whether the displayed log type is OPERATION or EDIT.

- INDEX
- DATE
- EVENT
- LOGIN NAME

6 Convenient Functions
6.15 Logging Function

6.15.4.3 Updating Logging Information

When a new log is added while displaying the (LOGDATA) window, pressing [SELECT] displays a confirmation dialog "The log was added. Update the display?". When selecting "YES", a log data is obtained again and the window is updated.

When selecting "NO", the window display is not updated, but after that, when pressing [SELECT], the same dialog appears again.

When the log display type is set to "OPERATION" or "EDIT", the confirmation dialog described above only when the log belongs to the displayed type is added and [SELECT] is pressed.
6 Convenient Functions
6.15 Logging Function

6.15.4.4 Deleting Logging Information

Only when security is in management mode, selecting “DATA” in the pull-down menu on the LOGDATA window displays (INITIALIZE). Selecting (INITIALIZE) displays the confirmation dialog “Initialize?”. When “YES” is selected, all the logs of the currently displayed type are deleted.
6.15.4.5 Selecting Operations to Acquire Logs

Selecting the operations whose logging data is to be acquired can avoid unnecessary logs from being acquired. When selecting (Main Menu) → (SETUP) → (LOGDATA COND.), the LOGDATA CONDITION SETTING window appears.

Move the cursor to the item to which its logging data is the subject of acquisition, press [SELECT] and then "SAVE" and "NOT SAVE" alternate. Once "NOT SAVE" is selected to an item, its logging data would not be acquired even if "SAVE" is selected.
The item names and the targeted logs are as follows:

<table>
<thead>
<tr>
<th>Item Name</th>

6.16 Analog Output Function Corresponding to Speed

6.16.1 Overview

The analog output function corresponding to speed changes the analog output value automatically, according to the manipulator operating speed. This function does not need resetting of the analog output value according to the operating speed, so that the time required for job teaching can be reduced.

For example, when the thickness of sealing or painting should be constant, the discharged amount of seals or paints can be controlled by the manipulator operating speed.

![Diagram showing speed and discharged amount]

For the analog output function corresponding to speed, the following circuit board is needed.

- Analog output expansion circuit board: JANCD-YEW02-E
6.16 Analog Output Function Corresponding to Speed

6.16.2 Instructions

6.16.2.1 Instructions for Analog Output Function Corresponding to Speed

The instructions, ARATION and ARATIOF, are used for the analog output function corresponding to speed.

**ARATION**

The analog output function corresponding to speed is performed after executing ARATION instruction. This instruction is valid during circular interpolation, linear interpolation or spline interpolation. It is executed only at playback or [FWD] operation; it is not executed during axis operation. This instruction is also used when each set value for the analog output function corresponding to speed is to be changed.

\[
\text{ARATION AO#(1) BV}=10.00 \ V=200.0 \ OFV=2.00
\]

1. **Output port number**
   General analog output port to execute the analog output corresponding to speed
   Setting range: 1 to 40

2. **Basic voltage**
   Voltage to be output at the speed set with the basic speed.
   Setting range: -14.00 to +14.00V

3. **Basic speed**
   Operating speed which becomes the basis for when the set voltage is output.
   Setting range: 0.1 to 1500.0mm/sec
   1 to 9000cm/min

4. **Offset voltage**
   Analog voltage when the operating speed is 0.
   Setting range: -14.00 to +14.00V
6 Convenient Functions
6.16 Analog Output Function Corresponding to Speed

According to the set value of the ARATION instruction, the output characteristics for the relation between the operating speed and the analog voltage are calculated. The analog output function corresponding to speed is executed depending on these output characteristics.

The following graph shows the output characteristics.

Fig. 6-5: Output Characteristics When Analog Output Function Corresponding to Speed is Used

![Graph showing output characteristics]

**NOTE**
When the analog output value exceeds ±14.00 V because of the operating speed, the value is limited within ±14.00 V.

**ARATIOF**
When the ARATIOF instruction is executed, the analog output corresponding to speed is completed, and the set offset voltage becomes the fixed output.

ARATIOF AO#(1)

1. **Output port number**
   General analog output port to end the analog output corresponding to speed
   Setting range: 1 to 40
6 Convenient Functions
6.16 Analog Output Function Corresponding to Speed

6.16.2.2 Registration of Instructions

The instructions can be registered when the cursor is in the address area on the job content display in teach mode. Perform the following operations before registering an instruction.

1. Select {JOB} under {Main Menu}
2. Select {JOB CONTENT}
3. Move the cursor to the address area

**ARATION**

1. Move the cursor to one line above the place to register the ARATION instruction

2. Press [INFORM LIST]
3. Select [IN/OUT]
   - The instruction list dialog appears.

4. Select "ARATION"
   - The ARATION instruction is indicated in the input buffer line.
5. Change any additional items and numerical values
   - <Register without changes>
     To register without changes, perform operation of step 6.
   - <Register with addition or change of the additional items>
     • To change the output port number
       In case of using [SHIFT] and the cursor, move the cursor to the
       output port number, and then press [SHIFT] and the cursor simul-
       taneously, to change the output port number.
       
       In case of using [Numeric Key]s, move the cursor to the output
       port number, and press [SELECT] to display an input buffer line.
       Enter the number, and then press [ENTER] to change the number
       displayed.
     • To change the basic voltage, the speed, and the offset voltage
       Move the cursor to the instruction in the input buffer line, and then
       press [SELECT]. The detail edit display is shown.

       Move the cursor to “UNUSED” of the additional item to be
       changed, and then press [SELECT]. The selection dialog is dis-
       played.
       Move the cursor to the additional item to be changed, and press
       [SELECT].
6 Convenient Functions
6.16 Analog Output Function Corresponding to Speed

When the additional item is changed, press [ENTER]. The detail edit window closes, and the job content window appears.

6. Press [INSERT] and [ENTER]
   – The instruction indicated in the input buffer line is registered.

```
<table>
<thead>
<tr>
<th>The line where ARATION instruction is registered.</th>
</tr>
</thead>
<tbody>
<tr>
<td>0010 M محافظ Y=318</td>
</tr>
<tr>
<td>0032 M محافظ Y=318</td>
</tr>
</tbody>
</table>
```

**ARATIOF**
1. Move the cursor to one line above the place to register ARATIOF instruction

```
<table>
<thead>
<tr>
<th>The line above the place to register ARATIOF instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>0010 M محافظ Y=318</td>
</tr>
<tr>
<td>0032 Mمحافظ Y=318</td>
</tr>
</tbody>
</table>
```

2. Press [INFORM LIST]
3. Select [IN/OUT]
   – The instruction list dialog appears.

```
<table>
<thead>
<tr>
<th>JOB</th>
<th>EDIT</th>
<th>DISPLAY</th>
<th>UTILITY</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```

4. Select "ARATIOF"
   – The ARATIOF instruction is indicated in the input buffer line.

```
<table>
<thead>
<tr>
<th>ARATIOF A ש (1)</th>
</tr>
</thead>
</table>
```

5. Press [INSERT] and [ENTER]
   – The ARATIOF instruction is registered.

```
| 0030 M محافظ Y=318 |
| 0031 ARATIOF A ש (1) |
| 0032 Mمحافظ Y=318 |
```
6.16.2.3 Analog Output Display

The current settings can be confirmed on the analog output window.

1. TERMINAL
   General analog output port

2. OUTPUT (V)
   Indicates the voltage which is currently output.

3. BASIC (V)
   Indicates the basic voltage used for the analog output corresponding to speed.
   This value is used until a new value is set by ARATION instruction.

4. TRAIT
   Indicates the current output characteristics of the output port.
   SP RAT : during execution of the analog output corresponding to speed
   STATIC : fixed output status

5. OFFSET (V)
   Indicates the offset voltage used for the analog output corresponding to speed.
   This value is used until a new value is set by ARATION instruction.

6. BASIC SPD
   Indicates the basic speed used for the analog output corresponding to speed.
   This value is used until a new value is set by ARATION instruction.

7. ROBOT
   Indicates the manipulator number for the analog output corresponding to speed.

1. Select {IN/OUT} in the {Main Menu}
2. Select {ANALOG OUTPUT}
   – The analog output window appears.
   The output terminal numbers which follow the AOUT4 can be switched and displayed by pressing [PAGE].
6.16.3 Examples

6.16.3.1 Examples of Output Characteristics

The graph below shows the change in the output characteristics when the following job is done.

```
MOVJ VJ=50.00
ARATION AO#(1) BV=7.00 V=150.0 OFV=-10.00 7.00
MOVL V=50.0 -4.33
MOVC V=100.0 1.33
MOVC V=100.0 1.33
MOVC V=100.0 1.33
MOVL V=200.0 12.67
```
6 Conveni ent Functions
6.16 Analog Output Function Corresponding to Speed

6.16.3.2 Example of Variation of Operating Speed and Analog Output Value

The following graph shows the change of the analog output according to the speed variation.

MOVL V=200.0
\[\begin{array}{l}
\text{RATION AO}(1) \ BV=10.00 \ V=200.0 \ OFV=-2.00 \\
\text{MOV C} \ V=150.0
\end{array}\]

MOVC VR=20.0 (When the tool center point speed is 100 mm/s)

MOVC V=150.0 (When the tool center point speed is 180 mm/s)

MOVL V=180.0

AOUT AO(1) 10.00

Fig. 6-6: Analog Voltage according to Speed

- Since the analog output corresponding to speed is made for the calculated speed, there may be little difference from the actual operating speed of the manipulator.

- When a posture speed is specified, the analog output corresponding to speed is made for the operating speed at the tool center point with the posture speed.

6 Convenient Functions
6.16 Analog Output Function Corresponding to Speed

6.16.4 Filter Process

In the analog output function corresponding to speed, the output analog signal can be filtered by setting a filter constant at the parameters.

6.16.4.1 When Parameter is Set to “0”

The analog signal according to the speed reference (the speed determined by a path operation) is output.

![Graph](image)

6.16.4.2 When Parameter is Set to Values Other Than “0”

The analog signal according to the speed of filtered speed reference is output. By the filter process, the output signal can be close to the manipulator’s actual speed.

![Graph](image)

6.16.4.3 Parameter Setting

Adjust the settings of parameters during actual operations.

</tbody>
</table>

The standard parameter settings are as follows.

- For small capacity robot with a payload 6 kg and 16 kg
  
  Primary filter constant : 50 msec
  Secondary filter constant : 50 msec

- For large capacity robot with a payload 60 kg and 130 kg
  
  Primary filter constant : 100 msec
  Secondary filter constant : 100 msec
6.16.5 Precautions

6.16.5.1 When Analog Output Corresponding to Speed is Interrupted

If the manipulator is stopped for some reason and the editing operation is performed, the analog output corresponding to speed is interrupted. This interruption is performed in all output terminals, and the analog voltage fixed immediately before the interruption is output to each output terminal.

The analog output corresponding to speed is not interrupted in any other cases.

6.16.5.2 When More than One Manipulator is Used

The attribute of the job where the instruction is executed determines the manipulator where the analog output corresponding to speed is performed.

For a coordinated job, the analog output corresponding to speed is performed at the operating speed of the manipulator at the slave side.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.1 Outline

This function codifies the status of the DX200 (system configuration, alarm information, or current position data, etc.) into a QR code and displays it on the programming pendant display.

By using this function, user can send the current status of DX200 to Yaskawa representative rapidly and accurately when making inquiries or an abnormality happened.

Also, with an Android application called "MOTOMAN Touch!", user can send both the QR code pasted on the DX200 in which its serial number, etc. are codified and its circumstantial pictures to the Yaskawa representative at a time. This application enables to send correct information in a short period of time and helps customer to reduce down time accordingly.
6 Convenient Functions
6.17 QR Code Creation Function

<QR Code Creation Function>

• While the QR Code Creation function is under function, only following keys and the exclusive keys used for this function are available. (for the key exclusively used for this function, refer to chapter 6.17.5 “Operation Method”.

[START]
[HOLD]
[E.STOP] button
Enable switch

Accordingly, operation of the manipulator in the teaching mode (jog operation) is not available. The manipulator stops its operation if the QR Code Creation function is executed.

Do not complete the QR Code Creation function while the axis operation key is being pressed because the operation triggered by the key immediately resumes when the function completes.

• Even if PLAYBACK OPERATION CONTINUATION FUNCTION (S2C437=1) is set valid, its window would not appear if the QR Code Creation Function is executed.

<MOTOMAN Touch!>

• Inquire of Yaskawa representative for downloading method of “MOTOMAN Touch!”.

• “MOTOMAN Touch!” is not designed to avoid failures or reduce the recovery time.

• When sending data using “MOTOMAN Touch!”, set a call center at your Yaskawa representative. Otherwise, reply from Yaskawa may delay.

“MOTOMAN Touch!” is an application which operates in Android 4.0.3 (API level 15) or higher environment. However, depending on the manufacturers or type of the smart phone, it may not work.

QR code is a trademark of DENSO WAVE INCORPORATED.

Android is a trademark of Google Inc.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.3 QR Code Creation Function Start-Up Method

6.17.3.1 Start-up the function by pressing {SYSTEM INFO} under the main menu→{QR CODE}.

1. Select {SYSTEM INFO} under the main menu.
   - {QR CODE} appears in the sub menu.

2. Select {QR CODE} from the sub menu.
   - QR CODE Creation function starts up.
3. Select data to be codified into a QR code, and then press the {Create} button.
   – A QR code appears.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.3.2 Start-up the function by selecting {UTILITY} under the pull down menu → {QR CODE DISPLAY}

1. Select {UTILITY} under the pull down menu.
   – {QR CODE} appears in the sub menu when the window has a function to display QR code data.

2. Select {QR CODE DISPLAY} from the sub menu.
   – QR CODE Creation function starts up and a QR code of the data displayed on the window appears.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.3.3 Start-up the function by selecting (UTILITY) under the pull down menu → (QR CODE ALL PAGE)

1. Select (UTILITY) under the pull down menu.
   - (QR CODE) appears in the sub menu when the window has a function to display a QR code data.

2. Select (QR CODE ALL PAGE) from the sub menu.
   - QR Code Creation function starts up and QR codes of the window on which page switching or display switching is available appear.
   (when ALARM HISTORY is selected, data for the latest ten alarms at each alarm are created)
6 Convenient Functions
6.17 QR Code Creation Function

6.17.4 Display Configuration

The window for the QR Code Creation Function consists of two areas.

- Data for QR code select area
- QR code display area

Data for QR code select area       QR code display area

Displaying status of the button varies depending on the ON/OFF of the button function or the shift of the focusing point.

Example: (Next)

<table>
<thead>
<tr>
<th>Normal display</th>
<th>Active display</th>
<th>No display</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Next</td>
<td></td>
</tr>
</tbody>
</table>

The QR code number and the total number of QR codes are displayed in the QR code display area.
6.17.5 Operation Method

6.17.5.1 Data for QR Code Select Area

Select data to be codified into a QR code and press {Create} button. A QR code appears.

For the above mentioned operation, use programming pendant keys or directly touch the display.

When using the programming pendant keys, following keys are available.

- **Cursor**
  - Shift the area to be focused

- **[SELECT]**
  - When the focus is in the list area of data to be codified into a QR code, select a data to be codified into the QR code
  - When the focus is on {Create}, create a QR code

- **[PAGE]**
  - Display the following QR code one by one
    (if more than two QR codes are created)
  - Display the previous QR code by pressing [SHIFT] + [PAGE].

- **[AREA]**
  - Shift the area to be focused

- **[CANCEL]**
  - Complete the QR Code Creation Function.

6.17.5.2 QR Code Display Area

Display a QR code or switch QR codes one by one.

For the above mentioned operation, use programming pendant keys or directly touch the display.

When using the programming pendant keys, following keys are available.

- **Cursor**
  - Shift the area to be focused

- **[SELECT]**
  - When the focus is on {Return}:
    Display the first QR code
  - When the focus is on {Back}:
    Display the previous QR code
  - When the focus is on {Next}:
    Display the next QR code
  - When the focus is on {Close}:
    Complete the QR Code Creation Function.

- **[PAGE]**
  - Display the following QR code one by one
    (if more than two QR codes are created)
  - Display the previous QR code by pressing [SHIFT] + [PAGE].
6.17 QR Code Creation Function

- **[AREA]**
  - Shift the area to be focused

- **[CANCEL]**
  - Complete the QR Code Creation Function.

### 6.17.6 QR Code Structure

#### 6.17.6.1 Basic Structure

The basic structure of a QR code is shown below.

- **Data header**
- **System information**
- **Data 1**

When the volume of the data is too large, this function divides the data into several sections before codifying into a QR code. At this time, the data header and the system information is set to the first data.

- **Data header**
- **System information**
- **Data 1**

- **Data 2**

- **Data 3**

" , (comma) , " (space)" , and "(new line character)" are employed to separate the data.

Data which is not selected in the "Data for QR code select area" will not be codified into the QR code.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.2 Data Header

<table>
<thead>
<tr>
<th>No</th>
<th>Item</th>
<th>Construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Version</td>
<td>??x.xx</td>
</tr>
<tr>
<td>2</td>

<td>YYMMDD</td>
</tr>
<tr>
<td>3</td>
<td>Time</td>
<td>HHTT</td>
</tr>
</tbody>
</table>

Note: “?” : any one character, “*”: any line, “X”: any number

1. Version
   Structure: “??x.xx”
   ?? : Version of the controller
       If the controller is DX200, “D2” is indicated.
   x.xx : Version of the QR Code Creation function
           (decimal number)

2. Year, Month, Date
   Structure: “YYMMDD”
   YY : Year when the QR code is created (last two digits)
   MM : Month when the QR code is created
   DD : Date when the QR code is created

3. Time
   Structure: “HHTT”
   HH : Hour when the QR code is created
   TT : Minute when the QR code is created

6.17 QR Code Creation Function

6.17.6.4 Alarm

Four alarms can be codified into the QR code at maximum in ascending order.

<table>
<thead>
<tr>
<th>No</th>
<th>Item</th>
<th>Construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Alarm data code</td>
<td><code>&lt;Alarm&gt;</code></td>
</tr>
<tr>
<td>2</td>
<td>Alarm data</td>
<td>Refer to “Alarm Data”</td>
</tr>
</tbody>
</table>

1. **Alarm data code**
   Structure: `<Alarm>`
   The first line of the alarm data

- **Alarm Data**

<table>
<thead>
<tr>
<th>No</th>
<th>Item</th>
<th>Construction</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Alarm number</td>
<td>xxxx</td>
</tr>
<tr>
<td>2</td>
<td>Sub code</td>
<td>*</td>
</tr>
<tr>
<td>3</td>
<td>Information about options</td>
<td>*</td>
</tr>
<tr>
<td>4</td>
<td>Date of alarm occurrence</td>
<td>YYYY/MM/DD</td>
</tr>
<tr>
<td>5</td>
<td>Time of alarm occurrence</td>
<td>HH:TT:SS</td>
</tr>
</tbody>
</table>

Note: “?” : any single character, “*” : any line, “X” : any number

1. **Alarm number**
   Structure: `xxxx`
   Alarm number

2. **Sub code**
   Structure: `* *`
   Sub code
   Only the inverted characters are displayed if there are.

Example: Sub code

```
ALARM 4414 TASK#2
EXCESSIVE SEGMENT
[R1:HIGH : SL]  
[R1 : HIGH : RT]
```

3. **Information about options**
   Structure: `* *`
   Sub code
   Information about options
## Convenient Functions

### 6.17 QR Code Creation Function

#### 4. Date of alarm occurrence

Structure: ": YYYY/MM/DD"

Date when the alarm occurred

#### 5. Time of alarm occurrence

Structure: ": HH:TT:SS"

Time when the alarm occurred

### 6.17.6.5 Alarm History

The latest ten alarms, in the order of registration, for each alarm can be codified.

<table>
<thead>

6.17.7 MOTOMAN Touch!

6.17.7.1 Installing Method of MOTOMAN Touch! (In case downloading from Google Play is not available)

1. Connect a smart phone to the PC using an USB cable.
2. Start Explorer on the PC, and then copy “MOTOMAN Touch.apk” file and paste it in the “Download” folder on the smart phone (refer to fig. 6-7).
3. Tap the Download folder in the file manager of the smart phone (refer to fig. 6-8).
4. Tap “MOTOMAN Touch.apk” (refer to fig. 6-9).
5. Tap {Settings} when “Install blocked” dialog box appeared (refer to fig. 6-10).

Fig. 6-7:

Fig. 6-8:

Fig. 6-9:

Fig. 6-10:
6 Convenient Functions
6.17 QR Code Creation Function

Setting of “apk file” install permission to smart phone → permit install

1. Scroll to find “Security” screen and then check “Unknown sources” (refer to fig. 6-11 and fig. 6-12).
2. Tap {OK} on the “Unknown sources” dialog box (refer to fig. 6-13).
3. Tap {Install} (refer to fig. 6-14).
6 Convenient Functions
6.17 QR Code Creation Function

6.17.2 Start-Up MOTOMAN Touch! Application

1. Tap “MOTOMAN Touch!” icon.

2. “Software License Agreement” screen appears at the first start-up. Confirm it and tap {Agree} (refer to fig. 6-15).

3. “MOTOMAN Touch!” log-in screen appears. Tap {Use without log-in} (refer to fig. 6-16).

   CAUTION

   • Log-in function is not available yet.

4. “MOTOMAN Touch!” home screen appears (refer to fig. 6-17).

   – Basic operation

   • To return to the previous screen, press return button  on the smartphone.

   • To return to the “MOTOMAN Touch!” home screen, tap the robot icon on the screen.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.7.3 Setting of Call Center

Initially set a call center as a destination of the e-mail. This setting is necessary for the use of “MOTOMAN Touch!”.

The e-mail created with “MOTOMAN Touch!” application is sent to this call center.

1. Tap “Call center information setting”  on the “MOTOMAN Touch!” home screen (refer to fig. 6-17).

2. Tap the pen mark  at the very bottom of the “Call Center Information” screen (refer to fig. 6-18).

3. Tap the vacant box next to “Country” on the “Call Center Select” screen (refer to fig. 6-19).

4. Select a country where the user is (refer to fig. 6-20).

5. Choose and tap your Yaskawa representative on “Company/Office” screen (refer to fig. 6-21).

6. The screen returns to “MOTOMAN Touch!” home screen and shows the details of the Yaskawa representative the customer has chosen (refer to fig. 6-22).

7. To return to “MOTOMAN Touch!” home screen, press return button on the smart phone (refer to fig. 6-23).

Fig. 6-18:  Fig. 6-19:  Fig. 6-20:  Fig. 6-21:  Fig. 6-22:  Fig. 6-23:

6.17.7.4 Registration of Customer Information

Initially set the corresponding information. To the e-mail address set in this chapter, an reply mail is returned from the call center to which the customer has sent the QR code information. In this consequence, set the information correctly.

1. Tap {Registration of Customer Info} on the “MOTOMAN Touch!” home screen (refer to fig. 6-17).
2. Input data to “Company name”, “Address”, “Post Code”, “Country”, and “Name” (refer to fig. 6-25).
3. Tap the check mark at the bottom of the screen (refer to fig. 6-26).

CAUTION

- Tap the check mark to save the input customer information to the smart phone memory.

To confirm the saved customer information, return to the “MOTOMAN Touch!” home screen, and then tap {Registration of Customer Info} (refer to fig. 6-26).

Fig. 6-26:
6 Convenient Functions
6.17 QR Code Creation Function

6.17.7.5 Reading of Product Code

This function reads the QR code pasted on the DX200. Setting of this function is necessary for the use of “MOTOMAN Touch!”.

1. Tap {Product code reading} on the “MOTOMAN Touch!” home screen (refer to fig. 6-17).

2. Start the camera function of the “MOTOMAN Touch!” (refer to fig. 6-27). Focus the QR code on the DX200 so that it is captured in the red square.

3. When the QR code is successfully captured, “Serial number of product” appears on “Product Information” screen (refer to fig. 6-28).

Tap the mail button and proceed to the step described in chapter 6.17.7.7 “Inquiry Mail”.

CAUTION

- Use zoom or flash function in accordance with the imaging condition. If the image is not appropriately auto focused, touch the QR code in the screen to adjust the focus.
6 Convenient Functions
6.17 QR Code Creation Function

6.17.7.6 Calling Up of the Product Code

Up to 100 QR codes can be called up again on “Reading history of product code” screen.

1. Tap {Reading history of product code} on the “MOTOMAN Touch!” home screen (refer to fig. 6-17).

2. Tap the desired QR code on “Reading history of product code” screen (refer to fig. 6-29) to see the serial number of the product (refer to fig. 6-28).

3. Tap the mail button and proceed to the next step (chapter 6.17.7.7 “Inquiry Mail”).

CAUTION

- To delete all the history, tap the deleting button at the bottom of the screen. Please be careful that the deleted history data is never restored again.

Fig. 6-29:
6 Convenient Functions
6.17 QR Code Creation Function

6.17.7 Inquiry Mail

After reading the QR code of the product, user can choose attaching data and send an e-mail to the customer’s call center on this screen (refer to fig. 6-30).

1. {Add controller data (Read the QR code)}
   With this button, reading of the DX200 QR code displayed on the programming pendant window and sending of the code by attaching to an e-mail are available. (In this case, this code is not left in the creation history.)

2. {Attach photo}
   Attaching of pictures already taken by the smart phone to an e-mail is available. Tap this button to open the photo gallery and select desired pictures one by one. It is not possible to select all the desired pictures at a time.

3. {e-mail sending}
   This button enables to send a QR code of a product to the customer’s call center. If the DX200 QR code and pictures are already selected, they are also sent as attachments.

There are three ways of accessing methods to the call center:

- **{QR code transmission only}**: Send an inquiry e-mail
  This method is employed if corresponding with the call center through phone call is already started. The QR code information is sent as supplementary information.

- **{QR code transfer and incoming call}**: Make a phone call to the call center after sending an inquiry e-mail
  This method is employed if the customer is planning to make an inquiry phone call to the call center after sending the e-mail.

- **{Call back request with QR code}**: Require a phone call from the call center after sending an inquiry e-mail
  This method is employed if the customer requires a reply call from the call center after sending the e-mail.

6.17.7.8 Sending Method of Controller Data

1. Tap {Add controller data (Read the QR code)} on the “Inquiry Email” screen (refer to fig. 6-30).
2. “QR codes that has already been read” screen appears and those QR codes are displayed (Refer to fig. 6-31). No codes are displayed at the beginning.
3. Tap camera button 📷 .
4. The camera function starts (refer to fig. 6-32). Focus the QR code on the programming pendant so that it is captured in the red square.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Use zoom 📸 or flash ⚡ function in accordance with the imaging condition. If the image is not appropriately auto focused, touch the QR code in the screen to adjust the focus.</td>
</tr>
</tbody>
</table>

5. When the QR code is successfully captured, the product information appears on {Controller Data} screen (refer to fig. 6-33).
6. Repeat the above mentioned step 3 📷 to take more than two codes (refer to fig. 6-34).
7. After all the codes are read, tap the complete button ✅ (refer to fig. 6-34).
8. “Inquiry Email” screen appears again. The box on the left side of {Add controller data (Read the QR code)} button is checked to report that reading of all the codes are complete (refer to fig. 6-35).

6 Convenient Functions
6.17 QR Code Creation Function

6.17.7.10 Sending an E-Mail: Transmission type (QR code transmission only)

1. Tap {e-mail sending} on "Inquiry Email" screen (refer to fig. 6-30).
2. Select {QR code transmission only} on the "Transmission type" dialog box, and then tap {OK} (refer to fig. 6-39).

(Supplementary Explanation)
From the next time, the "Transmission type" selected in this step is repeatedly and automatically selected.

3. Tap {OK} on "e-mail sending" screen (refer to fig. 6-40).

(Supplementary Explanation)
On this screen, the transmission type can be selected by not only tapping {OK}, but also by tapping the indication, {QR code transmission only}.
Furthermore, by tapping the indication of the call center, which is right below the "e-mail address", customer can change the e-mail sending address.

4. Select a mailer on "e-mail sending" screen, here, tap {Gmail} as an example (refer to fig. 6-41).

5. The selected mailer starts-up, title of the {QR code transmission only} mail and QR code information are posted to this mail, and the selected pictures are attached. Also, the customer information registered on {Registration of Customer Info} screen is posted at the end of the mail (refer to fig. 6-42).

6. The e-mail is finally sent out with some messages if any.

Gmail is a trademark of Google Inc.

---

Fig. 6-39: In Inquiry Email screen, tap {email sending}.
Fig. 6-40: Select {QR code transmission only} on the Transmission type dialog box.
Fig. 6-41: Select a mailer, here, tap {Gmail}.
Fig. 6-42: The selected mailer starts-up, title of the {QR code transmission only} mail and QR code information are posted to this mail, and the selected pictures are attached. Also, the customer information registered on {Registration of Customer Info} screen is posted at the end of the mail.
6 Convenient Functions

6.17 QR Code Creation Function

6.17.7.11 Sending an E-Mail: Transmission type (QR code transfer and incoming call)

1. Tap {e-mail sending} on “Inquiry Email” screen (refer to fig. 6-30).
2. Select {QR code transfer and incoming call} on the “Transmission type” dialog box, and then tap {OK} (refer to fig. 6-39).

(Supplementary Explanation)
From the next time, the “Transmission type” selected in this step is repeatedly and automatically selected.

3. Tap {OK} on “e-mail sending” screen (refer to fig. 6-43).

(Supplementary Explanation)
On this screen, the transmission type can be selected by not only tapping {OK}, but also by tapping the indication, {QR code transfer and incoming call}.
Furthermore, by tapping the indication of the call center, which is right below the “e-mail address”, customer can change the e-mail sending address. This modification is reflected to the call center information. And the newly selected e-mail address appears prior to other addresses from the next time.

4. Select a mailer on "e-mail sending" screen, here, tap {Gmail} as an example (refer to fig. 6-41).

5. The selected mailer starts-up, title of the {QR code transfer and incoming call} mail and QR code information are posted to this mail, and the selected pictures are attached. Also, the customer information registered on (Registration of Customer Info) screen is posted at the end of the mail (refer to fig. 6-41).

6. The e-mail is finally sent out with some messages if any.

7. When the screen returns to “e-mail sending” screen (refer to fig. 6-43) after the e-mail is successfully sent, tap a telephone number indicated right below “Phone number of call center”.

8. Select a telephone application (refer to fig. 6-44). Here, tap {Dial}.

9. The call center phone number is posted to the dial application. Tap the call button to make a phone call (refer to fig. 6-45).

Fig. 6-43: Fig. 6-44: Fig. 6-45:
6 Convenient Functions
6.17 QR Code Creation Function

6.17.7.12 Sending an E-Mail: Transmission type (Call back request with QR code)

1. Tap {e-mail sending} on “Inquiry Email” screen (refer to fig. 6-30).

2. Select {Call back request with QR code} on the “Transmission type” dialog box, and then tap {OK} (refer to fig. 6-39).

(Supplementary Explanation)
From the next time, the “Transmission type” selected in this step is repeatedly and automatically selected.

3. Tap {OK} on “e-mail sending” screen (refer to fig. 6-46).

(Supplementary Explanation)
On this screen, the transmission type can be selected by not only tapping (OK), but also by tapping the indication, (Call back request with QR code).

Furthermore, by tapping the indication of the call center, which is right below the “e-mail address”, customer can change the e-mail sending address. This modification is reflected to the call center information. And the newly selected e-mail address appears prior to other addresses from the next time.

 Likewise, by tapping a telephone number indicated right below “Phone number of call center”, the phone number the customer desired to be called can be changed. However, this modification is valid only once and for all and does not influence the previously registered telephone number to customer information.

4. Select a mailer on “e-mail sending” screen, here, tap {Gmail} as an example (refer to fig. 6-41).

5. The selected mailer starts-up, title of the {Call back request with QR code} mail and QR code information are posted to this mail, and the selected pictures are attached. Also, the customer information registered on {Registration of Customer Info} screen is posted at the end of the mail (refer to fig. 6-47 and fig. 6-48).

6. The e-mail is finally sent out with some messages if any.

Fig. 6-46:
Fig. 6-47:
Fig. 6-48:
6.18 Time Measuring Function

6.18.1 Time Measuring Function

Time measuring function measures the execution time for the specified section in the job or the signal output time of the specified signal.

6.18.2 Timer Variable

The result measured by the time measuring function is stored in the timer variable. The contents of the timer variable can be checked in the timer variable window.

To display the timer variable window, select "VARIABLE" and then "TIMER VARIABLE".

* The unit is 0.01 sec. (example: 1.00sec for 100)

* When setting a name to the timer variable which is set to be displayed in the job window, the set name and the time measurement result are displayed in the job window.

A. Move the cursor to a variable number

Move the cursor to any variable number and press [SELECT] to display the numerics input box. After inputting a variable number in the box, press [ENTER]. The cursor moves to the variable number.

B. Edit variable contents

The contents cannot be edited, but can be updated by executing the SETTM instruction.

C. Register a variable name

Move the cursor to the "NAME" of the variable number to be registered and press [SELECT]. The character input line appears. After inputting a variable name, press [ENTER] to register the input variable name.
6.18.3 Time Measuring Method

To measure the time, use the SETTM instruction of INFORM instructions.

**SETTM**

<table>
<thead>
<tr>
<th>SUBSET</th>
<th>STANDARD</th>
<th>EXPANDED</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not Available</td>
<td>Available</td>
<td>Available</td>
</tr>
</tbody>
</table>

**Function**

Execute these functions, such as to start measuring, to end, to reset, and to set the time.

**Construction**

1. **TM variable number**

Add the following tag.

<table>
<thead>
<tr>
<th>No</th>
<th>Tag</th>
<th>Explanation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>TM variable number</td>
<td>Specifies the TM variable number for the measurement time writing.</td>
<td>Number: 0 to 59</td>
</tr>
</tbody>
</table>
6 Convenient Functions
6.18 Time Measuring Function

2. TMSTART/TSTOP/TRESET/D Variable number/LD Variable number/D [Arrangement number]/LD [Arrangement number]/Constant/TM Variable number

Select one of them shown in the table below.

<table>
<thead>
<tr>
<th>No</th>
<th>Tag</th>
<th>Explanation</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>TSTART</td>
<td>Specifies to start the time measurement.</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>TSTOP</td>
<td>Specifies to finish the time measurement.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>TRESET</td>
<td>Specifies to reset the time measurement.</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>D Variable number / LD Variable number / D [Arrangement number] / LD [Arrangement number] / [Constant]</td>
<td>Specifies the time measurement by the integer type variable. Number: -2147483648 to 2147483647</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>TM variable number</td>
<td>Specifies the time measurement by timer variable. Number: 0 to 59</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

The motion setting of SETTM is shown below.

(1) SETTM TM000 TSTART
Starts measuring and sets the measuring time on TM000.

(2) SETTM TM000 TSTOP
Finishes measuring and sets the measuring time on TM000.

(3) SETTM TM000 TRESET
Sets 0 for the measuring time of TM000.

(4) SETTM TM000 1000
Sets 1000 for the measuring time of TM000, and starts measuring at the same time.

(5) SETTM TM000 TM001
Sets TM001 for measuring time of TM000, and starts measuring at the same time.
6.18.4 Setting for Time Measurement

For time measurement, set a measuring method for each timer variable. Perform the setting in the SETTM SETUP window.

Display the SETTM SETUP window as follows:

1. Set the management mode or higher to the security mode.
2. Select “SETUP” under the main menu. Then select “SETTM SETUP”.

A. Displays a timer variable number whose time measuring method is to be set.
   To change the timer variable number, press the [PAGE] key or the PAGE button at the bottom of the window.

B. Sets whether to display the result in the job window.
   Select “OFF”, “ON(LINE1)”, “ON(LINE2)”, or “ON(LINE3)”. When “ON(LINE1)”, “ON(LINE2)”, or “ON(LINE3)” is selected, the time measuring result is displayed on the specified line in the auxiliary area of the job window. The same setting cannot be performed for two or more timer variables. For example, while “ON(LINE1)” is set for the timer variable 0, it is changed to “OFF” if “ON(LINE1)” is specified for the timer variable 1.

C. Sets a measuring target.
   Select “ELAPSED TIME”, “SIGNAL ON TIME” or “SIGNAL OFF TIME”. When “ELAPSED TIME” is selected, the time measuring target is the elapsed time in the specified section. When “SIGNAL ON TIME” or “SIGNAL OFF TIME” is selected, the time measuring target is ON or OFF time of the specified signal in the specified section.

D. Sets a signal number whose time is to be measured when the measuring target is “SIGNAL ON TIME” or “SIGNAL OFF TIME”.

E. Selects the time measuring type from “LOCAL” and “GLOBAL”.
   If “LOCAL” is selected, only the time when the job is executed is measured. If “GLOBAL” is selected, the time when the job is stopped is also measured.
6 Convenient Functions
6.18 Time Measuring Function

F. Sets an additional output destination where the measuring time is to be output.
Select “NONE”, “UNIVERSAL OUTPUT (2GROUP)”, “UNIVERSAL OUTPUT (4GROUP)”, “REGISTER (1)” or “REGISTER (2)”. When “UNIVERSAL OUTPUT (2GROUP)”, “UNIVERSAL OUTPUT (4GROUP)”, “REGISTER (1)” or “REGISTER (2)” is selected, the measuring time is set to the specified output destination.

G. Sets a signal number to be output additionally when the additional output target is “UNIVERSAL OUTPUT 2 GROUP” or “UNIVERSAL OUTPUT 4 GROUP”.
* (example) -32768 to 32767 is output for “UNIVERSAL OUTPUT 2 GROUP”.

Sets a register number to be output additionally when the additional output target is “REGISTER 1” or “REGISTER 2”.
* (example) As for “REGISTER 1”, 0 to 32767 is output when the measuring time is a positive value.
65535 to 32768 is output when the measuring time is a negative value.
* When the measuring time is out of the output range, the minimum value or the maximum value of the output range is output.

6.18.5 Displaying the Time Measuring Result in the Job Window

The time measuring result can be checked in the job window.
Display the time measuring result in the job window as follows:
1. Set the management mode or higher to the security mode.
2. Select “SETUP” under the main menu. Then select “SETTM SETUP”.
3. Set “ON(LINE1)”, “ON(LINE2)” or “ON(LINE3)” to DISPLAY ON JOB CONTENT in the SETTM SETUP window.
4. Select (JOB) under the main menu. Then select (JOB CONTENT).
5. Select (DISPLAY) and (TIME MEASUREMENT) in the pull down menu.
6 Convenient Functions
6.18 Time Measuring Function

A. Displays the timer variable number.
B. Displays the timer variable name.
C. Displays the time measuring result.
* Up to three time measuring results can be displayed.
## 7 External Memory Devices

### 7.1 Memory Devices

The following memory devices can be used in the DX200 to save and load data such as jobs and parameters.

<table>

</tbody>
</table>

¹ For the operation, refer to instruction manuals for each optional function.
7.1.1 Compact Flash (CF Cards)

The programming pendant is equipped with CF card slot. Use the FAT16 or FAT32 formatted Compact Flash.

7.1.1.1 Recommended Compact Flash Cards

Refer to “9.1.2 Device” in “DX200 INSTRUCTIONS (RE-CTO-A220)” for the recommended products used for external memory of DX200. Model numbers are subject to be updated due to termination of product and new addition. Contact Yaskawa representative when necessary.

7.1.1.2 Notes on handling Compact Flash

• Do not drop or bend exerting any shock or strong force to the Compact Flash.
• Keep away from water, oil, organic solvent, dust, and dirt.
• Do not use or keep the Compact Flash in places where strong static electricity or electronic noise may occur.
• Do not insert or remove the Compact Flash or turn OFF the power when accessing the Compact Flash (writing-in or reading-out the Compact Flash data).
• To protect the data, back up the data regularly on other media. Damages or loss of data due to operation errors or accidents can be minimized.

*Compact Flash has a limited life span.

The life span differs depending on products or status of use. However, normal use of Compact Flash as an external memory device for the DX200 does not adversely affect the Compact Flash. For details, refer to instruction manuals for each medium.
7.1.3 Inserting a Compact Flash

When inserting a Compact Flash, take note of insertion direction.

With the notch and clip of the Compact Flash downward, insert the Compact Flash slowly into the slot of the programming pendant of which display faces up.

Forcible insertion may result in damage to the Compact Flash or CF card slot.

After inserting the card, be sure to close the cover of the slot before starting operation.

Fig. 7-1: Using a Compact Flash Card
7.1.2 USB Memory Stick

The programming pendant or the CPU circuit board (JANCD-YCP21) is equipped with a USB connector. Use the FAT16 or FAT32 formatted USB memory stick.

7.1.2.1 Recommended USB Memory Stick

Refer to “9.1.2 Device” in “DX200 INSTRUCTIONS (RE-CTO-A220)” for the recommended products used for external memory of DX200. Model numbers are subject to be updated due to termination of product and new addition. Contact Yaskawa representative when necessary.

7.1.2.2 Notes on handling USB Memory Stick

• Do not drop or bend exerting any shock or strong force to the Compact Flash.
• Keep away from water, oil, organic solvent, dust, and dirt.
• Do not use or keep the Compact Flash in places where strong static electricity or electronic noise may occur.
• Do not insert or remove the Compact Flash or turn OFF the power when accessing the Compact Flash (writing-in or reading-out the Compact Flash data).
• To protect the data, back up the data regularly on other media. Damages or loss of data due to operation errors or accidents can be minimized.

*USB memory stick has a limited life span.

The life span differs depending on products or status of use. However, normal use of USB memory stick as an external memory device for the DX200 does not adversely affect the USB memory stick. For details, refer to instruction manuals for each medium.
7.2.3 Rules for USB Drive and USB Memory Stick

Followings are the rules of the USB drive on the CPU circuit board (JANCD-YCP21) and the USB memory stick to be installed.

1. **Prohibition of insertion/removal of the USB memory stick during control power ON**
   The device recognition process is executed when the USB memory stick is inserted. Do not insert or remove the USB memory stick while the control power supply is ON. Failure to observe this rule may affect the operation of the manipulator (cycle time).

2. **Prohibition of disconnection of the control power and insertion/removal of USB memory stick during file access**
   Do not disconnect the control power or insert/remove the USB memory stick during file access. Failure to observe this rule may breakdown the FAT.

3. **Operating temperature range of USB memory stick**
   Use a USB memory stick that is guaranteed to work in the range of temperature of the DX200.

4. **USB memory stick’s falling off by controller vibration**
   Prevent the USB memory stick from falling off by the vibration of the controller.
   (Countermeasure example)
   - Fix the USB memory stick with jigs not to fall off, etc.

5. **USB port on the front surface of the CPU circuit board (JANCD-YCP21)**
   The USB port on the front surface of the CPU circuit board (JANCD-YCP21) accepts only the USB memory stick. Do not connect a USB hub or other USB devices.

6. **Capacity of USB memory stick**
   The capacity of the memory stick must be 4Gbyte or less.
7.1.2.4 Inserting a USB Memory Stick in the Programming Pendant

When inserting a USB memory stick, take note of insertion direction.

With the USB memory stick face-up and the connector upwards, insert the stick slowly into the slot of the programming pendant of which display face-down.

Forcible insertion may result in damage to the USB memory stick or USB connector.

After inserting the stick, be sure to close the cover of the connector before starting operation.

Fig. 7-2: Using a USB Memory Stick

---

**NOTE**

When a USB memory stick is used, the waterproofing of programming pendant cannot be maintained.

If the USB memory stick is always set in the programming pendant, the stick may fall out of the pendant.

If it is impossible to maintain the waterproofing of programming pendant or to prevent the USB memory stick from falling out of the programming pendant, use a Compact Flash card instead.
7.1.2.5 Inserting a USB Memory Stick in the CPU Circuit Board (JANCD-YCP21)

Be careful about the inserting direction of the USB connector. The USB memory should be inserted slowly with the upper surface right. Forcible insertion may result in damage to the USB memory stick or USB connector.

* There are two USB connectors.

The left side is for USB1 and the right side is for USB2.
7.2 Handling Data

7.2.1 Data Classification

For the DX200, data that can be saved online are classified into six categories.

1. JOB
2. FILE/GENERAL DATA
3. PARAMETER*1
4. I/O DATA
5. SYSTEM DATA
6. SYSTEM BACKUP (CMOS.BIN)

Data saved on the external memory device can be loaded again into the DX200.

Each data in the six categories varies depending on applications or options.

When the device is set to “PC” or “FTP”, data cannot be handled other than “1. JOB” and “2. FILE/GENERAL DATA”.

Also, the “1. JOB” whose name consists of more than nine letters cannot be handled at “FC1(DX)”. 

*1: “PARAMETER BATCH” includes all “3. PARAMETER”.

NOTE

PARAMETER, SYSTEM DATA, I/O DATA, and SYSTEM BACKUP (CMOS.BIN), which includes the data of the former three data, have inherent information of each controller.

If those data are loaded by other controllers, unintended data overwriting, unexpected operation, or abnormal system startup may occur.

Do not load those backup data into other controllers.

If two controllers are loaded with the same job, paths of the two manipulators are different due to the home positions or mechanical error of the component parts.

Be sure to check the operation instruction before operation.

* OPN: Operation Mode, EDIT: Edit Mode, MAN: Management Mode
  O: Can be done, X: Cannot be done
7.2.2 File Existence

The following data categories show whether the same file name as a file that is going to be saved is in the external memory device or not.

- **JOB**
  No mark appears when the selected folder has the file of the same name.
  The asterisk (*) appears when the folder does not have the same name file.

- **FILE/GENERAL DATA, PARAMETER, SYSTEM DATA, I/O DATA**
  Black circle (●) appears when the selected folder has the file of the same name.
  White circle (○) appears when the folder does not have the same name file.

Whether the job after editing is saved or not can be judged by checking “TO SAVE TO FD” in the JOB HEADER window.

Fig. 7-3: Example of JOB

Fig. 7-4: Example of FILE/GENERAL DATA
7.2.2.1 Saving by Overwriting

"6. SYSTEM BACKUP (CMOS.BIN)" can be overwritten. As for "1. JOB", "2. FILE/GENERAL DATA", "3. PARAMETER", "4. I/O DATA" and "5. SYSTEM DATA", those data cannot be overwritten. Delete the target file in the device before the saving operation. If "CF: Programming pendant", "USB: Programming pendant", "USB1: Controller" or "USB2: Controller" is used as the device, the file does not need to be deleted because another folder can be created to save the data.
7 External Memory Devices
7.3 Operation Flow

The following description is the operation flow for external memory devices.

- **SELECT DEVICE**
  Select (EXTERNAL MEMORY DEVICE) → (DEVICE), and the destination device for saving.
  The device selected is valid after turning the power supply ON again.

- **SELECT FOLDER**
  Select (EXTERNAL MEMORY DEVICE) → (DEVICE), and the destination folder for saving.
  The folder selected is invalid after turning the power supply ON again.
  *1: (FOLDER) appears when using the “CF: Programming pendant”, “USB: Programming pendant”, “USB1: Controller” or “USB2: Controller” as a device.
  *2 The settings of (CREATE NEW FOLDER), (DELETE FOLDER), and (ROOT FOLDER) can be set.

- **SELECT SUB MENU**
  Select an operation to be performed from (LOAD), (SAVE), (VERIFY), and (DELETE).

- **SELECT DATA CATEGORY**
  Select the target data category.

- **SELECT DATA**
  Select the target data.
  "6.SYSTEM BACKUP (CMOS.BIN)" does not require this operation.
  *4 Individual selection, batch selection, marker (*) selection, and canceling selection can be performed.

- **EXECUTE**
  Select [ENTER] or (EXECUTE).
7.3.0.1 Operating a Folder

Folders can be used in order to classify and sort out the data such as jobs and condition files when using the “CF: Programming pendant”, “USB: Programming pendant”, “USB1: Controller” or “USB2: Controller”. The folders can be created in hierarchical structure positioning a root folder at the top.

Restrictions

Folder name: Up to 8 one-byte characters + 3 characters for extension

*Long folder names cannot be used such as the name that exceeds the restricted number of characters mentioned above as created in PC, etc.

Maximum path length: 42 one-byte characters

“ERROR 3360: INVALID FOLDER” appears when selecting the folder of which name exceeds the maximum path length.

Selecting a Folder

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {FOLDER}.
   – The FOLDER LIST window appears.
3. Move the cursor to a folder and press [SELECT].
   – A folder can be selected.
4. To move the hierarchy from a child folder to a parent folder, move the cursor to [..] and press [SELECT].

Creating a Folder

1. Change the security to management mode. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {FOLDER}.
   – The FOLDER LIST window appears.
7 External Memory Devices

7.3 Operation Flow

3. Move the cursor to a folder and press [SELECT].
   – Select the higher-level folder where a new folder to be created
     should be contained.
   – When creating a folder in top-level, this step is unnecessary.

4. Select {DATA} → {CREATE NEW FOLDER} under the pull-down
   menu. Input folder name using the keyboard on the screen and press
   [ENTER].
   – A folder is created.

Deleting a Folder

1. Change the security to management mode. Select {EXTERNAL
   MEMORY DEVICE} under {Main Menu}.

2. Select {FOLDER}.
   – The FOLDER LIST window appears.

3. Move the cursor to a folder and press [SELECT].
   – Select the higher-level folder where a folder to be deleted is
     contained.
   – When deleting a folder in top-level, this step is unnecessary.

4. Delete the files and subfolders beforehand inside the folder that is to
   be deleted.
   – A folder cannot be deleted if the folder contains files or subfolders
     inside.

Move the cursor to the folder to be deleted.

5. Select {DATA} → {DELETE FOLDER} under the pull-down menu.
7 External Memory Devices
7.3 Operation Flow

- **Initial Folder Setting**
  The folder that is contained in a deep hierarchy can be selected in a shortened operation.

  When selecting {LOAD}, {SAVE}, {VERIFY}, or {DELETE} from the sub menu of {EXTERNAL MEMORY DEVICE}, the folder that has been set as an initial folder becomes a current folder.

  1. Change the security to management mode. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
  2. Select {FOLDER}.
     - The FOLDER LIST window appears.
  3. Move the cursor to a folder and press [SELECT].
     - Select a folder that is to be set as a root folder.
  4. Select {DISPLAY} → {ROOT FOLDER} under the pull-down menu.
     - The INITIAL FOLDER SETTING window appears.
     - A folder currently selected appears in "CURRENT FOLDER" and the initial folder appears in "ROOT FOLDER".
5. Select {EDIT} → {SETUP FOLDER} under the pull-down menu. Move the cursor to “AUTO CHANGE” and press [SELECT].
   - The initial folder is set in “ROOT FOLDER”.
   - “AUTO CHANGE” shows “ON” and the initial folder setting becomes valid. Subsequently, every time {EXTERNAL MEMORY DEVICE} → {FOLDER} is selected, the initial folder that has been set becomes a current folder.

---

**SUPPLEMENT**

When the initial folder is missing due to exchange of the Compact Flash, etc., “ERROR 3360: INVALID FOLDER” appears when selecting {LOAD}, {SAVE}, {VERIFY}, {DELETE} or {FOLDER} menu from {EXTERNAL MEMORY DEVICE}, and simultaneously the initial folder becomes invalid. Set “ON” in “AUTO CHANGE” when the initial folder setting needs to be valid.
7.3.2 Saving Data

To download data from the memory of the DX200 to the external memory device, perform the following procedure.

**NOTE**

Data such as PARAMETER, SYSTEM DATA, I/O DATA, and the batch data such as PARAMETER BATCH, BATCH CMOS, ALL CMOS AREA, that include PARAMETER, SYSTEM DATA, I/O DATA, contain the information specific to each robot controller.

Those data are prepared as backup data for reloading into the controller used for saving.

Loading the data from other controller may result in destruction or loss of critical system information.

Take extra care for the saved data.

### Saving a Job

1. Select (EXTERNAL MEMORY DEVICE) under (Main Menu).
2. Select (SAVE).
   - The following window appears.

   ![External Memory Device Window](image1)

3. Select (JOB).
   - The JOB LIST window appears.

   ![Job List Window](image2)

   ![Job List Window](image3)
4. Select a job to be saved.
   – The selected job is marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select “YES”.
   – The selected job is saved.
7 External Memory Devices
7.3 Operation Flow

- Saving a Condition File or General Data

1. Select (EXTERNAL MOMERY DEVICE) under (Main Menu).
2. Select (SAVE).
   - The following window appears.

3. Move the cursor to (FILE/GENERAL DATA) and select.
   - The selection window appears.
   - The content of the display varies in accordance with applications and options.
7 External Memory Devices
7.3 Operation Flow

4. Select condition files or general data to be saved.
   – The selected files are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected files are saved.
7 External Memory Devices

7.3 Operation Flow

- **Saving a Parameter**

1. Select (EXTERNAL MEMORY DEVICE) under (Main Menu).
2. Select (SAVE).
   - The following window appears.

3. Move the cursor to (PARAMETER) and select.
   - The selection window for parameters appears.

4. Select parameters to be saved.
   - The selected parameters are marked with "★".
5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select “YES”.
   – The selected parameters are saved.
Saving I/O Data

1. Select (EXTERNAL MEMORY DEVICE) under (Main Menu).
2. Select (SAVE).
   - The following window appears.

3. Move the cursor to (I/O DATA) and select.
   - The selection window for I/O data appears.

4. Select I/O data to be saved.
   - The selected I/O data are marked with "★".

5. Press [ENTER].
   - The confirmation dialog box appears.

6. Select “YES”.
   - The selected I/O data are saved.
Saving System Data

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {SAVE}.
   – The following window appears.

3. Move the cursor to {SYSTEM DATA} and select.
   – The selection window for system data appears.
4. Select system data to be saved.
   – The selected system data are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select “YES”.
   – The selected system data are saved.

As for "JOB", "FILE/GENERAL DATA", "PARAMETER", "SYSTEM DATA", and "I/O DATA", the data cannot be overwritten. In this case, delete the file of the same name in the folder beforehand or create a new folder so that the data can be stored inside.
SYSTEM BACKUP (CMOS.BIN) Saving

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.

2. Select {SAVE}.
   – The following window appears.

3. Select {SYSTEM BACKUP(CMOS.BIN)}.
   – The confirmation dialog box appears.

4. Select "YES".
   – Saving operation of SYSTEM BACKUP(CMOS.BIN) starts in case CMOS.BIN does not exist where this data is saved.
   Or proceed to the following step (step 5) when CMOS.BIN is already equipped.
5. A confirmation dialog box to ask over-writing the data appears.

6. Select “YES”.
   − Saving of SYSTEM BACKUP (CMOS.BIN) starts.

   Saving of SYSTEM BACKUP (CMOS.BIN) cannot be performed while servo is turned ON, data is transmitted together with data modification, automatic backup, or when the media free space is less than 35MB.

   For about 2 seconds right after SYSTEM BACKUP (CMOS.BIN) saving is started, the hourglass icon appears at the center of the window and all the operations become invalid. Operations become valid when the hourglass disappeared.

   Do not turn OFF the power supply because SYSTEM BACKUP (CMOS.BIN) is being saved in the saving device while the hourglass is appeared in the status area.
7.3.0.3 Loading Data

To upload data from the external memory device to the memory of the DX200, follow the procedure in the following.

**NOTE**

PARAMETER, SYSTEM DATA, I/O DATA, and SYSTEM BACKUP (CMOS.BIN), which includes the data of the former three data, have inherent information of each controller.

If those data are loaded by other controllers, unintended data overwriting, unexpected operation, or abnormal system startup may occur.

Do not load those backup data into other controllers.

If two controllers are loaded with the same job, paths of the two manipulators are different due to the home positions or mechanical error of the component parts.

Be sure to check the operation instruction before operation.

Take extra care for the saved data.

When the ladder program used in the DX200 is tried to be loaded, the confirmation dialog "DX200 CIOPRG DOWNLOAD?" is displayed. Select "YES" to load the ladder program of the DX200. If [CANCEL] is pressed or "NO" is selected while this dialog is displayed, the ladder program will not be loaded.

When the ladder program used in the DX200 is loaded to the DX200, make sure to confirm that the APPLI of the program in the DX200 system and the DX200 system to which the program is loaded are the same. Do not load the ladder program which has a different APPLI. The "different APPLI" also means the case that the number of APPLIs are different (ex. "Arc" and "Arc + Arc").

If the ladder program used in DX200 arc is loaded to DX200, some new functions added in DX200 cannot be used (only for arc welding purpose). In order to use the new functions added in DX200, reflect the content edited in DX200 to the DX200 ladder program without loading the ladder program of DX200.
### Loading a Job

1. Select **{EXTERNAL MEMORY DEVICE}** under **{Main Menu}**.
2. Select **{LOAD}**.
   - The following window appears.

3. Select **{JOB}**.
   - The job selection window appears.
7 External Memory Devices
7.3 Operation Flow

4. Select a job to be loaded.
   – The selected jobs are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected jobs are loaded.
Loading a Condition File/General Data

1. Select (EXTERNAL MEMORY DEVICE) under (Main Menu).
2. Select (LOAD).
   - The following window appears.

3. Move the cursor to (FILE/GENERAL DATA) and select.
   - The selection window for condition file or general data appears.

4. Select a condition file or general data to be loaded.
   - The selected files are marked with “*”.
5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected files are loaded.

### Loading a Parameter

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {LOAD}.
   – The following window appears.

3. Move the cursor to {PARAMETER} and select.
   – The selection window for parameters appears.
4. Select parameters to be loaded.
   – The selected parameters are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected parameters are loaded.
7. External Memory Devices
7.3 Operation Flow

### Loading I/O Data

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {LOAD}.
   - The following window appears.

   ![External Memory Device Window](image)

3. Move the cursor to {I/O DATA} and select.
   - The selection window for I/O data appears.

   ![Selection Window](image)

4. Select I/O data to be loaded.
   - The selected I/O data are marked with “★”.

   ![Selected Data](image)

5. Press [ENTER].
   - The confirmation dialog box appears.

   ![Confirmation Dialog](image)

6. Select “YES”.
   - The selected I/O data are loaded.
7 External Memory Devices

7.3 Operation Flow

- **Loading System Data**

1. Select \{EXTERNAL MEMORY DEVICE\} under \{Main Menu\}.
2. Select \{LOAD\}.
   - The following window appears.

3. Move the cursor to \{SYSTEM DATA\} and select.
   - The selection window for system data appears.

4. Select system data to be loaded.
   - The selected system data are marked with "★".
5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select “YES”.
   – The selected system data are loaded.
7.3.0.4 Verifying Data

Follow the procedure below to verify data in the memory of the DX200 with data saved in the external memory device.

**NOTE**

"SYSTEM BACKUP (CMOS.BIN)" cannot be verified.

**Verifying a Job**

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {VERIFY}.
   - The following window appears.

3. Select {JOB}.
   - The job selection window appears.
7.3 Operation Flow

4. Select a job to be verified.
   – The selected jobs are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected jobs are verified.
7 External Memory Devices
7.3 Operation Flow

- **Verifying a File**

1. Select (EXTERNAL MEMORY DEVICE) under (Main Menu).
2. Select (VERIFY).
   - The following window appears.

3. Select the group of the file to be verified.
4. Select a file to be verified.
   - The selected files are marked with “★”.

5. Press [ENTER].
   - The confirmation dialog box appears.

6. Select “YES”.
   - The selected files are verified.
7 External Memory Devices

7.3 Operation Flow

7.3.0.5 Deleting Data

Follow the procedure below to delete a file or files on an external memory device.

**Deleting a Job**

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {DELETE}.
   – The following window appears.

3. Select {JOB}.
   – The job selection window appears.

4. Select a job to be deleted.
   – The selected jobs are marked with "★".

5. Press [ENTER].
   – The confirmation dialog box appears.

6. Select "YES".
   – The selected jobs are deleted.
7 External Memory Devices
7.3 Operation Flow

Deleting a File
(Condition file/General data, Parameter, System data and I/O data)

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {DELETE}.
   – The following window appears.

   ![Image of the window]

3. Select the group of the file to be deleted.

   ![Image of the window showing file groups]

4. Select a file to be deleted.
   – The selected files are marked with "★".

   ![Image of the window with selected files]

5. Press [ENTER].
   – The confirmation dialog box appears.

   ![Image of the confirmation dialog box]

6. Select “YES”.
   – The selected files are deleted.
Deleting SYSTEM BACKUP (CMOS.BIN)

1. Select {EXTERNAL MEMORY DEVICE} under {Main Menu}.
2. Select {DELETE}.
   - The following window appears.

3. Select {SYSTEM BACKUP (CMOS.BIN)}.
   - A confirmation dialog box appears when CMOS.BIN exists in the saving device. And it won’t appear when CMOS.BIN does not exist.

4. Select “YES”.
   - Deleting of SYSTEM BACKUP (CMOS.BIN) starts.

**NOTE**
Deleting of SYSTEM BACKUP (CMOS.BIN) is not executed while a data is transmitted together with data modification.
7 External Memory Devices
7.3 Operation Flow

7.3.0.6 Job Selection Mode

The method of selecting a job and various data files when loading, saving, verifying, and deleting are described in the following:

- **Individual Selection**
  Jobs and data files are selected individually one at a time.

- **Batch Selection**
  Jobs and data files are selected all at one time.

- **Marker (*) Selection**
  Loading: selects the files in the external memory device.
  Saving: selects the files in the memory of the DX200.
  Verifying: selects both the files in the external memory device and in the memory of the DX200.

### Using Individual Selection

1. In either the external memory JOB LIST window or the file selection window, move the cursor to a job or a file to be selected.

   ![Job Selection Window](image)

   - Press [SELECT].
   - Move the cursor to a file needed and press [SELECT] again.
   - To cancel the selected items, select {EDIT} and then {CANCEL SELECT}.
   - The selected jobs are marked with “*”.

   ![Selected Jobs](image)
7 External Memory Devices
7.3 Operation Flow

Using Batch Selection

1. In either the external memory JOB LIST window or the file selection window, select {EDIT} under the menu.
   - The pull-down menu appears.

2. Select {SELECT ALL}.
   *To cancel the selected items, select {EDIT} and then {CANCEL SELECT}.
   - All jobs are selected.
### Using Marker (*) Selection

1. In either the external memory JOB LIST window or the file selection window, select (EDIT) under the menu.
   - The pull-down menu appears.

   ![Menu Screen](image)

2. Select (SELECT MARKER (*)).
   *To cancel the selected items, select (EDIT) and then (CANCEL SELECT).*

   ![Marker Selection Screen](image)
8 Parameter

8.1 Parameter Configuration

The parameters of DX200 can be classified into the following seven:

Motion Speed Setting Parameter
Determines the manipulator motion speed for jog operation at teaching, test operation, or playback operation.

Mode Operation Setting Parameter
Makes the setting for various operations in the teach mode or remote mode.

Parameter according to Interference Area
Limits the P-point maximum envelope of the manipulator or sets the interference area for axis interference or cubic interference.

Parameter according to Status I/O
Sets the parity check or I/O setting for user input/output signals.

Parameter according to Coordinated or Synchronized Operation
Makes the settings for coordinated or synchronized operations between manipulators or between manipulators and stations.

Parameter for Other Functions or Applications
Makes the settings for other functions or applications.

Hardware Control Parameter
Makes the hardware settings for fan alarm or relay operation, etc.

S1CxG Parameters
The initial setting of S1CxG parameters depends on the manipulator model.
For a system in which two manipulators are controlled, the following two types of parameters are used: S1C1G type and S1C2G type.
8 Parameter
8.2 Motion Speed Setting Parameters

8.2 Motion Speed Setting Parameters
These parameters set the manipulator motion speed for jog operation at teaching, test operation, or playback operation.

8.2.0.1 S1CxG000: IN-GUARD SAFE OPERATION MAX. SPEED
Units: 0.01%
The upper speed limit is set for in-guard safe operation. While the in-guard safe operation command signal is being input, the TCP speed is limited to the TCPmax speed.

8.2.0.2 S1CxG001: DRY-RUN SPEED
Units: 0.01%
This is a dry-run operation speed setting value used when checking the path. Take safety into consideration when setting changes are unnecessary.

8.2.0.3 S1CxG002 to S1CxG009: JOINT SPEED FOR REGISTRATION
Units: 0.01%
The value set in these parameters is registered as the joint speed for each speed level when teaching the position data with the programming pendant. The percentage corresponding to the set value at each level is registered as 100% of the value set in the playback speed limit. Values greater than those set as speed limit values cannot be set.

S1CxG002: Level 1
S1CxG003: Level 2
·
·
S1CxG009: Level 8
8 Parameter
8.2 Motion Speed Setting Parameters

8.2.0.4 S1CxG010 to S1CxG017: LINEAR SPEED FOR REGISTRATION
Units: 0.1mm/s
The value set in these parameters is registered as the linear speed for each speed level when teaching the position data with the programming pendant. Values greater than those set as playback speed limit values cannot be set.

S1CxG010: Level 1
S1CxG011: Level 2
·
·
S1CxG017: Level 8

8.2.0.5 S1CxG018 to S1CxG025: POSITION ANGLE SPEED
Units: 0.1°/s
The value set in these parameters is registered as the position angle speed for each speed level when teaching the position data with the programming pendant. Values greater than those set as playback speed limit cannot be set.

S1CxG018: Level 1
S1CxG019: Level 2
·
·
S1CxG025: Level 8

8.2.0.6 S1CxG026 to S1CxG029: JOG OPERATION ABSOLUTE VALUE SPEED
Units: 0.1mm/s
These are setting values of jog operation speed set by the programming pendant. Values greater than those set as jog operation speed limit value cannot be set.

S1CxG026 Low level: Jog operation speed when “LOW” manual speed is specified.
S1CxG027 Medium level: Jog operation speed when “MEDIUM” manual speed is specified.
S1CxG028 High level: Jog operation speed when “HIGH” manual speed is specified.
S1CxG029 High-speed-level: Jog operation speed when [HIGH SPEED] is pressed.
8.2 Motion Speed Setting Parameters

8.2.0.7 S1CxG030 to S1CxG032: INCHING MOVE AMOUNT

These parameters specify the amount per move at inching operation by the programming pendant. The referenced parameter differs according to the operation mode at inching operation.

- S1CxG030 : Joint Operation (Unit: 1 pulse)
- S1CxG031 : Cartesian/cylindrical (Unit: 0.001 mm)
- S1CxG032 : Motion about TCP (Unit: 0.0001 degree)

> If the value set for S1CxG031 or S1CxG032 is too small, the inching operation does not proceed.

> Note that the units of S1CxG031 and S1CxG032 are smaller than those for the NX100.

8.2.0.8 S1CxG033 to S1CxG040: POSITIONING ZONE

This parameter value will be referenced when positioning is specified with the “MOVE” instruction: MOVJ (joint movement) or MOVL (linear movement).

<Example> MOVL V=100.0 PL=1

<Example> MOVL V=100.0 PL=1

Positioning level

Positioning specification

The value set in this parameter specifies the range to enter in relation to the teaching point for that step positioning. After entering the specified positioning zone, the manipulator starts moving to the next step. The system is also set up so inward turning operation is carried out in the moving section when moving to the next path; speed changeover is smooth.

- S1CxG033: Positioning level 1
- S1CxG034: Positioning level 2
- S1CxG040: Positioning level 8
8 Parameter
8.2 Motion Speed Setting Parameters

Since operation will be turning inward during playback, as shown in the following diagram, use setting values taking safety aspects into consideration.

![Diagram of motion speed setting parameters]

NOTE
This process becomes effective when change in direction of steps is between 25° and 155°.

Position Level
Position levels are divided into nine stages of 0 to 8 with the "MOV" instruction.

- Example: MOVL V=500 PL=1 (PL: Position Level)
- The functions at each level are as follows:
  - 0: Complete positioning to the target point
  - 1 to 8: Inward turning operation

Following are explanations of the respective processing details and their relations with the parameter.

- **Level 0**
  - Determines positioning completion when the amount of deviation (number of pulses) to the target point of each axis comes within the position set zone specified by the parameter.
  - After the positioning completes, the instruction system starts instruction to the next target point.

- **Level 1 to 8**
  - Recognizes virtual positioning before the target point. The distance of the virtual target position from the target point is specified at the positioning level.
  - Distance data corresponding to each level are set in the parameter. Determination of the virtual target position is carried out in the instruction system.
  - Set zone: The zone of each positioning level set in the parameter. (μm)
8 Parameter
8.2 Motion Speed Setting Parameters

8.2.0.9 S1CxG044: LOW-SPEED START

   Units: 0.01%
   This parameter specifies max. speed at low speed start. Specify the
   starting method for “initial operation speed of manipulator” (S2C217).

8.2.0.10 S1CxG045 to S1CxG048: JOG OPERATION LINK SPEED

   Units: 0.01%
   These parameters prescribe the link speed at jog operation by the
   programming pendant. Specify the percentage (%) for the jog operation
   speed limit, the joint max. speed.
   S1CxG045: Jog operation link speed at level "LOW"
   S1CxG046: Jog operation link speed at level "MEDIUM"
   S1CxG047: Jog operation link speed at level "HIGH"
   S1CxG048: Jog operation link speed at level "HIGH SPEED"

8.2.0.11 S1CxG056: WORK HOME POSITION RETURN SPEED

   Units: 0.01%
   This parameter specifies the speed for returning to work home position
   against the maximum speed.

8.2.0.12 S1CxG057: SEARCH MAX. SPEED

   Units: 0.1mm/s
   This parameter specifies the max. speed for searching.

8.2.0.13 S2C201: POSTURE CONTROL AT CARTESIAN OPERATION OF JOG

   This parameter specifies whether or not posture control is performed at
   cartesian operation of “JOG” by the programming pendant. Use posture
   control unless a special manipulator model is used.
   0 : With posture control
   1 : Without posture control

8.2.0.14 S2C202: OPERATION IN USER COORDINATE SYSTEM (WHEN EXTERNAL
   REFERENCE POINT CONTROL FUNCTION USED)

   This parameter specifies the TCP or reference point of motion about TCP
   when the external reference point control function is used and the user
   coordinate system is selected by the programming pendant.

   Fig. 8-1: 0: When manipulator TCP is selected
8 Parameter
8.2 Motion Speed Setting Parameters

Fig. 8-2: 1: When external reference point is selected

8.2.0.15 S2C320: CONTROLLED GROUP JOB TEACHING POSITION CHANGE

This parameter is used to change only the job teaching position of controlled group axis.

0 : Not changed
1 : Changed

8.2.0.16 S2C422: OPERATION AFTER RESET FROM PATH DEVIATION

8.2.0.17 S2C423: OPERATION AFTER JOB

These parameters specify the method of restarting the manipulator that has deviated from the normal path such as an emergency stop or jog operation.

0 : Move to the indicated step (initial setting).
1 : After moving back to the deviated position, move to the indicated step.
2 : Move back to the deviated position and stop.

Table 8-1: S2C422

<table>
<thead>
<tr>

<td>Emergency stop (Servo OFF)</td>
</tr>
<tr>
<td></td>
<td>Move back to the deviated position and stop. When restarting, move to the indicated step.</td>
</tr>
</tbody>
</table>

**NOTE**

- To the path deviated position, the manipulator moves in a straight line at low speed operation (SICxG044). It is linear movement. After resetting from deviation, the speed becomes the same as taught speed.
- The initial setting (prior to shipping) is 0: The manipulator moves in a straight line from the present position to the indicated step.

8.2.0.18 S2C424: DEVIATED POSITION

This parameter specifies whether deviated position is to be robot current (reference) position or feedback position.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Return to the feedback position.</td>

</tbody>
</table>
8 Parameter
8.2 Motion Speed Setting Parameters

When emergency stop is applied during high-speed motion, the deviated position differs from the robot current value (reference) position and feedback position as shown in the following.

![Diagram showing emergency stop and its effects on position]

8.2.0.19 S2C425: CIRCULAR INTERPOLATION TOOL POSITION CONTROL

This parameter selects tool position control methods at circular interpolation operation.

0: Fixed angle position
   Interpolation is performed depending on the position change viewed from the base coordinate.
   As the figure below (left) shows, when tool position viewed from outside is not significantly changed and that position is mainly taught at teaching, this setting is required.

1: Rotating position by circular arc path
   Interpolation is performed depending on the position change corresponding to circular arc path.
   As the figure below (right) shows, when tool position corresponding to circular arc path (tool position viewed from the center of the circular arc) is not significantly changed, and that position is mainly taught at teaching, this setting is required.

![Diagram illustrating fixed angle and circular arc position]

8.2.0.20 S2C653: EMERGENCY STOP CURSOR ADVANCE CONTROL FUNCTION

This parameter specifies whether to use the cursor advance control function or not.

0: Not use
1: Use
8.2.0.21 S2C654: EMERGENCY STOP CURSOR ADVANCE CONTROL FUNCTION CONT PROCESS COMPLETION POSITION

Units: %

When the manipulator stops during moving inner corner by CONT process, this parameter specifies which position of the inner corner should be considered as the end of step.

8.2.0.22 S2C655: EMERGENCY STOP ADVANCE CONTROL FUNCTION WORK START INSTRUCTION STEP MOTION COMPLETION DELAY TIME

Units: ms

In order to recognize securely the completion of motion to the step of work start instruction (such as ARCON instruction), this parameter specifies the delay time for motion completion of the work start instruction step only.

8.2.0.23 S2C698: BASE AXIS OPERATION KEY ALLOCATION SETTING

8.2.0.24 S3C1098 to S3C1102: POSITION CORRECTING FUNCTION DURING PLAYBACK

These parameters specify the necessary data for position correcting function (PAM) during playback operation.

- **S3C1098** Specifies the limit of position correcting range (Units: μm)
- **S3C1099** Specifies the limit of speed correcting range (Units: 0.01%)
- **S3C1100** Specifies the correcting coordinates
  0: Base
  1: Robot
  2: Tool
  3: User 1
to
  26: User 24
- **S3C1102** Specifies the limit of posture angle adjustment range (Units: 0.01°)
8.3 Mode Operation Setting Parameters

These parameters set various operations in the teach mode or remote mode. Some parameters can be set through (SETUP) → (TEACHING COND) or (OPERATE COND).

8.3.0.1 S2C195: SECURITY MODE WHEN CONTROL POWER SUPPLY IS TURNED ON
The operation level when the control power supply is turned ON is set.

<table>
<thead>
<tr>
<th>Setting</th>

<td>MOVL, DOUT, TIMER, DOUT, MOVL, Stops at move instruction</td>
</tr>
</tbody>
</table>
8 Parameter
8.3 Mode Operation Setting Parameters

8.3.0.5 S2C199: INSTRUCTION (EXCEPT FOR MOVE) EXECUTION AT “FORWARD” OPERATION

This parameter specifies the method of instruction (except for move) execution at “FORWARD” operation by the programming pendant.

0 : Executed by pressing [FWD] + [INTERLOCK]
1 : Executed by pressing [FWD] only
2 : Instruction not executed

8.3.0.6 S2C203: CHANGING STEP ONLY

This parameter specifies whether to permit only step changes in an editing-prohibited job. When permitted, only position data can be changed but additional data such as speed cannot be changed. This specification can be done on the TEACHING CONDITION window.

0 : Permitted
1 : Prohibited

8.3.0.7 S2C204: MANUAL SPEED STORING FOR EACH COORDINATE

This parameter specifies whether to assign different manual speeds for the joint coordinates and other coordinates. If “NOT STORED” is selected, manual speed is not affected by changing the coordinates. If “STORED” is selected, manual speeds can be selected separately for the joint coordinates and other coordinates.

0 : Not stored
1 : Stored

8.3.0.8 S2C206: ADDITIONAL STEP POSITION

This parameter designates either “before next step” or “after the cursor position (between instructions)” as additional step position. This specification can be done on the TEACHING CONDITION window.

**Fig. 8-3: <Example>**

<table>
<thead>
<tr>

</tbody>
</table>

Added step
8.3.0.9 S2C207: MASTER JOB CHANGING OPERATION

This parameter specifies whether to permit or prohibit master job changing operation. If "PROHIBIT" is specified, the master job cannot be changed (or registered) easily. The specification can be done on the OPERATING CONDITION window.

0 : Permitted
1 : Prohibited

8.3.0.10 S2C208: CHECK AND MACHINE-LOCK KEY OPERATION IN PLAY MODE

This parameter specifies whether to permit or prohibit in play mode to change the operation that changes the operation condition. Even if an error occurs because of the operation with the keys, the manipulator does not stop. The specification can be done on the OPERATING CONDITION window.

0 : Permitted
1 : Prohibited

8.3.0.11 S2C209: RESERVED WORK JOB CHANGING OPERATION

This parameter specifies whether to permit reserved work job changing operation.

The designation can be done on the OPERATING CONDITION window.

0 : Permitted
1 : Prohibited

8.3.0.12 S2C210: MASTER OR SUBMASTER CALL OPERATION IN PLAY MODE

This parameter specifies whether the master or submaster call operation in play mode is permitted or not. When the independent control function is valid, the master job for sub-task is specified at the same time. The specification can be done on the OPERATING CONDITION window.

0 : Permitted
1 : Prohibited
8.3.0.13 S2C211: LANGUAGE LEVEL

This parameter specifies the level of the robot language (INFORM III). The levels simplify the instruction registering operation. With the DX200, all robot instructions can be executed regardless of specification of instruction sets. The specification can be done on the TEACHING CONDITION window.

0: Contracted Level
Only frequently used robot instructions are selected to reduce the number of instructions to be registered. Robot instructions displayed on the instruction dialog box are also reduced so that specification is simplified.

1: Standard Level
2: Expanded Level
All the robot instructions are available in standard and expanded levels. The two levels are distinguished by the number of additional information items (tags) that can be used with robot instructions. At the expanded level, the flowing functions are available.

- Local Variables and Array Variables
- Use of Variables for Tags (Example: MOVJ VJ=I000)
  The above functions are not available at the standard level, however, which reduces the number of data required to register instructions, thereby simplifying the operation.

8.3.0.14 S2C214: INSTRUCTION INPUT LEARNING FUNCTION

This parameter specifies whether to set a line of instructions that has been input on the input buffer line when pressing the first soft key for each instruction. If “PROVIDED” is selected, the instructions are set.

0 : Without learning function
1 : With learning function

8.3.0.15 S2C215: ADDRESS SETTING WHEN CONTROL POWER IS TURNED ON

This parameter specifies the processing of the job name, step No., and line No. that are set when the control power supply is turned ON.

0 : Reproduces the address when power supply is turned ON.
1 : Lead address (Line“0”) of the master job.

8.3.0.16 S2C216: JOB LIST DISPLAY METHOD AT JOB SELECTION

These parameters specify the displaying method on the JOB LIST window at job selection.

0 : Order of Names
1 : Order of Date
8.3.0.17  S2C217: INITIAL OPERATION OF MANIPULATOR

This parameter specifies the operation speed level of the first section when starting. Specify the operation speed with the low-speed start (S1CxG044). When starting at low-speed, the manipulator stops after reaching the indicated step regardless of the cycle setting. Once the manipulator is paused during the low-speed operation, it moves at teaching speed when restarted.

0 : Specified on the SPECIAL PLAY window. Operates at low speed only when low speed start is set. Operates at taught speed when not instructed.
1 : Starts at low speed after editing regardless of soft key instructions.

8.3.0.18  S2C218: PLAYBACK EXECUTION AT CYCLE MODE “1- STEP”

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Operation Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>MOVL, DOUT, TIMER, MOVL</td>
</tr>
<tr>
<td></td>
<td>Stops at every instruction</td>
</tr>
<tr>
<td>1</td>
<td>MOVL, DOUT, TIMER, MOVL</td>
</tr>
<tr>
<td></td>
<td>Stops at move instruction</td>
</tr>
</tbody>
</table>

NOTE
When operating “FORWARD” by the programming pendant, the units for execution are set in another parameter (S2C198).

8.3.0.19  S2C219: EXTERNAL START

This parameter specifies whether a start instruction from external input is accepted or not. The specification can be done on the OPERATING CONDITION window.

0 : Permitted
1 : Prohibited

8.3.0.20  S2C220: PROGRAMMING PENDANT START

This parameter specifies whether a start instruction from the programming pendant is accepted or not.

The specification can be done on the OPERATE ENABLE SETTING window.

0 : Permitted
1 : Prohibited
8.3.0.21 S2C221: SPEED DATA INPUT FORM

This parameter specifies the units for speed data input and display.

- mm/s : in units of 0.1 mm/s
- cm/min : in units of 1 cm/min
- inch/min : in units of 1 inch/min
- mm/min : in units of 1 mm/min

The specification can be done on the OPERATE ENABLE SETTING window.

0 : mm/sec
1 : cm/min
2 : inch/min
3 : mm/min

8.3.0.22 S2C222: RESERVED START

This parameter specifies whether a reserved start instruction from the programming pendant is accepted or not.

The specification can be done on the FUNCTION ENABLE SETTING window.

0 : Permitted
1 : Prohibited

8.3.0.23 S2C224: JOB SELECTION AT REMOTE FUNCTION (PLAY MODE)

This parameter specifies whether a job selection in play mode at remote function is prohibited or not.

The specification can be done on the FUNCTION ENABLE SETTING window.

0 : Permitted
1 : Prohibited

8.3.0.24 S2C225: EXTERNAL MODE SWITCH

This parameter specifies whether mode switching from the outside is accepted or not.

The specification can be done on the OPERATE ENABLE SETTING window.

0 : Permitted
1 : Prohibited

8.3.0.25 S2C227: EXTERNAL CYCLE SWITCHING

This parameter specifies whether cycle switching from the outside is accepted or not.

The specification can be done on the OPERATE ENABLE SETTING window.

0 : Permitted
1 : Prohibited
8.3.0.26 S2C228: PROGRAMMING PENDANT CYCLE SWITCHING

This parameter specifies whether cycle switching from the programming pendant is accepted or not.
The specification can be done on the OPERATE ENABLE SETTING window.

0 : Permitted
1 : Prohibited

8.3.0.27 S2C229: SERVO ON FROM EXTERNAL PP PROHIBITION

This parameter specifies whether a servo ON instruction is accepted or not. More than one instruction can be specified. For example, to permit the servo ON instruction from an external input only, set “2”. In this case, servo ON instruction from the programming pendant is not accepted.
The specification can be done on the OPERATE ENABLE SETTING window.

8.3.0.28 S2C230: PROGRAMMING PENDANT OPERATION WHEN “IO” IS SELECTED FOR REMOTE MODE

This parameter specifies whether each operation of the following is valid when “IO” is selected for remote function selection. IO and command are available for remote function selection: “IO” is set prior to shipping. “Command” is valid when transmission function (optional) is specified.
8.3.0.29 S2C234: STEP REGISTRATION AT TOOL NO. CHANGE

The registration of the step when the tool number is changed allows the setting to be made as prohibited.

If this parameter is set to “1” (prohibited), the following operations are prohibited.

- Modification of a step  
  When the tool number of the teaching step differs from the currently-selected tool number, the step cannot be modified.

- Deletion of a step  
  Even if the teaching step position coincides with the current position, the step cannot be deleted when the tool number of the teaching step differs from the currently-selected tool number.

- Addition of a step  
  When the tool number of the teaching step indicated by the cursor differs from the currently-selected tool number, the step cannot be added.

8.3.0.30 S2C293: REMOTE FIRST CYCLE MODE

This parameter sets the cycle that changes from the local mode to the remote mode.

The specification can be done on the OPERATE CONDITION SETTING window.

- 0 : Step  
- 1 : 1 cycle  
- 2 : Continuous  
- 3 : Not specified

8.3.0.31 S2C294: LOCAL FIRST CYCLE MODE

This parameter sets the cycle that changes from the remote mode to the local mode.

The specification can be done on the OPERATE CONDITION SETTING window.

- 0 : Step  
- 1 : 1 cycle  
- 2 : Continuous  
- 3 : Not specified
8.3 Mode Operation Setting Parameters

8.3.0.32 S2C312: POWER ON FIRST CYCLE MODE
This parameter sets the first cycle mode for when the power is turned ON. The specification can be done on the OPERATE CONDITION SETTING window.

- 0: Step
- 1: 1 cycle
- 2: Continuous
- 3: Not specified

8.3.0.33 S2C313: TEACH MODE FIRST CYCLE MODE
This parameter sets the cycle that changes from the play mode to the teach mode. The specification can be done on the OPERATE CONDITION SETTING window.

- 0: Step
- 1: 1 cycle
- 2: Continuous
- 3: Not specified

8.3.0.34 S2C314: PLAY MODE FIRST CYCLE MODE
This parameter sets the cycle that changes from the teach mode to the play mode. The specification can be done on the OPERATE CONDITION SETTING window.

- 0: Step
- 1: 1 cycle
- 2: Continuous
- 3: Not specified

8.3.0.35 S2C316: START CONDITION AFTER ALARM-4107 (“OUT OF RANGE (ABSO DATA)”) This parameter specifies the activating method after the alarm 4107 (“OUT OF RANGE (ABSO DATA)”) occurs. The specification can be done on the PLAYBACK CONDITION SETTING window.

- 0: Position check operation required
- 1: Low-speed start up
8 Parameter
8.3 Mode Operation Setting Parameters

8.3.0.36 S2C395: SIGNAL NAME ALIAS FUNCTION

On the JOB CONTENT window, the name registered to the user input/output signal number can be displayed as alias instead of the signal number itself.

Table 8-4: S2C395

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Valid/Invalid</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Function invalid</td>
</tr>
<tr>
<td>1</td>
<td>Function valid</td>
</tr>
</tbody>
</table>

1. With this function valid, the confirmation dialog box “Register by name (alias)?” is displayed when a signal (IN#, OT#, IG#, OG#, IGH#, OGH#) is selected on the DETAIL EDIT window.

2. Select “YES” and the signal select window appears. Then select the target signal of number and press [ENTER], and the registered name is displayed instead of the signal number. However, if the signal number’s name is not yet registered, it is displayed by number as usual.

<Example> Registration of the name of user output OUT#0001 as “OUTPUT 1”

In the case of DOUT instruction:

S2C395=0 : DOUT OT#(1) ON
S2C395=1 : DOUT OT#(OUTPUT 1) ON

Select {IN/OUT} → {UNIVERSAL INPUT/OUTPUT} to edit signal names on the window. Up to 16 characters can be entered as a signal name. However, when this function is valid, if the content below is entered, the error message shows and the name cannot be registered.

• The name already registered
• Letters beginning with a number
• Letters including the signs below:
  ( , ) , [ , ] , = , < , > , space, comma
• Letters beginning with “alphabets representing variables” + “number”

<Example> B0..., I0..., BP1..., LEX2...

When the name begins with “ ’ ”, it is regarded as a comment and the same comment can be registered for two or more signals. In this case, although this function is valid, the number is displayed on the JOB CONTENT window instead of the name.

<Example> Registration of the name of user output OUT#0002 as “ ‘OUTPUT 2”

S2C395=0 : DOUT OT#(2) ON
S2C395=1 : DOUT OT#(2) ON
8 Parameter
8.3 Mode Operation Setting Parameters

8.3.0.37 S2C396: VARIABLE NAME ALIAS FUNCTION

On the JOB CONTENT window, the name registered to the variable (including local variables) can be displayed as alias instead of the variable number.

Table 8-5: S2C396

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Valid/Invalid</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Function invalid</td>
</tr>
<tr>
<td>1</td>
<td>Function valid</td>
</tr>
</tbody>
</table>

1. With this function valid, the confirmation dialog box “Register by name (alias) ?” is displayed when you select the variable on the DETAIL EDIT window.

2. Select “YES” and the variable select window appears. Then select the target variable of number and press [ENTER], and the registered name is displayed instead of the variable number. However, if the variable number’s name is not yet registered, it is displayed by number as usual.

<Example> Registration of the byte type variable B000 as “WORK KIND”
In the case of SET instruction
S2C396=0 : SET B000 128
S2C396=1 : SET WORK KIND 128

Select {VARIABLE} from the menu to select each variable and edit the variable name. Up to 16 characters can be entered as a variable name. However, when this function is valid, if the content below is entered, the error message shows and the name cannot be registered.

• The name already registered
• Letters beginning with a number
• Letters including the signs below: (, ), [ ], =, <, >, space, comma
• Letters beginning with “alphabets representing variables” + “number”

<Example> B0..., I0..., BP1..., LEX2...

When the name begins with “ ’ ”, it is regarded as a comment and the same comment can be registered for two or more variables. In this case, although this function is valid, the number is displayed on the JOB CONTENT window instead of the name.

<Example> Registration of the byte type variable B001 as “WORKNUM”
S2C396=0 : SET B001 10
S2C396=1 : SET B001 10
This function enables registration of any particular input/output signal/variable. Reference and editing of signals/variables are possible on the same window.

Table 8-6: S2C397

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Valid/Invalid</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Function Invalid</td>
</tr>
<tr>
<td>1</td>
<td>Function Valid</td>
</tr>
</tbody>
</table>

With this function valid, the sub-menu {I/O-VARIABLE CUSTOMIZE} opens under {Main Menu} {ARC WELDING}, {SPOT WELDING}, {GENERAL}, {HANDLING} (differs by application). Select {I/O-VARIABLE CUSTOMIZE}, and the I/O-VARIABLE CUSTOMIZE window appears as follows.

Table 8-7: Registrable Items on the I/O-VARIABLE CUSTOMIZE Window

<table>
<thead>
<tr>
<th>Input/Output Signals</th>
<th>USER INPUT SIGNAL</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>USER OUTPUT SIGNAL</td>
</tr>
<tr>
<td></td>
<td>PSEUDO INPUT SIGNAL</td>
</tr>
<tr>
<td>Variables</td>
<td>BYTE TYPE VARIABLE (B VARIABLE)</td>
</tr>
<tr>
<td></td>
<td>INTEGER TYPE VARIABLE (I VARIABLE)</td>
</tr>
<tr>
<td></td>
<td>DOUBLE-PRECISION INTEGER TYPE VARIABLE (D VARIABLE)</td>
</tr>
</tbody>
</table>

The contents and names of the registered signals/variables can be checked and edited on this window. In addition, the data list of registered signals/variables can be loaded, saved, verified or deleted with an external memory unit. Only when this function is valid, “I/O-VARIABLE CUSTOMIZE (file name: USRIOVAR.DAT)” is displayed and can be selected. To display the “I/O-VARIABLE CUSTOMIZE (file name: USRIOVAR.DAT)”, select {EX.MEMORY} → {LOAD} → {SAVE} → {VERIFY} → {DELETE} → {SYSTEM DATA}.
8.3.0.39 S2C410: WORD REGISTRATION FUNCTION / WORD EDITING FUNCTION
SPECIFICATION
Specifies the valid or invalid to edit the words while inputting the
characters.

0 : Invalid
1 : Valid

Note: It is able to edit the words when the security mode is the edit mode
or the management mode.

8.3.0.40 S2C413: JOB UNDELETE FUNCTION
This function doesn’t completely delete a job from its memory when
deleting the job, but saves the data so that the job can be restored as
needed.

This parameter can be set on (TEACHING CONDITION) window.
If a job is deleted while this function is valid, the job disappears from the
JOB LIST window. In this case, {TRASH JOB LIST} is newly displayed to
{JOB} on {Main Menu} and the deleted job is listed on it.

The job will not be listed on the trash job list and will not be
restored if it is deleted when this function is invalid.
On the trash job list, the deleted jobs are displayed.

On this window, the following operations are available with the same operations as job list window.

- Batch selection / canceling selection of the jobs
  (EDIT \(\rightarrow\) SELECT ALL \(\rightarrow\) CANCEL SELECT)
- Job search (EDIT \(\rightarrow\) JOB SEARCH COND)
- Rearrange of the jobs in the order of date / order of name
  (DISPLAY \(\rightarrow\) DATE (NAME))
- Job detailed information display (DISPLAY \(\rightarrow\) DETAIL)
- Displaying by job groups (DISPLAY \(\rightarrow\) FOLDER)

### Restoring the Job
Choose a job to be restored and select UNDELETE JOB from JOB on the pull down menu.

A dialog box to confirm restoring the selected job.

Select "YES" to restore the job. The restored job is deleted from the trash job list and newly listed to the job list.

"NO" to cancel restoring the job.
8 Parameter
8.3 Mode Operation Setting Parameters

- **Deleting the Job Completely**
  Delete a job from the memory. The job will not be restored after this operation.
  Choose a job to be completely deleted, then select {DELETE JOB} from {JOB} on the pull down menu.

  ![Dialog Box to Confirm Deleting the Selected Job]

  A dialog box to confirm deleting the selected job.

  Select
  [YES] to delete the job completely. The deleted job is deleted from the trash job list.

  [NO] to cancel deleting the job.

- **8.3.0.41 S2C415 to S2C419: TIME RESET**
  These parameters specify whether resetting operation of the specified times is permitted or not.

  S2C415 : CONTROL POWER ON TIME
  S2C416 : SERVO POWER ON TIME
  S2C417 : PLAYBACK TIME
  S2C418 : WORK TIME
  S2C419 : WEAVING TIME

  0 : Prohibit Resetting
  1 : Permit Resetting

  "PERMIT" is set as the initial value for the work time and motion time.
8.3.0.42 S2C431: TOOL NO. SWITCHING

This parameter specifies whether tool number switching is permitted or not.

0 : Prohibited (Only number “0” can be used.)
1 : Permitted (64 type of tools from number “0” to “63” can be used.)

8.3.0.43 S2C433: POSITION TEACHING BUZZER

This parameter specifies whether the buzzer sound at position teaching is used or not.

0 : With buzzer
1 : Without buzzer

8.3.0.44 S2C434: JOB LINKING DESIGNATION (When Twin Synchronous Function Used)

This parameter specifies whether the manipulator at the synchronizing side is to be linked when the manipulator and the station at the synchronized side are performing FWD/BWD or test run, by using the twin synchronous function.

0 : Not operating
1 : Linking

Fig. 8-7: 0 : Does not operate the synchronizing side while teaching the synchronized side.

Fig. 8-8: 1 : Links the synchronizing side while teaching the synchronized side.
8 Parameter
8.3 Mode Operation Setting Parameters

8.3.0.45 S2C437: PLAYBACK OPERATION CONTINUATION FUNCTION

This function is used to decide where to resume the playback on the start operation after suspending the playback and moving the cursor or selecting other jobs.

0: Starts operation where the cursor is located in the job displayed at the moment.

1: The playback continuation window appears. Select “YES” and the playback resumes where the cursor has been located when the playback suspended. If “NO” is selected, the playback resumes where the cursor is located in the job displayed at the moment.

Table 8-8: S2C437

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Where the Playback Resumes</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Resumes where the cursor is located in the job displayed at the moment.</td>
</tr>
<tr>
<td>1</td>
<td>Resumes where the cursor has been located when the playback suspended OR where the cursor is located in the job displayed at the moment.</td>
</tr>
</tbody>
</table>

<Example>
Suspected at step 0003 during the playback of job A
Displays job B
Starts operation
On the playback operation continuation window
• When “YES” selected, the playback resumes from step 0003 of job A
• When “NO” selected, the playback resumes from the current position in job B

Note: When this function is valid (S2C437=1), a light blue cursor is displayed at the instruction section of step where the playback has been stopped. When “YES” is selected, the playback resumes where this cursor is located.

If a job has been edited or FWD/BWD/TEST RUN operation(s) have been executed, the playback cannot resume where it has suspended. Also this function is invalid if the reserved start function is set valid (S2C222=0).
8 Parameter
8.3 Mode Operation Setting Parameters

8.3.0.46 S2C544: I/O NAME DISPLAY FUNCTION FOR JOB

When a user input/output signal, whose name is already set, is used as a job, this function displays the signal name in the form of a comment.

![Image of job content]

When the specification of the signal is group specification (IG#, IGH#, OG#, OGH#), the name will not be displayed. Also, the name will not be displayed when the job is saved at external memory devices.

This parameter can be set on {FUNCTION ENABLE}.window.

0 : Invalid
1 : Valid

8.3.0.47 S2C684: ALL AXES ANGLE DISPLAY FUNCTION

This function enables to change the display of manipulator position from pulse-formed to angle-formed on the specific window.

This function is valid in the following windows.

- Current value (however, it is invalid if the present displayed coordinate systems are “base”, “robot” or “user”.)
- Command position
- Work home position
- Second work home position

![Diagram of function settings]

This function can be valid/invalid on {FUNCTION ENABLE} window.

Select {DISPLAY} on the pull down menu while this function is valid, then {PULSE}, {ABSOLUTE ANGLE} and {GROUND ANGLE} appear. Select one so that the presently displayed data can be changed to the selected data type.
8.3 Mode Operation Setting Parameters

### PULSE
Indicates the pulse data of each axis.

![Pulse Data Display]

### ABSOLUTE ANGLE
Indicates the independent angle at every axes on the basis that the absolute value is 0[deg] when the pulse is 0.

![Absolute Angle Data]

### GROUND ANGLE
Indicates the L- and U-axes angle according to the manipulator installation direction. The value of unoperated axes may vary depending on the manipulator’s posture.

![Ground Angle Data]

**NOTE**
As for the servo track, angle is not indicated but distance (unit [mm]).

8.3.0.48 S2C713: CONTROL POINT OPERATION SETTING ON THE SERVO TRACK

This parameter specifies a motion system by which the manipulator’s control point is fixed while the servo track is in operation. However, it is valid only when the selected control group is specified as a servo track and the servo track is operated by jog keys in the cartesian coordinates.

0 : Normal operation
1 : Control point operation setting on the servo track
8.3.0.49 S2C1203: TOUCH OPERATION FUNCTION IN GENERAL-PURPOSE DISPLAY AREA

This parameter specifies whether window scrolling, page switching, and cursor movement by touch operation in the general-purpose display area are enabled or disabled.

The specification is done through the bit specification.

<table>
<thead>
<tr>
<th>d7</th>
<th>Window scrolling Valid/Invalid: 1: (Invalid)</th>
</tr>
</thead>
<tbody>
<tr>
<td>d6</td>
<td>Page switching Valid/Invalid: 2: (Invalid)</td>
</tr>
<tr>
<td>d5</td>
<td>Cursor movement Valid/Invalid: 4: (Invalid)</td>
</tr>
<tr>
<td>d0</td>
<td></td>
</tr>
</tbody>
</table>

8.3.0.50 S2C1204: CURSOR MOVEMENT FUNCTION BY TOUCH OPERATION ON JOB WINDOW

This parameter specifies the cursor movement operation by touch operation on the job window.

The specification can be done on the (FUNCTION ENABLE SETTING) window.

0: Press [INTERLOCK] + touch operation
1: Touch operation + dialog confirmation
2: Cursor movement by touch operation is not available

Note: S2C1203: When d2 (the cursor movement by the touch operation in the general-purpose display area) is disabled, the cursor cannot be moved.
8.4 Parameters According to Interference Area

These parameters limit the P-point maximum envelope of the manipulator or set the interference area for axis interference or cubic interference.

8.4.1 S1CxG400 to S1CxG415: PULSE SOFT LIMIT

Soft limit is set independently for each axis by pulse value setting. Set current value (pulse value) of the axis at the soft limit set up position.

8.4.2 S2C001: CUBE SOFT LIMIT CHECK

This parameter specifies whether to check the cube soft limit. More than one soft limit can be specified.

If "WITH CHECK" is selected, set up the following parameters.

Units: μm
8.4 Parameters According to Interference Area

Cube Soft Limit (Base Coordinates of Robot TCP)

- S3C000: Robot 1: + side: X
- S3C001: Robot 1: + side: Y
- S3C002: Robot 1: + side: Z
- S3C003: Robot 1: - side: X
- S3C004: Robot 1: - side: Y
- S3C005: Robot 1: - side: Z
- S3C007: Robot 2: + side: X
- S3C008: Robot 2: + side: Y
- S3C009: Robot 2: + side: Z
- S3C010: Robot 2: - side: X
- S3C011: Robot 2: - side: Y
- S3C012: Robot 2: - side: Z
- S3C042: Robot 8: + side: X
- S3C043: Robot 8: + side: Y
- S3C044: Robot 8: + side: Z
- S3C045: Robot 8: - side: X
- S3C046: Robot 8: - side: Y
- S3C047: Robot 8: - side: Z

**Soft Limit**

Soft limit is a software-type function to limit the range of movement of the manipulator.

If the TCP reaches the soft limit during operation, the manipulator automatically stops and no longer moves in that same direction. An alarm occurs if this soft limit is exceeded during playback. This soft limit is classified into two types.

- **Cube Soft Limit**
  Soft limit is set with the absolute value on the base coordinates.

- **Pulse Soft Limit (Independent Axis Soft Limit)**
  Refer to chapter 8.4.0.1 “S1CxG400 to S1CxG415: PULSE SOFT LIMIT” at page 8-32.
8.4.0.3 S2C002: S-AXIS INTERFERENCE CHECK

This parameter specifies whether to check for interference with each manipulator. If "WITH CHECK" is selected, set up the following parameters.

Units: Pulse

- S3C048: S-axis Interference Area Robot 1 (+)
- S3C049: S-axis Interference Area Robot 1 (-)
- S3C050: S-axis Interference Area Robot 2 (+)
- S3C051: S-axis Interference Area Robot 2 (-)
- S3C063: S-axis Interference Area Robot 8 (-)
### 8.4.0.4 S2C003 to S2C066: CUBE/AXIS INTERFERENCE CHECK

**1. Designation of checking**

These parameters specify the cube/axis interference to be used by bit.

- **0**: Cube Interference/Axis Interference Not Used
- **1**: Robot 1
- **2**: Robot 2
- **8**: Robot 8
- **9**: Base Axis 1
- **10**: Base Axis 2
- **16**: Base Axis 8
- **17**: Station Axis 1
- **18**: Station Axis 2
- **24**: Station Axis 24

**2. Checking method**

Designates whether checking is performed by command or feedback.

#### Checking method

The checking method differs according to ON/OFF status of servo power supply.

<table>
<thead>
<tr>
<th>Checking Method Designation</th>
<th>Servo Power Supply ON</th>
<th>Servo Power Supply OFF</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command</td>
<td>Command</td>
<td>Feedback</td>
</tr>
<tr>
<td>Feedback</td>
<td>Feedback</td>
<td>Feedback</td>
</tr>
</tbody>
</table>

During the servo float function operation, checking is performed by feedback regardless of the checking method designation.
It is possible to output whether the TCP during operation is inside or outside as a status signal, and to set the area to control the position by parameters S2C003 to S2C194. When the manipulator attempts to enter this area, the corresponding input signal (e.g. an "entrance prohibit signal") is detected. The manipulator stops immediately if there is an input signal and goes into waiting status until this signal is cleared. This signal is processed in the I/O section. Three methods of interference area settings are prepared for manipulators and stations. For a system with one manipulator, use robot 1.

- **S-axis Interference Area**
  Position is controlled by the pulse value of the S-axis.

- **Cubic Interference Area**
  Up to 64 cubic areas can be set. The edges of the cubes are set parallel to the robot coordinates or the user coordinates.

- **Axis Interference Area**
  Up to 64 areas can be set. Each operation area maximum and minimum value are set for the robot, base axis, and station axis plus and minus side.
8.4 Parameters According to Interference Area

8.4.0.5 S2C067 to S2C194: CUBE USING METHOD

These parameters specify the coordinates for defining the cube. If the user coordinates are selected, also specify the user coordinate system numbers. Set cubic area referring to the cubic interference areas shown below.

Coordinate specification
0 : Pulse (axis interference)
1 : Base coordinates
2 : Robot coordinates
3 : User coordinates

Coordinate No.: Specify the user coordinate number when selecting “3: User Coordinates”.
Units: 1μm

Precaution When Setting the Interference Area

It will be necessary to consider the following when setting the cubic interference and S-axis interference areas. The manipulator is processed to decelerate to stop from the point where it enters in the area. Therefore, set the areas in consideration of the amount of the manipulator movement in the deceleration section shown in the figure below.

The move amount in the speed reduction section is dependent on the moving speed of the manipulator at that time:

- \( V = 1500 \text{mm/s} \rightarrow \text{approx. 300mm (Max.)} \)
- \( V = 1000 \text{mm/s} \rightarrow \text{approx. 160mm} \)
- \( V = 30 \text{mm/s} \rightarrow \text{approx. 3 to 4 mm} \)
- \( V = 20 \text{mm/s} \rightarrow \text{approx. 2mm} \)
Interference Prevention in Interference Area

Processing to prevent interference is executed in the I/O processing section. The relation between the DX200 I/O signal and manipulator operation is shown below.

In wait status with the entrance prohibit signal, the manipulator just barely enters the area for speed reduction processing and then stops.

Fig. 8-9: Connection Example Where Two Manipulators are Operated in the Same Area
8.4.0.6 S3C000 to S3C047: CUBE SOFT LIMIT

These parameters specify auxiliary functions of S2C001 parameter. For details, see chapter 8.4.0.2 “S2C001: CUBE SOFT LIMIT CHECK” at page 8-32.

8.4.0.7 S3C048 to S3C063: S-AXIS INTERFERENCE AREA

These parameters specify auxiliary functions of S2C002 parameter. For details, see chapter 8.4.0.3 “S2C002: S-AXIS INTERFERENCE CHECK” at page 8-34.

8.4.0.8 S3C064 to S3C1087: CUBIC INTERFERENCE AREA

These parameters specify auxiliary functions of S2C003 to S2C066 parameters. For details, see chapter 8.4.0.4 “S2C003 to S2C066: CUBE/AXIS INTERFERENCE CHECK” at page 8-35.

8.4.0.9 S3C1089 to S3C1096: ROBOT INTERFERENCE AREA

These parameters specify auxiliary functions of S2C236 to S2C263 parameters. For details, see chapter 8.4.0.6 “S3C000 to S3C047: CUBE SOFT LIMIT” at page 8-39.

8.4.0.10 S3C1097: A SIDE LENGTH OF WORK-HOME-POSITION CUBE

Units: 1μm

This parameter specifies a side length of the cube for the work home position.
8.5 Parameters According to Status I/O

These parameters set the parity check or I/O setting for user input/output signals.

8.5.0.1 S2C235: USER OUTPUT RELAY WHEN CONTROL POWER IS ON

This parameter specifies the state of the user output relays when the control power is turned ON. Since the power OFF state, including peripheral devices, cannot be completely reproduced, take note when restarting.

0 : Reset to the power OFF state
1 : Initialized (all user relays OFF)

8.5.0.2 S4C000 to S4C015, S4C1100 to S4C1115: PARITY OF USER INPUT GROUPS

These parameters specify whether to execute parity checks with parameters when instructions covering the input group (1G#) are executed. The instructions covering the input groups are as shown below.

- IF Sentence (JUMP, CALL, RET, PAUSE)
- Pattern Jump, Pattern Job Call
- DIN
- WAIT

A parity check is performed against the input group where a bit-ON (1) was done by this parameter.

S4C000 to S4C015 : IG#(1) to IG#(256)
S4C1100 to S4C1115 : IG#(257) to IG#(512)

Parity bits are set as the highest level bits of each input group and are written in even parity. If an error is detected during parity check, an alarm occurs and the manipulator stops. Remains unchanged if no parity check is specified.
8.5 Parameters According to Status I/O

8.5.0.3 S4C016 to S4C031, S4C1116 to S4C1131: PARITY OF USER OUTPUT GROUPS

These parameters specify whether the output group instruction is executed with parity check (even parity).

A parity check is performed against the output group where a bit-ON (1) was done by this parameter.

- S4C016 to S4C031: OG#(1) to OG#(256)
- S4C1116 to S4C1131: OG#(257) to OG#(512)

Parity bits are set as the highest level bits of each output group. For example, if OG#01 is specified with parity and DOUT OG# (1) 2 is executed, the result will be 00000010 if 2 is binary converted. Since there will be only one bit (odd) ON at this time, the parity bit (highest level bit) will be set to ON and 10000010 (130) will be output to OG# (1).

As in the case of a variable such as DOUT OG# (1) B003 parity bits are added to the contents of the variable data. However, if the contents of the variable exceed 127, as in the case of DOUT OG# (1) 128, an alarm will occur. Remains unchanged if no parity check is specified.
8 Parameter
8.5 Parameters According to Status I/O

8.5.0.4 S4C032 to S4C047, S4C1132 to S4C1147: DATA OF USER INPUT GROUPS

These parameters specify whether to handle the input group data as binary data or as BCD data when an instruction for the input group (IG#) is executed. The instructions covering the input groups are as shown below.

- IF Sentence (JUMP, CALL, RET, PAUSE)
- Pattern Jump, Pattern Job Call
- DIN
- WAIT

The input group where a bit-ON (1) was done by this parameter is treated as BCD data.

- S4C032 to S4C047 : IG#(1) to IG#(256)
- S4C1100 to S4C1115 : IG#(257) to IG#(512)
8 Parameter
8.5 Parameters According to Status I/O

8.5.0.5 S4C048 to S4C063, S4C1148 to S4C1163: DATA OF USER OUTPUT GROUPS

These parameters specify whether the output group instruction is executed with binary data or BCD data.

The output group where a bit-ON (1) was done by this parameter is treated as BCD data.

S4C048 to S4C063: OG#(1) to OG#(256)
S4C1148 to S4C1163: OG#(257) to OG#(512)

---

**Differences Between Binary Data and BCD Data**

For the input group and output group, the result will depend on whether the binary or BCD formula is used.

**Example** When the input function is [01010101]

<table>

</table>

Total is in ones.
Total is in tens.
Total is in hundred.
Total is in thousand.

However, in the case of BCD data, because the upper bound value is 99, it is not possible to use any value which exceeds nine in the one or ten digit place.
8 Parameter
8.5 Parameters According to Status I/O

8.5.0.6 S4C064 to S4C079, S4C1164 to S4C1179: USER OUTPUT GROUP TO BE INITIALIZED AT SWITCHING MODE

Set the user output group with bit to be initialized at switching mode.

Use these parameters when using universal output signals as work instructions for peripheral devices.

The signal of the output group where the bit-on (1) is done by this parameter will be turned OFF at mode switching.

S4C064 to S4C079 : OG#(1) to OG#(256)
S4C1164 to S4C1179 : OG#(257) to OG#(512)

8.5.0.7 S4C240: USER OUTPUT NO. WHEN MANIPULATOR DROP ALLOWABLE RANGE ERROR OCCURS

This parameter specifies the user output number to output the manipulator drop allowable range error alarm occurrence externally.

When this function is not used, set "0".
8.6 Parameters According to Coordinated or Synchronized Operation

These parameters make the settings for coordinated or synchronized operations between manipulators or between manipulators and stations.

8.6.0.1 S2C212: +MOV or +SMOV INSTRUCTION SPEED INPUT

This parameter specifies whether the speed inputting for move instructions of the master robot in a coordinated job is permitted or not.

**<Example>** 0: Not Provided

| SMOV L | V=100 |
| +MOV L | V=100 |

← Master side
Speed specification not provided

**<Example>** 1: Provided

| SMOV L | V=100 |
| +MOV L | V=100 |

← Master side
Speed specification provided

8.6.0.2 S2C213: +MOV INSTRUCTION INTERPOLATION INPUT

This parameter specifies which interpolation is permitted for move instructions for the master robot in a coordinated job. More than one instruction can be specified.

8.6.0.3 S2C231: OPERATION METHOD AT FWD/BWD OPERATION OR TEST RUN BY INDEPENDENT CONTROL

This parameter specifies the operation method at FWD/BWD operation or test run by independent control.

0 : The job of the task that is currently displayed operates.
1 : Jobs of all the tasks operate.
8.6.4  S2C232: JOB AT CALLING MASTER OF SUBTASK BY INDEPENDENT CONTROL

This parameter specifies the job which is called up when the master of the subtask is called up by independent control.

0 : Master job
1 : Root job

Master Job: Job registered in the master control window
Root Job: Job activated by PSTART instruction

8.6.5  S2C264: STATION AXIS CURRENT VALUE DISPLAY FUNCTION

This parameter specifies whether the function to display the current value of the station axis in the following units is valid/invalid.

0 : Invalid
1 : Valid

Rotary axis : Angle (deg)
Servo track : Distance (mm)

Regarding whether to specify the rotary axis or the servo track, refer to chapter 8.6.6 “S2C265 to S2C288: STATION AXIS DISPLAYED UNIT” at page 8-46.

8.6.6  S2C265 to S2C288: STATION AXIS DISPLAYED UNIT

This parameter specifies the station axis displayed unit (bit specification).

0 : Display angle (deg)
1 : Display in distance (mm)
8 Parameter
8.6 Parameters According to Coordinated or Synchronized Operation

**Setting Method**
Set a numerical value (decimal) where the bit of the axis to be displayed in the units of distance becomes 1.

![Binary representation diagram]

**Example** When 1st and 3rd axes of station 1 are displayed in the units of distance:

![Binary representation diagram]

Therefore, set parameter S2C265 of station 1 to 5.

8.6.0.7 S2C420: POSTURE CONTROL OF SYNCHRONIZED MANIPULATOR (When Twin Synchronous Function Used)

This parameter specifies the posture control method for synchronized manipulator performing compensation during playback by using the twin synchronous function.

0 : Change posture according to station movement
1 : Fixed in relation to the ground

8.6.0.8 S2C421: POSTURE CONTROL OF MANIPULATOR IN MULTI-JOB (When Twin Synchronous Function Used)

This parameter specifies the posture control method for manipulator executing compensation at the linking side when job linking is performed during FWD/BWD operation by the twin synchronous function.

0 : Change posture according to station movement
1 : Fixed in relation to the ground
8.6.0.9  S2C687: OPERATION OF JOB WITHOUT CONTROL GROUP SPECIFICATION

When the servo power supply is individually turned OFF where jobs in multiple number of tasks are operated using the independent control function, the job execution of the control group whose servo power supply is turned OFF is interrupted. The jobs of other control groups continue their execution.

For the jobs without control group specification such as master job, the conditions for execution can be set by the parameter.

0 : Execution possible only when servo power supply to all the axes have been turned ON.
1 : Execution possible when servo power supply to any axis is turned ON.

8.6.0.10  S2C688: EXECUTION OF "BWD" OPERATION

This parameter prohibits step-back operation of a job without a step.

0 : Execution possible only when servo power supply to all the axes have been turned ON.
1 : Execution possible when servo power supply to any axis is turned ON.

8.6.0.11  S3C1101: MAXIMUM DEVIATION ANGLE OF CURRENT STATION POSITION (When Twin Synchronous Function Used)

Used when the twin synchronous function is used. This parameter specifies the maximum deviation between the teaching position and the current station position.

0 : No deviation check
Other than 0 : Deviation angle (units : 0.1°)

In the above figure on the left, the follower R2 executes the job of subtask 2 in synchronization with the motion of the station axis which is moved by the R1 job. In this procedure, the job of subtask 2 controls only the R2 robot axis.

If the teaching position of the station in the subtask 2 differs from the station current position (controlled by the subtask 1 job), the difference is automatically offset so that R2 keeps the taught position in relation to the station.

Difference between the taught and the station current positions is always monitored. If the difference exceeds a set value of the parameter, the message “PULSE LIMIT (TWIN COORDINATED)” appears.
8.7 Parameters for Other Functions or Applications

These parameters make the settings for other functions or applications.

8.7.0.1 S1CxG049 to S1CxG051: SMALL CIRCLE CUTTING

These parameters prescribe cutting operation at small circle cutting.

- **S1CxG049**: Set the minimum diameter of a figure in the units of μm that can be processed by small-circle cutting machine.
- **S1CxG050**: Set the maximum diameter of a figure in the units of μm that can be processed by small-circle cutting machine.
- **S1CxG051**: Set the maximum cutting speed at operation by CUT instruction in the units of 0.1 mm/s.

8.7.0.2 S1CxG052 to S1CxG053: SMALL CIRCLE CUTTING DIRECTION LIMIT VALUE

These parameters set the cutting direction limits at small circle cutting.

- **S1CxG052**: Set the limit value in the positive direction of cutting angle DIR set by CUT instruction, in the units of 0.01°.
- **S1CxG053**: Set the limit value in the negative direction of cutting angle DIR set by CUT instruction, in the units of 0.01°.

8.7.0.3 S1CxG054 to S1CxG055: SMALL CIRCLE CUTTING OVERLAP VALUE

These parameters set the overlapped value at small circle cutting.

- **S1CxG054**: Set the operation radius at inner rotation in the units of 1 μm after overlapping by CUT instruction.
- **S1CxG055**: Set the rotation angle at inner rotation in the units of 0.1° after overlapping by CUT instruction.

8.7.0.4 S1CxG063, S1CxG064: PATTERN CUTTING DIMENSION

These parameters set the minimum diameter (S1CxG063) and the maximum diameter (S1CxG064) for the pattern cutting in units of μm.

8.7.0.5 S1CxG065: MIRROR SHIFT SIGN INVERSION

This parameter sets which axis to be shifted (mirror-shift: invert the sign).

- **1st axis (0: Not invert, 1: Invert)**
- **7th axis**

8.7.0.6 S2C430: RELATIVE JOB OPERATION METHOD

This parameter specifies how to operate a relative job. A method to convert a relative job into a standard job (pulse), and a conversion method to calculate the aimed position (pulse position) when a relative job is operated can be specified.

- **0**: Previous step with priority (B-axis moving distance minimized.)
- **1**: Form with priority
- **2**: Previous step with priority (R-axis moving distance minimized.)
8.7.0.7 S2C1135 : PROHIBIT WELDING SECTION SPEED OVERRIDE

This parameter prohibits the speed override within the welding section. While the manipulator is in the welding section, it moves at the same speed as in the situation where the speed override is not specified.

0 : Invalid
1 : Valid

8.7.0.8 S2C1137 : DISPLAY WELDING CONDITION FILE COMMENT ON THE JOB WINDOW FUNCTION

This parameter specifies a comment to the welding start condition file or the welding end condition file, and then displays the comment on the job window when teaching the file by ARCON, ARCOF or ARCSET instruction.

0 : Invalid
1 : Valid

8.7.0.9 S3C1111 to S3C1190: ANALOG OUTPUT FILTER CONSTANT

(When analog output corresponding to speed function is used)

By setting a constant to filter, a filter processing can be performed for the output analog signal.

8.7.0.10 S3C1191: CUT WIDTH CORRECTION VALUE

(When form cutting function is used)

This parameter specifies the path correction value for pattern cutting operation. A value 1/2 of the cut width is set in units of μm.
8 Parameter
8.8 Hardware Control Parameters

8.8 Hardware Control Parameters

These parameters make the hardware settings for fan alarm or relay operation, etc.

8.8.0.1 S2C646: ANTICIPATOR FUNCTION

This parameter specifies anticipation output.

0 : Invalid
1 : Valid

The anticipator function is a function to quicken or slow the ON/OFF timing of four universal output signals and two user output groups. Using this function, signal output can be carried out before or after the step is reached. As a result, timing deviation due to delayed motion of peripheral devices and robot motion can be adjusted.

Setting the time to a negative value (-) advances the signal output. This setting is effective when adjusting timing deviation due to delayed motion of peripheral devices.

Setting the time to a positive value (+) delays the signal output. This setting is effective when adjusting timing deviation due to delayed robot motion.

<Advanced Signal Output>

Signal output is carried out before the step is reached.

<table>

620 of 704
8.8.0.2  S4C327 to S4C390: SETTING OF OPERATING RELAY NO.

Up to 64 output signals can be turned ON/OFF with the programming pendant. The object relay No. is set in these parameters. Although it is possible to set optional values for output No. 1 to 1024 in the parameters, the following must be taken into consideration.

• Avoid setting duplicate numbers.
• The signal turned ON or OFF with the programming pendant is operated again or remains unchanged until the instruction is executed.

8.8.0.3  S4C391 to S4C454: OPERATING METHOD OF RELAYS

These parameters specify the operating method of output signals by the programming pendant. The operating method can be specified for each output signal.

<table>
<thead>
<tr>
<th>Parameter Setting Value</th>
<th>Operation of Output Signal</th>

</tbody>
</table>

8.8.0.4  S2C786 to S2C788: COOLING FAN ALARM DETECTION

This parameter specifies a detection display for cooling fan 1 to 3 with alarm sensor, connected to power ON unit.

0: No detection
1: Detected with message display
2: Detected with message and alarm display

8.8.0.5  S2C1170 to S2C1171: COOLING FAN ALARM DETECTION

This parameter specifies a detection display for cooling fan 4 to 5 with alarm sensor, connected to power ON unit.

0: No detection
1: Detected with message display
2: Detected with message and alarm display
8.8.0.6 S2C789 to S2C792: COOLING FAN ALARM 1 OPERATION

8.8.0.7 S2C793 to S2C796: COOLING FAN ALARM 2 OPERATION

8.8.0.8 S2C797 to S2C800: COOLING FAN ALARM 3 OPERATION

These parameters specify the operation of cooling fan 1 to 3 with alarm sensor, connected to power ON unit.

Each bit specifies the power ON unit to which the detecting sensor is connected.

8.8.0.9 S2C1174: COOLING FAN ALARM 4 OPERATION

8.8.0.10 S2C1175: COOLING FAN ALARM 5 OPERATION

These parameters specify the operation of cooling fan 4 to 5 with alarm sensor, connected to power ON unit.

8.8.0.11 S2C801 to S2C804: FAN ALARM 1 WELDER STATUS

8.8.0.12 S2C805 to S2C808: FAN ALARM 2 WELDER STATUS
8 Parameter
8.8 Hardware Control Parameters

8.8.0.13 S2C809 to S2C812: FAN ALARM 3 WELDER STATUS
These parameters specify the power status that detects a fan alarm.
0 : Detect during control power ON
1 : Detect during servo power ON

8.8.0.14 S2C1178: FAN ALARM 4 WELDER STATUS

8.8.0.15 S2C1179: FAN ALARM 5 WELDER STATUS
This parameter specifies the power status that detects a fan alarm.
0 : Detect during control power ON
1 : Detect during servo power ON
8.9 TRANSMISSION PARAMETERS

These parameters are used when the optional FC1, FC2, or data transmission function is used.

For details, refer to the optional manual “DX200 DATA TRANSMISSION FUNCTION”.

8.10 Application Parameters

8.10.1 Arc Welding

8.10.1.1 AxP000: APPLICATION

This parameter specifies the application. Set "0" for arc welding.

8.10.1.2 AxP003: WELDING ASSIGNMENT OF WELDING START CONDITION FILE

This parameter specifies the beginning condition number in the welding start condition file to be assigned to Welder 2. Condition files of a lower number are automatically assigned to Welder 1. For a system with one Welder, set "49" (maximum value).

8.10.1.3 AxP004: WELDING ASSIGNMENT OF WELDING END CONDITION FILES

This parameter specifies the beginning condition number in the welding END condition file to be assigned to Welder 2. Condition files of a lower number are automatically assigned to Welder 1. For a system with one Welder, set "13" (maximum value).

8.10.1.4 AxP005: WELDING SPEED PRIORITY

This parameter specifies whether the welding speed is specified by the "ARCON" instruction, by the welding start condition file, or by the additional times of the "MOV" instruction.

8.10.1.5 AxP009: WORK CONTINUING

This parameter specifies whether to output an "ARCON" instruction to restart after the manipulator stopped while the "ARCON" instruction is being output.
8.10 Application Parameters

8.10.1.6 AxP010: WELDING INSTRUCTION OUTPUT
This parameter specifies the beginning number (0 to 12) of the analog output channel to the Welder. "0" indicates that no Welder exists.

8.10.1.7 AxP011, AxP012: MANUAL WIRE OPERATION SPEED
These parameters specify the manual wire operation speed as a percentage of the maximum instruction value. Instruction polarity is determined by the current instruction in the Welder characteristic file. The setting range is from 0 to 100.

8.10.1.8 AxP013, AxP014: WELDING CONTROL TIME
These parameters specify the welding control time in units of minutes. The setting range is from 0 to 999.

8.10.1.9 AxP015 to AxP017: NUMBER OF WELDING CONTROL
These parameters specify the number of welding controls. The setting range is from 0 to 99.

8.10.1.10 AxP026 to AxP029: TOOL ON/OFF USER OUTPUT NO. (Jigless system)
These parameters specify the user output number for the tool open/close operation by specific keys.

8.10.2 Handling Application

8.10.2.1 AxP002, AxP004: f1 KEY FUNCTION
These parameters set the output signal to assign for f1 key.
0: Not specified
1 to 4: Specific outputs for HAND-1 to HAND4-1
5: User output (No. is specified by AxP004).

8.10.2.2 AxP003, AxP005: f2 KEY FUNCTION
These parameters set the output signal to assign for f2 key.
0: Not specified
1 to 4: Specific outputs for HAND-2 to HAND4-2
5: User output (No. is specified by AxP005)
8.10 Application Parameters

8.10.3 Spot Welding

8.10.3.1 AxP003: MAXIMUM NUMBER OF CONNECTED WELDERS
This parameter specify the maximum number of welders which are to be used. The value is automatically set at start-up. No modification is needed.

8.10.3.2 AxP004: GUN FULL OPEN STROKE ON/OFF SIGNAL
This parameter specifies which stroke switching signal is output ON or OFF to make the gun fully-opened for each gun.

Bit specification (1 for 01) for 8 guns. The initial setting is “0”.

```
0 0 0 0 0 0 0 0
| | | | | | | |
8 7 6 5 4 3 2 1 Gun number
```

8.10.3.3 AxP005: STROKE CHANGE ANSWER TIME LIMIT
When using the X2 gear mechanical stopper gun and switching gun stroke, this parameter sets the time from the stroke-switching-sequence start until the pressure instruction end.

The initial setting is “0”, with which the switching signal is output for the “stopper-type stroke switching time” set in the file, and then the gun pressure instruction is turned OFF.

8.10.3.4 AxP006: PARITY SPECIFICATION FOR WELDING CONDITIONS
When adding the parity signal to the welding condition signal with the Welder connected to each welding gun, this parameter specifies odd or even parity.

Bit specification for 4 Welders. (0 : odd number, 1 : even number) The initial setting is “0”.

```
0 0 0 0 0 0 0 0
| | | | |
4 3 2 1 Welder number
```
8 Parameter

8.10 Application Parameters

8.10.3.5 AxP007: ANTICIPATE TIME

When executing the GUNCL or SPOT instruction with NWAIT specified in the previous move instruction but the time is not specified by ATT in the GUNCL or SPOT instruction, this parameter specifies the anticipate condition (time). The initial setting is "0", with which the each instruction is executed as soon as the taught position of the previous move instruction is reached, as normal operation.

8.10.3.6 AxP015: WELDING ERROR RESET OUTPUT TIME

This parameter sets the output time of the welding error reset signal to the Welder when the alarm reset signal is input.
If the setting is "0", the welding error reset signal is not output to the Welder even if the alarm reset signal is input.

8.10.3.7 AxP016, AxP017: tip WEAR AMOUNT ALARM VALUE

These parameters set the tip wear amount alarm values (AxP016: movable side, AxP017: fixed side) at the wear detection.

8.10.4 General-purpose Application

8.10.4.1 AxP009: WORK CONTINUE PROHIBIT

This parameter specifies whether to output TOOLON instruction or not at restarting when the work is stopped for some reasons during the output of TOOLON instruction.

8.10.5 Painting Application

8.10.5.1 AxP080: Specify the Robot With the Paint Gun 1
To specify the robot with the paint gun 1 connected, the robot 1 to the robot 8 must be set as 0 to 7. The initial value is 0 (robot 1).

8.10.5.2 AxP081: Specify the Robot With the Paint Gun 2
To specify the robot with the paint gun 2 connected, the robot 1 to the robot 8 must be set as 0 to 7. The initial value is 0 (robot 1).

8.10.5.3 AxP082: Specify the Robot With the Paint Gun 3
To specify the robot with the paint gun 3 connected, the robot 1 to the robot 8 must be set as 0 to 7. The initial value is 0 (robot 1).

8.10.5.4 AxP083: Specify the Robot With the Paint Gun 4
To specify the robot with the paint gun 4 connected, the robot 1 to the robot 8 must be set as 0 to 7. The initial value is 0 (robot 1).
9 General Purpose Application

9.1 Simplified Teaching and Playback

9.1.1 Teaching

9.1.1.1 Preparation for Teaching

Perform the following tasks before starting to teach.

- Set the operation mode to teach mode.
- Enter the job name.

1. Confirm that the mode switch on the programming pendant is set to “TEACH.” If not, set the switch to “TEACH.”

2. Press [SERVO ON READY].
   The SERVO ON lamp will blink. If [SERVO ON READY] is not pressed, the servo power supply cannot be turned ON using the Enable switch.

3. Select {JOB} under the main menu, and select {CREATE NEW JOB} in the sub menu.

4. After the NEW JOB CREATE window appears, press [SELECT].
5. After the following window appears, input the job name. The word “TEST” is used in this example job name.

6. Move the active window to software keypad by pressing the [AREA]. Move the cursor to “T” and press [SELECT]. Enter “E,” “S,” and “T” in the same manner. The characters can also be entered by directly touching each character on the screen.

7. Press [ENTER] to register.
8. Move the cursor to “EXECUTE” and press [SELECT]. The job “TEST” is registered and the job is displayed. The NOP and END instructions are automatically registered.

**Characters which can be Used for Job Names**

Job names can be created from numbers and the alphabetical letters. The input display can be switched between upper-case characters, lower-case characters, and symbols by pressing [PAGE] during the operation 5. Up to 32 characters can be used.
9.1.2 Teaching Procedure

To playback the manipulator, the instruction to move the manipulator must be written in a job. This instruction is called a move instruction. The destination position, the interpolation method, the play speed, etc. are registered in the move instruction.

Main move instructions begin with "MOV" in the INFORM III language used by the DX200.

<Example>
MOVJ  VJ=50.00
MOVJ  VJ=50.00
MOVJ  VJ=50.00
MOVJ  VJ=50.00

<Example>

Refer to the following JOB CONTENT window. When executing playback, the manipulator moves to the position of Step 1 with the interpolation type and play speed registered in Step 1’s move instruction. Then, the manipulator moves between Steps 1 and 2 with the interpolation type and play speed registered in Step 2’s move instruction. Then, the manipulator moves between Steps 2 and 3 with the interpolation type and play speed registered in Step 3’s move instruction. After the manipulator reaches the position of Step 3, the manipulator then executes the TIMER instruction followed by the DOUT instruction, and then continues on to Step 4.

```
JOB CONTENT
JOB CONTENT window

0000 NOP
0001 MOVJ VJ=50.00
0002 MOVJ VJ=50.00
0003 MOVJ VJ=50.00
0004 TIMER T=5.00
0005 DOUT OT#(1) ON
0006 MOVJ VJ=50.00
0007 MOVJ VJ=50.00
0008 END
```

Step 1

MOVE VJ=50.00

Step 2

MOVE VJ=50.00

Step 3

MOVE VJ=1122

To Step 4
9 General Purpose Application
9.1 Simplified Teaching and Playback

Teaching a Job
A job is a work program that describes the tasks that the manipulator will execute. Jobs are created using a robot programming language called INFORM III.

The following example will instruct you how to teach the manipulator all of the steps from Point A to Point B of the following workpiece. This job can be completed in 6 steps.

Fig. 9-1: Teaching a Job

Actual work is not performed here.
9 General Purpose Application
9.1 Simplified Teaching and Playback

**Step 1 -- Standby Position**
Always be sure the manipulator is in a safe work area before operation.

1. Grip the Enable switch and the servo power will turn ON. The manipulator can then be operated.
2. Move the manipulator to the standby position using [Axis Key]s. Be sure the position is safe and that the work area is appropriate for the job to be programmed.
3. Select joint interpolation by pressing [MOTION TYPE]. Joint instruction “MOVJ...” will be displayed in the input buffer line.

4. Move the cursor to the line number 0000 and press [SELECT].

5. The input buffer line appears. Move the cursor to the right to VJ=*.**, which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 50%.

6. Press [ENTER]. Step1 (Line 0001) is registered.

```
0000  NOP
0001  END
```

```
0000  NOP
0001  MOVJ VJ=50.00
0002  END
```
9 General Purpose Application
9.1 Simplified Teaching and Playback

**Step 2 -- Near the Work Start Position**
Define the manipulator work pose.

1. Move the manipulator to the working position using [Axis Key]s.
2. Press [ENTER]. Step 2 (Line 0002) is registered.

<table>
<thead>
<tr>
<th>Step 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
</tr>
</tbody>
</table>

**Step 3 -- Work Start Position**
Move the manipulator to the work start position with the pose as shown in Step 2.

1. Change to medium speed by pressing [FAST] or [SLOW] until \( \text{ } \) is displayed in the status area.
2. Do not release the pose in Step 2. Press [COORD] to select the cartesian coordinates. Move the manipulator to the welding start position using [Axis Key]s.
3. With the cursor located on the line number 0002, press [SELECT].
4. The input buffer line appears. Move the cursor to the right to \( VJ=\ldots \), which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 12.50%.
5. Press [ENTER]. Step 3 (Line 0003) is registered.

</tbody>
</table>
Step 4 -- Work End Position
Specify the work end position.

1. Move the manipulator to the work end position with [Axis Key]s. While the manipulator is moving, keep a wide enough distance to ensure it will not strike the workpiece. There is no need to follow the work line too closely.

3. With the cursor located on the line number 0003, press [SELECT].

4. The input buffer line appears. Move the cursor to the right to V=.*, **, which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 138 cm/min.

5. Press [ENTER]. Step 4 (Line 0004) is registered.
Step 5 -- Clear Position
Move the manipulator to a position where it will not strike the workpiece or fixture.

1. Change the speed to high speed by pressing [FAST].

- Step 1
- Step 2
- Step 3
- Step 4
- Step 5

Note: This button only affects teaching speed. When the job is played, the job will execute at the speed defined in Step 4.

2. Move the manipulator with [Axis Key]s to a position where it will not strike the fixture.

3. Press [MOTION TYPE] to set to the joint interpolation type (MOVJ).

4. With the cursor located on line number 0004, press [SELECT].

5. The input buffer line appears. Move the cursor to the right to VJ=12.50, which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 50%.

6. Press [ENTER]. Step5 (Line 0005) is registered.

| 0000 | NOP     |
| 0001 | MOVJ VJ=50.00 |
| 0002 | MOVJ VJ=50.00 |
| 0003 | MOVJ VJ=12.50 |
| 0004 | MOVJ V=138 |
| 0005 | MOVJ VJ=50.00 |
| 0006 | END     |
9 General Purpose Application
9.1 Simplified Teaching and Playback

Step 6 -- Near the Standby Position
Move the manipulator near the standby position.

1. Move the manipulator near the standby position with [Axis Key]s.
2. Press [ENTER]. Step6 (Line 0006) is registered.

<table>
<thead>
<tr>
<th>Line</th>

9 General Purpose Application
9.1 Simplified Teaching and Playback

Ensuring the First and Last Step are Identical
The manipulator has stopped at Step 6, which should be very close to Step 1.

It is possible to move directly from the job end position of Step 5 to Step 1, so the manipulator can begin the next job quickly and efficiently.

The following operation will make Step 6 (end position) and Step 1 (standby position) identical.

1. Move the cursor to Step 1 (Line 0001).

```
0000 NOP
0001 MOVJ VJ=50.00
0002 MOVJ VJ=50.00
0003 MOVJ VJ=12.50
0004 MOVJ VJ=50.00
0005 MOVJ VJ=50.00
0006 MOVJ VJ=50.00
0007 END
```

2. Press [FWD]. The manipulator will move to Step 1.

3. Move the cursor to Step 6 (Line 0006).

```
0000 NOP
0001 MOVJ VJ=50.00
0002 MOVJ VJ=50.00
0003 MOVJ VJ=12.50
0004 MOVJ VJ=50.00
0005 MOVJ VJ=50.00
0006 MOVJ VJ=50.00
0007 END
```

4. Press [MODIFY].

5. Press [ENTER]. This will change the position of Step 6 to be the same as Step 1.
9.1.3 Path Confirmation

The job is now complete. Try to check each step separately to ensure there are no problems.

1. Move the cursor to Step 1 (Line 0001).

```
 0000  NOP
 0001  MOVJ VJ=50.00
 0002  MOVJ VJ=50.00
 0003  MOVJ VJ=12.50
 0004  MOVL V=138
 0005  MOVJ VJ=50.00
 0006  MOVJ VJ=50.00
 0007  END
```

2. Change to medium speed by pressing [FAST] or [SLOW].

3. Press [FWD] to confirm each step executed by the manipulator. Each time [FWD] is pressed, the manipulator moves one step.

4. When you finish step confirmation, move the cursor to the beginning of the job.

5. Run all the steps continuously. Hold down [INTERLOCK] and press [TEST START]. The manipulator plays back all the steps continuously and stops when one cycle is finished.

6. Proceed to the next section to change the position and speed of the job steps.
9.1.4 Correcting a Job

**CAUTION**

- After the job is corrected, be sure to confirm the path.

- **Before Correcting a Job**
  Confirm the manipulator's motion in each step. If any position modification or adding or deleting of steps is necessary, display the job content first with the following procedure.

1. Select {JOB} under the main menu and {JOB} under the sub menu to display the JOB CONTENT window.
9 General Purpose Application
9.1 Simplified Teaching and Playback

9.1.1.5 Changing the Position Data

Change the position registered in Step 2.

1. Move the manipulator to Step 2 (Line 0002) by pressing [FWD].
2. Move the manipulator to the modified position with [Axis Key]s.
3. Press [MODIFY].
4. Press [ENTER]. The step’s position data is changed.

- Adding a Step
Add a new step between Step 5 and Step 6.

1. Move the manipulator to Step 5 (Line 0005) by pressing [FWD].
2. Move the manipulator to the position at which you wish to add a step using [Axis Key]s.
3. Press [INSERT].
4. Press [ENTER]. The step is added. When a step is added, the numbering is automatically adjusted to count the new step.
### Deleting a Step
Delete the step you just added.

1. Move the manipulator to Step 6 (Line 0006) by pressing [FWD].

   0000  NOP
   0001  MOVJ VJ=50.00
   0002  MOVJ VJ=50.00
   0003  MOVJ VJ=12.50
   0004  MOVVL V=138
   0005  MOVJ VJ=50.00
   **0006**  MOVJ VJ=50.00
   0007  MOVJ VJ=50.00
   0008  END

2. Make sure the cursor is on the step you wish to delete, and press [DELETE].

3. Press [ENTER]. The step is deleted. When a step is deleted, the numbering of step is automatically adjusted corresponding to the deletion.

   
   0000  NOP
   0001  MOVJ VJ=50.00
   0002  MOVJ VJ=50.00
   0003  MOVJ VJ=12.50
   0004  MOVVL V=138
   0005  MOVJ VJ=50.00
   0006  MOVJ VJ=50.00
   0007  END

---

When “Error 2070: Set Robot Exactly to Taught Position” Occurs

When the operator presses [ENTER] during the previous operation, an error can occur in some cases. The error occurs because the manipulator has not been moved exactly to the taught position. Cancel the error with either of the following two procedures:

- Press [CANCEL] and press [FWD] to move the manipulator to the position of the step.
- Press [MODIFY] and press [ENTER] to change the position data of the step, then press [DELETE] and press [ENTER].

If the cursor in the window is blinking, the manipulator is not in the taught position.
9 General Purpose Application
9.1 Simplified Teaching and Playback

- **Changing the Speed between Steps**  
  Change the manipulator speed. Slow the speed between Step 3 and Step 4.

  1. Move the cursor to Step 4.

    ```
    0000   NOP
    0001   MOVJ VJ=50.00
    0002   MOVJ VJ=50.00
    0003   MOVJ VJ=12.50
    0004   MOVJ vJ=138
    0005   MOVJ VJ=50.00
    0006   MOVJ VJ=50.00
    0007   END
    ```

    2. Move the cursor to the instruction and press [SELECT].

    ```
    0000   NOP
    0001   MOVJ VJ=50.00
    0002   MOVJ VJ=50.00
    0003   MOVJ VJ=12.50
    0004   MOVJ vJ=138
    0005   MOVJ VJ=50.00
    0006   MOVJ VJ=50.00
    0007   END
    ```

    3. The input buffer line appears. Move the cursor to the right to “V=138,” which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 66cm/min.

    ```
    0000   NOP
    0001   MOVJ VJ=50.00
    0002   MOVJ VJ=50.00
    0003   MOVJ VJ=12.50
    0004   MOVJ vJ=66
    0005   MOVJ VJ=50.00
    0006   MOVJ VJ=50.00
    0007   END
    ```

    4. Press [ENTER]. The speed is changed.

    ```
    0000   NOP
    0001   MOVJ VJ=50.00
    0002   MOVJ VJ=50.00
    0003   MOVJ VJ=12.50
    0004   MOVJ vJ=66
    0005   MOVJ VJ=50.00
    0006   MOVJ VJ=50.00
    0007   END
    ```

The unit for speed can be verified and modified by “SPEED DATA INPUT FORM” from {SETUP} → {OPERATE COND}.
9.1.2 Playback

9.1.2.1 Preparation Before Playback

To run the program from the beginning of the job, perform the following operation.

- Move the cursor to the beginning of the job.
- Move the manipulator close to Step 1 with [Axis Keys].

When playback is started, the manipulator begins to move from the Step 1.

9.1.2.2 Playback Procedure

Begin operation only after ensuring there is no one in the working envelope of the manipulator.

1. Switch the mode switch on the programming pendant to “PLAY.”
2. Press [SERVO ON READY] to turn ON the servo power.
3. Press [START]. The manipulator will perform one complete taught cycle and then stop.
9.1.3 Example for General Purpose Application

9.1.3.1 Example Job

The figure below shows an example of cutting. The job creation procedure is then explained.

</tbody>
</table>
9.1.3.2  Teaching Procedure

The teaching procedure of Step 2 which specifies the cutting pose and Step 3 and 4 (cutting section) are explained.

- Teach Step 1, which is the standby position, to a safe position where the manipulator will not collide with the workpiece and the tool.
- Confirm the cutting path with [FWD] and [BWD] after teaching.

**Step 2 -- Near cutting position**

Define the cutting pose.

1. Specify the correct posture with [Axis Key]s for the manipulator to start cutting.
2. Press [ENTER]. Step 2 is registered.

| 0000 | NOP |
| 0001 | MOVJ VJ=25.00 |
| 0002 | MOVJ VJ=25.00 |
| 0003 | END |
Step 3 -- Cutting Start Position

Move to the cutting start position with the pose as shown in Step 2, and register the TOOLON instruction.

1. Change to medium speed by pressing [FAST] or [SLOW]. Medium speed: is displayed in the status area.

2. Move the manipulator to the cutting start position with [Axis Key]s. At this time, do not release the pose input in Step 2.

3. With the cursor located on the line number, press [SELECT].

4. The input buffer line appears. Move the cursor to the right to "VJ=25.00," which shows the speed. While pressing [SHIFT] simultaneously, move the cursor up and down (to higher and lower play speeds) until the desired speed is specified. Set the speed to 12.50%.

5. Press [ENTER]. Step 3 is registered.

6. Press [2/TOOL ON]. "TOOLON" is displayed in the input buffer line.

Press [ENTER]. The TOOLON instruction is registered.
9 General Purpose Application
9.1 Simplified Teaching and Playback

Step 4 -- Cutting End Position
Define the cutting end position.

1. Move the manipulator to the cutting end position with [Axis Key]s. It is necessary to choose a direction in which the treatment device and the tools do not interfere when the manipulator moves, and teach that position.

2. Set linear interpolation (MOV L) by pressing [MOTION TYPE].

3. With the cursor located on the line number, press [SELECT].

4. The input buffer line appears. Move the cursor to the right to “V=11.0,” which shows the speed. Press [SELECT] to enable the input of numbers. Then, input the desired value of 50.0mm/s with [Numeric Key]s and press [ENTER].

5. Press [ENTER]. Step 4 is registered.

6. Press [/TOOL OF]. “TOOLOF” is displayed in the input buffer line.

7. Press [ENTER]. The TOOLOF instruction is registered.
9.1.3.3 Confirmation of Cutting Operation (Speed Limitation Drive)

The speed limitation drive is executed to confirm the taught path. All the operations operate below the limitation speed during teach mode (250mm/s usually) in the speed limitation drive. If the taught speed is below the limitation speed, the operation is executed at the same speed as the teaching procedure.

1. Switch the mode switch on the programming pendant to “PLAY.”
2. Select {UTILITY} and {SETUP SPECIAL RUN}. The SPECIAL PLAY window appears.

3. Move the cursor to the “SPEED LIMIT” setting and press [SELECT]. The condition becomes “VALID” and the speed limit is turned ON.

- Cutting Execution
  Once the path has been determined, cutting is finally executed at actual speed. If the job is played back with the speed limitation drive disabled, cutting is executed at taught speed.
9.2.1 Function Keys

The function keys for tool control are assigned to [Numeric Key]s as described below.

- Registers the TOOLON instruction.
  - If [INTERLOCK] is pressed simultaneously, the TOOLON operation is executed.

- Registers the TOOLOF instruction.
  - If [INTERLOCK] is pressed simultaneously, the TOOLOFF operation is executed.

- Registers the CALL instruction for the reserved job TOOLONxx.

- Registers the CALL instruction for the reserved job TOOLOFxx.
9.2.2 Tool Control Settings

The following setting can be performed on the GENERAL DIAGNOSIS window.

1. Select (GENERAL) under the main menu.
2. Select (GENERAL DIAGNOSIS).
   - The GENERAL DIAGNOSIS window appears.
     - Select “CONT” to continue the work operation when the manipulator is restarted after it abort for any reason during the work operation. Select “STOP” to abort the work operation if the manipulator stops. When the manipulator is restarted, it moves without doing any work. Use the work start command to restart the work instruction.
3. Select the setting data of "WORKING ABORT PROCESS."
   - Each time [SELECT] is pressed, "CONT" and "STOP" is alternately displayed. The displaying state is the current setting.
9.2.3 Work Instructions

9.2.3.1 TOOLON/TOOLOF Instructions

1. These instructions are to perform TOOLON/TOOLOFF. The function keys are [TOOLON] and [TOOLOF].

1. Select {JOB} under the main menu.
2. Select {JOB}.
3. Press [TOOLON] or [TOOLOF].
   - The TOOLON or TOOLOF instruction is displayed in the input buffer line. Or press [INFORM LIST] to display the instruction box and select the TOOLON/TOOLOF instruction.
   
   TOOLON
   Turns ON the work instruction.
   Turns ON the work start command (system output relay #51530) and waits for the work start response (system input relay #41130). The next instruction is executed when the work response turns ON.
   The work start response relay turns ON immediately after the work start command is output.

   TOOLOF
   Turns OFF the work instruction.
   Turns ON the work end command (system output relay #51531) and waits for the work end response (system input relay #41131). The next instruction is executed when the work end response turns ON.
   The work end response relay turns ON immediately after the work end command is output. The work instruction is programmed to hold after the work start command turns ON and to turn OFF when the work end command turns ON.
   When the manipulator stops during the work operation, the work instruction turns OFF.
   When restarting, turn ON the work instruction when "WORKING ABORT PROCESS" is set to "CONT." Do not turn OFF the work instruction when "STOP" is set.

4. Press [INSERT].
5. Press [ENTER].
9.2.3.2 CALL Instruction

This instruction calls a reserved job TOOLONxx or TOOLOFxx. The function keys for registration are [TOOLON JOB] and [TOOLOF JOB].

1. Select {JOB} under the main menu.
2. Select (JOB).
3. Press [TOOLON JOB] or [TOOLOF JOB].
   – The CALL instruction is displayed in the input buffer line.

   ![CALL JOB:TOOLON]

4. Select the job name.
   – The JOB LIST window appears.
5. Press [SELECT].
   – The window for character input appears.
   The job name can now be changed. Modify the job name and press [ENTER].
6. Press [INSERT].
7. Press [ENTER].
9.2.3.3 WVON Instruction

This instruction starts the weaving motion. Specify conditions in the weaving condition file when registering the WVON instruction.

1. Select {JOB} under the main menu.
2. Select {JOB}.
3. Press [INFORM LIST].
4. Select the WVON instruction.
   – The WVON instruction is displayed in the input buffer line.
     
     WVON WEV#(1)

   – To register the instruction displayed in the input buffer line without editing, press [INSERT] and then press [ENTER].
5. Select the file number and edit.
   – The input line is displayed.

     Weaving_file_no.=

     WVON WEV#(2) ON

   – Input weaving file number using [Numeric Key]s and press [ENTER].
     (In the following example, 2 is entered.)

     WVON WEV#(2)
6. Press [INSERT].
7. Press [ENTER].

9.2.3.4 WVOF Instruction

This instruction ends the weaving motion.

1. Select {JOB} under the main menu.
2. Select {JOB}.
3. Press [INFORM LIST].
4. Select the WVOF instruction.
   – The WVOF instruction is displayed in the input buffer line.
     
     WVOF

5. Press [INSERT].
6. Press [ENTER].
9.3 Using Files

9.3.1 Weaving Basic Coordinate System

Weaving is performed based on the following coordinate system. This coordinate system is automatically generated according to the conditions described in a weaving condition file.

Wall Direction: Z-direction of the robot axis
Horizontal Direction: The direction of approach point from the wall
Direction of Travel: The direction in which the manipulator moves from the weaving start point to the end point

The approach point is a point indicated by a step immediately before the step where weaving starts.

Depending on the mounting and shape of the workpiece, a definition of the above coordinate system may not be sufficient to generate a weaving pattern. In that case, register the reference point REFP1 or REFP2. For details, refer to chapter 9.3.3.3 “Cases that Require the Registration of Reference Points” at page 9-32.
9.3.2 WEAVING CONDITION Window

(1) WEAVING COND NO. (1 to 255)
- Displays a weaving condition file number.

(2) MODE (Weave type)
- There are three weave type: single oscillation, triangle oscillation, and L-type oscillation. Each type can be specified with or without smoothing.

0 : Single oscillation
1 : Triangle oscillation
2 : L-type oscillation

(3) SPEED
- Specifies how the oscillation speed is defined.
  0: Defined by the frequency.
  1: Defined by the weaving time for each weaving section.
(4) FREQUENCY

- Specifies the weaving frequency if "SPEED (3)" is set to "0: FREQ."
  Note that the maximum frequency is determined by the amplitude as
  illustrated in the graph below. Specify a frequency within the
  allowable range. Note that the graph only indicates tentative values.

![Frequency Graph](image)

Maximum Frequencies for Different Amplitudes

(5) PATTERN

- If "MODE (2)" is set to "0: SINGL," the angle must be specified.

![Pattern Diagram](image)

"Mode 0" (Weave Type): Single oscillation

- If "MODE (2)" is set to "1: TRI" or "2: L", the following information on
  the triangle must be specified: vertical distance, horizontal distance,
  and angle.

![Pattern Diagram](image)

"Mode 0" (Weave Type): Triangle or L-type oscillation
9 General Purpose Application
9.3 Using Files

(6) ANGLE
– The oscillation angle as measured from the weld line.
– Range: from -90(deg.) to +90(deg)

(7) TIMER (Timer mode)
– As shown below, a single weaving period is divided into three or four sections. A timer count can be specified for pauses at a point (node) between sections. (The circled number indicates section number.)

Set one of the following timer modes:

0: Weaving stops but manipulator moves.
1: Manipulator pauses.

(8) TIMER (Timer count)
– If “Speed (3) is set to “1: MOVING TIME,” a timer count specified here determines the duration of a pause (weaving stop or manipulator pause) at a mode between two sections of (8).
9.3.3 Operation Method

9.3.3.1 Displaying a Weaving File

1. Select {ARC WELDING} under the main menu.
2. Select {WEAVING}.
3. Display the desired file number.
   - The weaving condition file can be displayed using [PAGE].
     Press [PAGE] to call the next file number.
     Press [SHIFT]+[PAGE] to call the previous file number.
     Press [PAGE] to input the desired file number, then press [ENTER].

9.3.3.2 Editing Condition Data

1. Select the item to be edited.
2. Input the value using [Numeric Key]s.

9.3.3.3 Cases that Require the Registration of Reference Points

The registration of the reference point REFP1 or REFP2 is not usually required. They are required only with a special workpiece condition, etc.

The REFP1, which defines the wall direction, is a point on the wall surface or its expansion plane. The REFP2, which defines the horizontal direction, is a point at the right or left side of the wall.

---

For information on registering REFP, refer to chapter 3.2.3.2 “Registering Reference Point Instructions” at page 3-18.
9 General Purpose Application  
9.3 Using Files

**Example 1**  REFP1 is registered because the wall direction is not parallel to the Z-axis of the robot coordinate.

Wall direction

Z-axis

![Example 1 Diagram]

<table>
<thead>
<tr>

9.3.3.4 Prohibiting Weaving

If the weaving instruction is registered during the check mode of the play mode or "TEST RUN" or FWD operation in the teach mode, weaving is executed as well as other move instructions. However, in some cases when weaving is not wanted because of a workpiece collides, etc., follow the procedure below to prohibit weaving.

9.3.3.5 Method to Prohibit Weaving in the Check Mode

1. Press [AREA].
2. Select {UTILITY}.
3. Select {SPECIAL PLAY}.
4. Select prohibit weaving during the check mode.
   - The SPECIAL PLAY window appears.
9.3.3.6 Method to Prohibit Weaving During a “TEST RUN” or FWD Operation

1. Press [AREA].
2. Select {UTILITY}.
3. Select {SPECIAL TEACH}.
4. Select prohibit weaving during the FWD/TEST RUN operation.
   – The SPECIAL TEACH window appears.

9.3.3.7 Prohibiting Weaving By Means of a System Input Signal

The system input signal #40047 is used.

The system input signal can prohibit weaving at any time during a play operation, regardless of whether or not it is in a check mode.
### 9.4 Table of Work Instructions

- `< >` indicates alpha-numerical data.
- If multiple items are shown in one additional item section, select one.

![Key Diagram](image-url)
10.1.2 HAND Instruction

10.1.2.1 Function

The following instructions open and close the grippers mounted on the manipulator. They correspond to single-, double-, and triple-position solenoids. Up to four grippers can be controlled for each manipulator. The following sequences are available for solenoid signal control, according to the valve selected.

- **SP (single-solenoid)**
  The HAND instruction turns ON/OFF the gripper valve (x-1). The inverse signal is output to the gripper valve (x-2). Connect the valve to either one when used in a single-solenoid.

- **2P (double-solenoid)**
  The HAND instruction turns ON/OFF the gripper valve (x-1). The inverse signal is output to the gripper valve (x-2).

- **3P (triple-position solenoid)**
  Adding ALL to the HAND instruction allows both gripper valve (x-1) and gripper valve (x-2) to be turned ON/OFF simultaneously. Functions as a double-solenoid if ALL is not added to the HAND instruction.

<table>
<thead>
<tr>

</table>

10.1.2.2 Instruction and Additional Items

- **(1) Device Number (#1 or #2)**
  Sets when two manipulators are used for handling.

- **(2) Gripper Number (1 to 4)**
  Required.
10 Handling Application
10.1 Outlines

(3) **Gripper Output Status (ON/OFF)**
Required.
Select ON or OFF.

(4) **Valve Simultaneous Control (ALL)**
Adds to turn valves 1 and 2 ON or OFF simultaneously.

10.1.3 **HSEN (Gripper Sensor) Instruction**

10.1.3.1 **Function**
Confirm that the gripper sensor is in the specified status. If the gripper sensor is in the specified status, the result is $B014^*$ and the next instruction is executed. If a timer is specified, the instruction waits for the specified time (including infinity) to be input.

10.1.3.2 **Instruction and Additional Items**

<table>
<thead>
<tr>
<th>HSEN</th>
<th>#1</th>
<th>1</th>
<th>OFF</th>
<th>T=10.00</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(1)</td>
<td>(2)</td>
<td>(3)</td>
<td>(4)</td>
</tr>
</tbody>
</table>

(1) **Device Number (#1 or #2)**
Set when two manipulators are used for handling.

(2) **Sensor Number (1 to 8)**
Required.

(3) **Sensor Input Status (ON/OFF)**
Required.
Select ON or OFF.

(4) **Signal waiting time (T=0.01 to 655.35sec)**
FOREVER: Unlimited time
If omitted, T=0.

$B014$: Variable for execution result
Sets the execution result.
0: is set when the instruction is ended before the timer is over.
1: is set when the instruction is ended when the timer is over.
10 Handling Application
10.1 Outlines

10.1.3.3 Examples

Waits until sensor 1 turns ON (OFF). At completion, the result (1: gripper sensor 1 is ON (OFF)) is set in $B014.

Checks whether sensor 1 is turned ON at completion of HSEN instruction. The result (0: gripper sensor 1 is OFF, 1: gripper sensor 1 is ON) is set in $B014.

Waits 10 seconds for gripper sensor 1 to turn ON. Sets the result 1 (gripper sensor 1 is ON) in $B014 if the sensor input turns ON. Sets the result 0 (gripper sensor 1 is OFF) if the sensor does not turn ON after 10 seconds.

To observe the $B014 contents with an IF statement, use the GETS instruction to read the contents to a B variable.

10.1.4 Handling Window

1. Select {ROBOT} under the main menu.
2. Select {HANDLING DIAG}.
   – The HANDLING window appears.

3. Select “F1 KEY ALLOCATION” or “F2 KEY ALLOCATION,” and then edit.
   – The selection dialog box appears.
– If a signal from {HAND1} to {HAND4} is selected, the key allocation to the corresponding gripper valve signal can be modified. (In the following example, {HAND3} is selected in the "F2 KEY ALLOCATION."

When HAND3 is set for the "F2 KEY ALLOCATION"

<table>
<thead>
<tr>
<th>F1 KEY ALLOCATION</th>
<th>F2 KEY ALLOCATION</th>
<th>TOOLSHOCK SENSOR FUNC</th>
<th>TOOLSHOCK SENSOR INPUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOT USED</td>
<td>NOT USED</td>
<td>NOT TEST</td>
<td>NOT TEST</td>
</tr>
</tbody>
</table>

– When {USER OUT} is selected, the output number of user signal is asked.

<table>
<thead>
<tr>
<th>F1 KEY ALLOCATION</th>
<th>F2 KEY ALLOCATION</th>
<th>TOOLSHOCK SENSOR FUNC</th>
<th>TOOLSHOCK SENSOR INPUT</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOT USED</td>
<td>NOT USED</td>
<td>NOT TEST</td>
<td>NOT TEST</td>
</tr>
</tbody>
</table>

– Input desired number with [Numeric Key]s and press [ENTER] to change the allocation of user output signal.

An error message is displayed if the input number lies outside the designated range. Press [CANCEL] to cancel the modification of the key allocation.

If [f•1] or [f•2] and [INTERLOCK] are pressed simultaneously, the output of the designated signal is switched ON and OFF.

The "-1" gripper valve signals can be allocated to [f•1] and the "-2" gripper valve signals can be allocated to [f•2].

4. Select “SHOCK SENSOR FUNC” or “SHOCK SENSOR INPUT,” and then edit.

– If “SHOCK SENSOR FUNC” is selected, “USED” and “NOT USED” are alternately displayed.

If “SHOCK SENSOR INPUT” is selected, “VALID” and “INVALID” are alternately displayed.

The displayed state is the current setting.
10.1.5 Shock Sensor Function

If “SHOCK SENSOR FUNC” is “USED” in the HANDLING window, the shock sensor is enabled. When the shock sensor does not exist, set “NOT USED.”

10.1.6 Shock Sensor Input Signal

- **Function**
  When this signal turns OFF, “SHOCK SENSOR WORKING” is displayed on the programming pendant and the system enters HOLD status.

- **Signal Condition**
  The signal is normally an ON (NC) signal.

- **How to Use the Signal**
  Input the shock sensor output signal to #20026 (CN309-B2 of YIU01).

10.1.7 Shock Sensor Input Reset

- **Function**
  This function resets the HOLD status and enables the axis operation and [FWD]/[BWD] operations in order to allow the manipulator to be retracted after shock sensor operation.
  Set the function on the HANDLING window. If “SHOCK SENSOR FUNC” is “USED” and “SHOCK SENSOR INPUT” is “INVALID” in the teach mode, “SHOCK SENSOR INP. RELEASING” is displayed and the input is disabled. The input is enabled if “SHOCK SENSOR INPUT” is “VALID.”

Refer to chapter 10.1.4 “Handling Window” at page 10-4 for details about using this function.

10.1.8 Low Air Pressure Input Signal

- **Function**
  If the air pressure drops, this signal turns ON and triggers a user alarm (system section) in the play mode. In the teach mode, the message “AIR PRESSURE LOWERING” is displayed.

- **Signal Condition**
  The signal is normally an OFF (NO) signal.

- **How to Use the Signal**
  Input the low air pressure signal to #20027 (CN309-A2 of YIU01).
  The alarm can be reset by turning OFF the signal and reset the alarm.
  To perform axis operations while the air pressure is low, set to teach mode and reset the alarm. The above message is displayed, but manipulator operations are possible.
10 Handling Application
10.2 Registering Instructions

10.2 Registering Instructions

10.2.1 HAND Instruction

This instruction turns ON/OFF the gripper valve signal and controls the tool.

1. Select {JOB} under the main menu.
2. Select {JOB}.
3. Press [TOOL 1 ON/OFF] or [TOOL 2 ON/OFF].
   - “HAND 1 ON” is displayed if [TOOL 1 ON/OFF] is pressed; “HAND 2 ON” is displayed if [TOOL 2 ON/OFF] is pressed in the input buffer line.
   If “HAND” is selected after pressing [INFORM LIST], “HAND 1 ON” is displayed.

   ![HAND 1 ON](image)

   - To register the instruction shown in the input buffer line without editing, press [INSERT] and then press [ENTER].
4. Select the gripper number and edit.
   - The input line is displayed.

   ![Tool no: HAND ON](image)

   - Input the gripper number with [Numeric Keys], and press [ENTER].

   ![HAND ON](image)

5. Select the gripper output status and edit.
   - If the UP or DOWN ARROW cursor is pressed together with [SHIFT], “ON” and “OFF” are alternately displayed.

   ![HAND 1 OFF](image)

   - If no settings are to be made for other additional items, press [INSERT] and then press [ENTER]. The HAND instruction is registered.
6. Edit the valve simultaneous control.
   – If inserting a valve simultaneous control (to make the gripper valve 1 output same as the valve 2 output), select “HAND.”

   ![HAND OFF]

   – The DETAIL EDIT window appears. Select “VALVE SIM CTRL.”

   ![Detail Edit Window]

   – The selection dialog box appears. Select “ALL.” The data of “VALVE SIM CTRL” items change to the “ALL” and the “ALL” tag is added to the input buffer data.

   ![Selection Dialog Box]

   – Press [ENTER] to display the JOB CONTENT window.

7. Press [INSERT].
8. Press [ENTER].
10.2.2 HSEN Instruction

This instruction monitors the various inputs used for handling and outputs the monitor result as a variable.

1. Select {JOB} under the main menu.
2. Select {JOB}.
3. Press [INFORM LIST].
4. Select the HSEN instruction.
   – The HSEN instruction is displayed in the input buffer line.
   
   ![HSEN display](image)

   – To register the instruction shown in input buffer line without editing, press [INSERT] and then press [ENTER].

5. Select the sensor number and edit.
   – The input line is displayed.
   
   ![Sensor number display](image)

   – Input the sensor number with [Numeric Key]s, and press [ENTER].

6. Select the sensor input status and edit.
   – If the UP or DOWN ARROW cursor is pressed together with [SHIFT], “ON” and “OFF” are alternately displayed.
   
   ![HSEN ON/OFF](image)

   – If no settings are to be made for other additional items, press [INSERT] and then press [ENTER]. The HSEN instruction is registered.

7. Edit the signal waiting time.
   – If inserting a signal waiting time, select “HSEN.”
   
   ![HSEN 1 OFF](image)

   The DETAIL EDIT window appears.
10 Handling Application
10.2 Registering Instructions

– Select "UNUSED."
  The selection dialog box appears.

– Select "T= ."

To make the (controller/hand/robot) to wait indefinitely, select "FOREVER."

– The data of "WAIT TIME" item changes to the "T= " and the number item is displayed to the right of that.
- Select the number item.
- The input line appears. Type the number with [Numeric Key]s.

![Image of the input line](image1.png)

- Press [ENTER] to display the number value input into the input buffer line.

![Image of the input line with entered value](image2.png)

- Press [ENTER] to display the JOB CONTENT window.

8. Press [INSERT].
9. Press [ENTER].

## 11.1 Move Instructions

<table>
<thead>
<tr>
<th>SPEED</th>
<th>Function</th>
<th>Additional Item</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Sets play speed.</td>
<td>VJ=&lt;joint speed&gt;, V=&lt;TCP speed&gt;, VR=&lt;play speed of the posture&gt;, VE=&lt;play speed of external axis&gt;</td>
<td>SPEED VJ=50.00</td>
</tr>
</tbody>
</table>

### CAUTION

When start IMOV instruction again after IMOV instruction was aborted due to execute the following operations, the manipulator moves the added values, which is set anew from the aborted position, in the linear interpolation. The values become greater than the set added value. Please do not execute the IMOV instruction when changing move distance by the abort causes a problem.

- External servo OFF signal 2 (#40066)
- Turning OFF the servo power due to alarm occurring
- Enable signal
- Mode switch
- Enable switch
### 11.2 I/O Instructions

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DOUT</strong></td>
<td>Turns the external output signals ON and OFF.</td>
</tr>
<tr>
<td><strong>Additional Item</strong></td>

</tr>
</tbody>
</table>
### WAIT

**Function**
Waits until the external input signal status matches the specified status.

<table>
<thead>
<tr>
<th>Additional Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IN# (&lt;input number&gt;), IGH# (&lt;input group number&gt;), IG# (&lt;input group number&gt;), OT# (&lt;user output number&gt;), OGH# (&lt;output group number&gt;), SIN# (&lt;system input number&gt;), SOUT# (&lt;system output number&gt;)</td>
<td>B&lt;variable number&gt;</td>
</tr>
<tr>
<td>T=&lt;time (seconds)&gt;</td>
<td>0.01 to 655.35 s</td>
</tr>
</tbody>
</table>

**Example**

WAIT IN# (12)=ON T=10.00
WAIT IN# (12)=B002

### AOUT

**Function**
Outputs the specified voltage to the general-purpose analog output port.

<table>
<thead>
<tr>
<th>Additional Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO# (&lt;output port number&gt;)</td>
<td>&lt;output voltage(V)&gt;</td>
</tr>
<tr>
<td>AO# (&lt;output port number&gt;)</td>
<td>-14.0 to 14.0 V</td>
</tr>
</tbody>
</table>

**Example**

AOUT AO# (2) 12.7

### ARATION

**Function**
Starts the analog output corresponding to the speed.

<table>
<thead>
<tr>
<th>Additional Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO#(&lt;output port number&gt;)</td>
<td>BV = &lt;basic voltage&gt;</td>
</tr>
<tr>
<td>AO#(&lt;output port number&gt;)</td>
<td>V = &lt;basic speed&gt;</td>
</tr>
<tr>
<td>AO#(&lt;output port number&gt;)</td>
<td>OFV = &lt;offset voltage&gt;</td>
</tr>
<tr>
<td>BV = &lt;basic voltage&gt;</td>
<td>0.1 to 1500.0 mm/s</td>
</tr>
<tr>
<td>V = &lt;basic speed&gt;</td>
<td>1 to 9000 cm/min</td>
</tr>
<tr>
<td>OFV = &lt;offset voltage&gt;</td>
<td>-14.00 to 14.00 V</td>
</tr>
</tbody>
</table>

**Example**

ARATION AO#(1) BV=10.00 V=200.0 OFV=2.00

### ARATIF

**Function**
Ends the analog output corresponding to the speed.

<table>
<thead>
<tr>
<th>Additional Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO#(&lt;output port number&gt;)</td>
<td>1 to 40</td>
</tr>
</tbody>
</table>

**Example**

ARATIF AO#(1)
### 11.3 Control Instructions

#### JUMP

<table>
<thead>
<tr>
<th>Function</th>
<th>Jumps to the specified label or job.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Additional Item</strong></td>
<td>* &lt;label character string&gt;, JOB:&lt;job name&gt;, LABEL:&lt;label elements&gt;, IG# (&lt;input group number&gt;), B&lt;variable number&gt;, I&lt;variable number&gt;, D&lt;variable number&gt;, S&lt;variable number&gt;, UF# (user coordinates number)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>JUMP JOB:TEST1 IF IN#(14)=OFF</td>
</tr>
<tr>
<td>* (label)</td>
<td>Indicates a jump destination.</td>
</tr>
<tr>
<td><strong>Additional Item</strong></td>
<td>&lt;jump destination&gt; 8 characters or less</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>*123</td>
</tr>
</tbody>
</table>

#### CALL

<table>
<thead>
<tr>
<th>Function</th>
<th>Calls the specified job.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Additional Item</strong></td>
<td>JOB:&lt;job name&gt;, IG# (&lt;input group number&gt;), B&lt;variable number&gt;, I&lt;variable number&gt;, D&lt;variable number&gt;, S&lt;variable number&gt;, ARGF&lt;argument 1&gt;, ARGF&lt;argument 2&gt;, ARGF&lt;argument 3&gt;, ARGF&lt;argument 4&gt;, ARGF&lt;argument 5&gt;, ARGF&lt;argument 6&gt;, ARGF&lt;argument 7&gt;, ARGF&lt;argument 8&gt;, UF# (user coordinates number)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>CALL JOB:TEST1 IF IN# (24)=ON CALL IG#(2) (The job is called by the patterns of input signal. In this example, Job 0 cannot be called.)</td>
</tr>
</tbody>
</table>

#### RET

<table>
<thead>
<tr>
<th>Function</th>
<th>Returns to the call source job.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Additional Item</strong></td>
<td>B&lt;variable number&gt;, I&lt;variable number&gt;, D&lt;variable number&gt;, R&lt;variable number&gt;, S&lt;variable number&gt;, Constant, String</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>RET IF IN#(12)=OFF</td>
</tr>
</tbody>
</table>

#### END

<table>
<thead>
<tr>
<th>Function</th>
<th>Declares the end of a job.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Additional Item</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>END</td>
</tr>
</tbody>
</table>

---

11-6
### Table of Basic Instructions

#### 11.3 Control Instructions

<table>
<thead>
<tr>
<th>Instruction</th>
<th>Function</th>
<th>Additional Item</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NOP</strong></td>
<td>No operation.</td>
<td></td>
<td>NOP</td>
</tr>
<tr>
<td><strong>TIMER</strong></td>
<td>Stops for the specified time.</td>
<td>T=(&lt;time (seconds)&gt;) 0.01 to 655.35 s</td>
<td>TIMER T=12.50</td>
</tr>
<tr>
<td><strong>IF</strong></td>
<td>Evaluates the specified condition and makes a judgment accordingly. Described after an instruction that specifies a certain action. Format: (&lt;item1&gt;=,\le,\ge,\lt,\gt,\lt\le,\gt\ge\le,\gt\ge,\lt\ge,\gt\le\lt,\gt\gt\lt\ge,\gt\le\le,\gt\ge\ge,\lt\lt) (&lt;item2&gt;)</td>
<td>(&lt;item1&gt;) (&lt;item2&gt;)</td>
<td>JUMP *12 IF IN#(12)=OFF</td>
</tr>
<tr>
<td><strong>UNTIL</strong></td>
<td>Monitors the specified input signal during an action and stops the action when the specified signal status is observed. Described after an instruction that specifies a certain action.</td>
<td>IN# (&lt;input number&gt;) (&lt;status&gt;)</td>
<td>MOV L V=300 UNTIL IN#(10)=ON</td>
</tr>
<tr>
<td><strong>PAUSE</strong></td>
<td>Instructs a pause.</td>
<td>IF statement</td>
<td>PAUSE IF IN#(12)=OFF</td>
</tr>
</tbody>
</table>
| **COMMENT**| Displays a comment. | \(<comment>\) 32 characters or less | "Draws 100mm size square."

#### CWAIT

Waits for execution of the instruction on the next line. Used with the NWAIT tag which is an additional item of a move instruction.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>MOVL V=100 NWAIT DOUT OT#(1) ON CWAIT DOUT OT#(1) OFF MOVL V=100</td>
</tr>
</tbody>
</table>

#### ADVINIT

Initializes the prereading instruction processing. Used to adjust the access timing for variable data.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADVINIT</td>
</tr>
</tbody>
</table>

#### ADVSTOP

Stops the prereading instruction processing. Used to adjust the access timing for variable data.

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>ADVINIT</td>
</tr>
</tbody>
</table>
### 11.4 Shift Instructions

**SFTON**

<table>
<thead>
<tr>
<th>Function</th>
<th>Starts a shift operation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional Item</td>
<td>P&lt;variable number&gt;,</td>
</tr>
<tr>
<td></td>
<td>BP&lt;variable number&gt;,</td>
</tr>
<tr>
<td></td>
<td>EX&lt;variable number&gt;,</td>
</tr>
<tr>
<td></td>
<td>BF,RF,TF, UF#(&lt;user number&gt;)</td>
</tr>
<tr>
<td>BF:</td>
<td>base coordinates</td>
</tr>
<tr>
<td>RF:</td>
<td>robot coordinates</td>
</tr>
<tr>
<td>TF:</td>
<td>tool coordinates</td>
</tr>
<tr>
<td>UF:</td>
<td>user coordinates</td>
</tr>
</tbody>
</table>

**Example**

SFTON P001 UF#(1)

**SFTOF**

<table>
<thead>
<tr>
<th>Function</th>
<th>Stops a shift operation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional Item</td>
<td></td>
</tr>
<tr>
<td>Example</td>
<td>SFTOF</td>
</tr>
</tbody>
</table>

**MSHIFT**

<table>
<thead>
<tr>
<th>Function</th>
<th>Obtains the shift value in the specified coordinate system from Data 2 and 3, and stores the obtained element values in Data 1.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Format</td>
<td>MSHIFT &lt;Data1&gt;&lt;Coordinate&gt;&lt;Data2&gt;&lt;Data3&gt;</td>
</tr>
<tr>
<td>Additional Item</td>
<td>Data1 PX&lt;variable number&gt;</td>
</tr>
<tr>
<td>Coordinate</td>
<td>BF,RF,TF, UF#(&lt;user coordinate number&gt;), MTF</td>
</tr>
<tr>
<td>BF:</td>
<td>base coordinates</td>
</tr>
<tr>
<td>RF:</td>
<td>robot coordinates</td>
</tr>
<tr>
<td>TF:</td>
<td>tool coordinates</td>
</tr>
<tr>
<td>UF:</td>
<td>user coordinates</td>
</tr>
<tr>
<td>MTF:</td>
<td>tool coordinates</td>
</tr>
<tr>
<td></td>
<td>for the master</td>
</tr>
</tbody>
</table>

**Example**

MSHIFT PX000 RF PX001 PX002
11.5 Operating Instructions

<table>
<thead>
<tr>
<th>ADD</th>
<th>Function</th>
<th>Adds Data1 and Data2, and stores the result in Data1. Format: ADD&lt;Data1&gt;&lt;Data2&gt;</th>

<td></td>
<td></td>
<td>Data1 must always be a variable.</td>
<td>DIV I012 I013 DIV P000 (3) 2 (Divide the Z-axis data by 2.)</td>
</tr>
</tbody>
</table>
| **INC**  | Increments the value of the specified variable by 1. |           |                | **Example**
|          |             |        |                | INC I043 |

### MUL Function
Multiplies Data1 by Data2, and stores the result in Data1.

- **Format**: MUL<Data1><Data2>
- **Data1**: Can be an element in a position variable. If omitted, all elements are specified.
- **Additional Item**: Data1 can be B<variable number>, I<variable number>, D<variable number>, R<variable number>, P<variable number><element number>, B<variable number><element number>, I<variable number><element number>, D<variable number><element number>, R<variable number><element number>, P<variable number><element number>, BP<variable number><element number>, EX<variable number><element number>.
- **Data2**: Constant, B<variable number>, I<variable number>, D<variable number>, R<variable number>.

### DIV Function
Divides Data1 by Data2, and stores the result in Data1.

- **Format**: DIV<Data1><Data2>
- **Data1**: Can be an element in a position variable. If omitted, all elements are specified.
- **Additional Item**: Data1 can be B<variable number>, I<variable number>, D<variable number>, R<variable number>, P<variable number><element number>, B<variable number><element number>, I<variable number><element number>, D<variable number><element number>, R<variable number><element number>, P<variable number><element number>, BP<variable number><element number>, EX<variable number><element number>.
- **Data2**: Constant, B<variable number>, I<variable number>, D<variable number>, R<variable number>.

### INC Function
Increments the value of the specified variable by 1.

- **Additional Item**: B<variable number>, I<variable number>, D<variable number>.
### DEC Function
Decrement the value of the specified variable by 1.

**Additional Item**
- B<variable number>
- I<variable number>
- D<variable number>

**Example**
DEC I043

### AND Function
Obtains the AND of Data1 and Data2, and stores the result in Data1.

**Format**
AND<Data1><Data2>

**Additional Item**
- Data1 B<variable number>
- Data2 B<variable number>, Constant

**Example**
AND B012 B020

### OR Function
Obtains the OR of Data1 and Data2, and stores the result in Data1.

**Format**
OR<Data1><Data2>

**Additional Item**
- Data1 B<variable number>
- Data2 B<variable number>, Constant

**Example**
OR B012 B020

### NOT Function
Obtains the NOT of Data2, and stores the result in Data1.

**Format**
NOT<Data1><Data2>

**Additional Item**
- Data1 B<variable number>
- Data2 B<variable number>, Constant

**Example**
NOT B012 B020

### XOR Function
Obtains the exclusive OR of Data1 and Data2, and stores the result in Data1.

**Format**
XOR<Data1><Data2>

**Additional Item**
- Data1 B<variable number>
- Data2 B<variable number>, Constant

**Example**
XOR B012 B020

### SET Function
Sets Data2 to Data1.

**Format**
SET<Data1><Data2>

**Additional Item**
- Data1 B<variable number>, I<variable number>, D<variable number>, R<variable number>, P<variable number>, S<variable number>, BP<variable number>, EX<variable number>
- Data2 Constant, B<variable number>, I<variable number>, D<variable number>, R<variable number>, EXPRESS

**Example**
SET I012 I020

</tr>
</thead>
<tbody>
<tr>
<td><strong>GETFILE</strong></td>
<td>Stores the contents data of a condition file in Data1. The contents data of a condition file to be obtained is specified by the element number.</td>
<td>Data1 D (&lt;\text{variable number}&gt;), Contents data of a condition file WEV#(&lt;condition file number&gt;)(&lt;element number&gt;)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>GETFILE D000 WEV#(1)(1)</td>
<td></td>
</tr>
</tbody>
</table>

#### **GETPOS**

Function: Stores the position data of Data2 (step number) in Data1.

<table>
<thead>
<tr>
<th>Additional Items</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data1 PX (&lt;\text{variable number}&gt;), Data2 STEP# (&lt;step number&gt;)</td>
<td></td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>GETPOS PX000 STEP#(1)</td>
</tr>
</tbody>
</table>

#### **VAL**

Function: Converts the numeric value of the character string (ASCII) of Data2 into the real number, and stores the result in Data1.

Format: VAL \(<\text{Data1}>\) <Data2> cardinal number

<table>
<thead>
<tr>
<th>Additional Items</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data1 B (&lt;\text{variable number}&gt;), I (&lt;\text{variable number}&gt;), D (&lt;\text{variable number}&gt;), R (&lt;\text{variable number}&gt;)</td>
<td>Data2 Character string, S (&lt;\text{variable number}&gt;), RADIX=&lt;\text{cardinal number}&gt;</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>VAL B000 “123”</td>
</tr>
</tbody>
</table>

#### **ASC**

Function: Obtains the character code of the first letter of the character string (ASCII) of Data2, and stores the result in Data1.

Format: ASC \(<\text{Data1}>\) <Data2>

<table>
<thead>
<tr>
<th>Additional Items</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data1 B (&lt;\text{variable number}&gt;)</td>
<td>Data2 Character string, S (&lt;\text{variable number}&gt;)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>ASC B000 “ABC”</td>
</tr>
</tbody>
</table>

#### **CHR$**

Function: Obtains the character (ASCII) with the character code of Data2, and stores the result in Data1.

Format: CHR$ \(<\text{Data1}>\) <Data2>

<table>
<thead>
<tr>
<th>Additional Items</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data1 S (&lt;\text{variable number}&gt;)</td>
<td>Data2 Constant, B (&lt;\text{variable number}&gt;)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>CHR$ S000 65</td>
</tr>
</tbody>
</table>

#### **MID$**

Function: Obtains the character string (ASCII) of any length (Data 3, 4) from the character string (ASCII) of Data2, and stores the result in Data1.

Format: MID$ <Data1> <Data2> <Data3> <Data4>

<table>
<thead>
<tr>
<th>Additional Items</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Data1 S (&lt;\text{variable number}&gt;)</td>
<td>Data2 Character string, S (&lt;\text{variable number}&gt;)</td>
</tr>
<tr>
<td>Data3 Constant, B (&lt;\text{variable number}&gt;), I (&lt;\text{variable number}&gt;), D (&lt;\text{variable number}&gt;)</td>
<td>Data4 Constant, B (&lt;\text{variable number}&gt;), I (&lt;\text{variable number}&gt;), D (&lt;\text{variable number}&gt;)</td>
</tr>
<tr>
<td><strong>Example</strong></td>
<td>MID$ S000 “123ABC456” 4 3</td>
</tr>
<tr>
<td>Function</td>
<td>Additional Item</td>
</tr>
<tr>
<td>----------</td>
<td>----------------</td>
</tr>
<tr>
