Robotic Welding Solutions

A Legacy of Excellence

OVER 100 YEARS OF INNOVATION

Yaskawa Motoman has created robotic arc welding solutions that seamlessly integrate robots, welding equipment, servo-controlled positioners, workcell safeguarding and software.

The result: turnkey and customized solutions that deliver unmatched speed, accuracy, reliability and versatility for customers spanning diverse industries.

Components for Every Application and Industry

Our unique approach to arc welding solutions is founded on two core principles: exceptional design and optimal configuration. We start with an industry-leading range of workcells, robots and positioners, all engineered for maximum performance, and regularly enhanced and expanded based on real customer results. Our specialists then work with customers to determine the best combination of components for their specific needs, from analyzing parts and processes, to considering details such as inertia characteristics, motor torque curve and bearing loading parameters for positioners.

The combination of best-in-class offerings and expert consultation enables us to deliver outstanding solutions for companies of all sizes with remarkably diverse application needs. Whether you’re producing small or large parts, prefer a process-to-part or part-to-process approach, or even need multiple robot control, Yaskawa Motoman has the solution.
Proven Impact

Robotic welding solutions from Yaskawa Motoman have delivered game-changing results for clients of all sizes. We’ve enabled Tier 1 automotive suppliers to produce high-volume parts with unprecedented speed and efficiency. We’ve helped construction machinery manufacturers create their heaviest-duty parts with ease. And, we’ve equipped job shops with flexible, cost-effective solutions that adapt easily to shifting market needs. Whatever your requirements or challenges, we can configure the ideal solution.

Engineered to Perfection

Our experienced application engineers specialize in conceptualizing advanced robotic welding solutions in innovative, uniquely effective ways. By combining ISO 9001-2000 certified project processes, advanced 3D modeling software and proprietary off-line simulation tools we ensure well-executed projects. In addition, critical components such as system safeguarding, application equipment and programming are integrated at every stage. In most cases, a standard ArcWorld® workcell is a perfect fit. If not, we can provide options such as modified workcells or custom solutions from our Automation Group or a qualified integration partner.

Best-in-Class, Across the Board

Yaskawa Motoman positioners are designed for welding, built in the U.S. and life-tested for reliable performance. Our industry-leading high-speed robots include multiple payload, extended-reach and ultra-maneuverable seven-axis models for arc and spot welding. Innovative process features, such as a thru-arm torch and an integrated spot harness, provide improved cycle time and reduced downtime. Our advanced controller includes menu-driven welding software, digital weld interfaces and coordinated motion, as well as managing up to eight robots with a single controller and programming pendant.

Beyond our own components, we partner with leading companies to offer power sources, torches, spot guns and other key elements, creating solutions that are world-class from end to end.

Committed to Customer Satisfaction

All Yaskawa Motoman solutions are backed by our unwavering commitment to provide exceptional customer service and to ensure your complete satisfaction. With Yaskawa Motoman, you can depend on unmatched quality, integrity and timely service, including 24/7 technical phone support from associates with an average of 15 years of robotics experience. Coupled with regional service technicians throughout the Americas, and support offerings to maximize robot productivity and longevity, Yaskawa Motoman solutions deliver both world-class performance and true peace of mind.

Small Footprint, Big Impact

These efficient ArcWorld workcells deliver powerful performance in a compact package. These mid-range workcells feature reduced floorspace and are ideal for low- to medium-volume fabrication, such as job shop and automotive component applications.
Overview

- Efficient, repetitive high-mix production
- Designed to handle small- to medium-sized parts
- Small footprint for efficient use of space
- Pre-assembled on a common base for quick setup and relocation
- Six- or seven-axis robots for maximum flexibility
- One part station for larger part size or two part stations for higher productivity
- Stationary table for lower cost or part positioner for greater flexibility
- Easy access to components for simplified maintenance and fast service

**AWC-30**

Basic workcell, low-volume fabrication.

- Pneumatic-operated door guard for operator safeguarding
- Full-size AR1440 robot for greater part coverage
- Welding table for customized ergonomic part fixtures

Part Positioning: Fixed

**AW50 | AW52 | AW50S | AW52S**

Mid-range workcell, low- to medium-volume fabrication.

- Automotive-grade powered roll-up door for high-speed operation
- Power supplies and controller are mounted on sub-base which can be pulled out for servicing access
- “S” models feature one or two headstocks, allowing for part positioning during welding to increase efficiency and productivity
- High productivity without increased footprint or integration complexity

Part Positioning: Fixed or MH1185

**Time Saving Options**

Maximize the efficiency of your robotic weld cell with our time and money saving options. Tip change boxes enable safe torch maintenance between cycles without entering the cell. Multicolored light beacons signal cell status that is visible to anyone on your manufacturing floor. Low wire and gas flow sensors prevent scrapped parts due to bad or incomplete welds. A secondary enabling switch allows an additional user to safely enter the work area while teaching the robot. All of these valuable options are designed to work seamlessly in your new cell without expensive additional integration.
Medium Production Workcells

Space-saving cell designs that feature dual stations for higher productivity

Versatility that Gets the Job Done

With more robust capabilities than our compact ArcWorld workcells, these models are designed to be versatile workhorses that can deliver whatever your application demands. Whether you need dependable production of small- to medium-sized parts, or affordable wire-to-weld solutions for medium-volume welding applications, these proven models are a perfect choice.
STANDARD, PRE-ENGINEERED ARC WELDING SOLUTIONS

Overview

- Space efficient, two-station workcells for higher productivity
- Designed to handle small- to medium-sized parts
- Pre-assembled on a common base for quick setup and relocation
- Six- or seven-axis robots for maximum flexibility
- Robust positioning equipment for higher volume automotive production

AW200 | AW500

Affordable wire-to-weld solutions for small- to medium-size parts produced at medium to high volumes.

- Cost- and space-efficient workcell for contoured parts less than one meter long
- Electric door guard provides rapid operation with torque limited for safety
- Two stationary workstations, a centrally located operator station and a large work area enable optimal flexibility and efficiency
- Workstations can be tooled for different parts or can be used for sequential operations
- High robot utilization and no positioner index time contribute to optimal productivity

Part Positioning: Fixed or MHT185

AW1000 | AW1200

Designed for light- to medium-volume production.

- High-speed servo turntable with multiple payload and tabletop options
- Functional Safety Unit (FSU) with L-shaped light curtains for enhanced safety
- Available with one or two AR1440 robots for double productivity
- Optional fixture plates for quick change tooling

Part Positioning: MSR-series (355, 655, 1,055 kg payload capacities | 1,524, 1,828 mm tabletop diameters)

Common Mounting Platform

The common controller assembly, featured on each ArcWorld, keeps all components easily accessible for setup or maintenance, and maintains familiarity from one ArcWorld model to another. Designed with a compact footprint on a portable base, this assembly includes the robot controllers, power and controls enclosures, welding power supplies, transformer, and other accessories.
Power to Perform

When your application demands higher performance at peak volumes, the ArcWorld 6000 family steps up to the challenge. These popular solutions feature an industry-leading blend of flexible configurations, space efficiency and high-performance positioner technology.
STANDARD, PRE-ENGINEERED ARC WELDING SOLUTIONS

Overview

- Ferris-wheel-style positioner is most space-efficient method to index long parts
- Rapid station switching index times (3 to 5 seconds) for optimal throughput
- Various workcell configurations, including multiple robots and extended-reach options for maximum span width flexibility
- Multiple positioner payload capacities and spans with two profile configurations
- Common cell base provides elevated platform for safe programming environment and protection of routed cables

- Functional Safety Unit (FSU) prevents load station from moving when loading and allows axis jogging from operator station
- Manual jog capability for ergonomic part loading or part tacking
- Optional slip rings with air and DeviceNet or Ethernet communication to automated fixturing for longer cable life on rotating tools
- Integrated weld grounds with high-amperage capacity for multiple robots

AW6000 | AW6200 | AW6300

High capacity positioner for heavy parts.

- Locking pins on robot and load station arms to prevent motion of part being welded while heavy parts are hoisted onto second load station
- The RM2-755 positioner features a sealed drive that eliminates most maintenance needs while expanding the life of the positioner
- The RM2-1255 positioner incorporates an easy-to-fill automatic lubricating device on the heavy-duty drive
- Our standard ferris wheel positioners offer tooling diameters up to 1,300 mm and spans up to 3 m for part flexibility and optimized cycle time
- Higher capacity positioners available for larger parts

Part Positioning: RM2-series (755, 1,255 kg payload capacities)

Multiple Robot Control

The YRC1000, Yaskawa Motoman’s patented multiple robot controller, allows coordination of up to eight robots (or 72 axes) using a single controller. This results in exceptional application flexibility, HyperProductivity® and lower integration costs. Controller modules reduce cost by eliminating processors and teach pendants for multiple robots. Integration cost is reduced due to a single control point for safety and PLC connections. FSU is included with single or multiple robot workcells.
When it comes to large parts (up to five meters and 6,300 kilograms) and heavy-deposition welding, only a truly heavy-duty solution will suffice. Our large ArcWorld workcells deliver maximum power for performance on a whole new scale, without sacrificing safety features and ease of integration that characterize our smaller workcells.

Overview
- Multiple positioners and robot options combine to deliver a modular solution ideal for heavy transportation, agriculture and construction equipment
- Opposing workstations take full advantage of robot reach and allow continuous welding during part loading
- Supports a variety of part spans (2-, 3-, 4-, 5-meter) with extended reach or multiple robot configurations
- Single-station configuration or “blank” stations without positioner(s) for customer-supplied tool
- MotoMount™ fixture mounting system eliminates laser or transit alignment procedures for fast positioner setup and improved equipment life
- Common equipment base with wire ways eases setup and provides cable management

AW2000 | AW2200
Designed for larger, heavier part production.
- Wire mesh safety fencing or solid panels for perimeter guarding
- Push-button operator station with manual job switch and 4-digit thumbwheel switch
- Coordinated motion software simplifies teaching of circumferential welds around contoured parts
- Optional light beacon, touch screen operator HMI and inside light curtains

Part Positioning: MHT-series (1,075, 3,000, 6,300 kg maximum payload)

Total Safety Environment
ArcWorld solutions are designed to comply with the ANSI/RIA R15.06-2012 standard. Our total safety environment features complete barrier guarding, dual-channel E-Stop functionality, tamper-resistant interlocks, single-point operator control, control-reliable integrated Functional Safety Unit (FSU), interlocked access door(s), arc flash protection and dual-channel light curtains for optimal safeguarding and peace of mind.
Modified Workcells
Variations of standard workcells to meet customer requirements

Overview

- Innovative solutions designed for a specific customer, part or set of requirements at a cost-effective price
- Multiple robots can be positioned to minimize weld and cycle time, maximize output and reduce floorspace
- HyperProductivity includes the industry’s fastest multiple robot control, high-speed positioners and leading-edge process technology
- Ergonomic configurations combine optimum load and program heights, multi-station part positioning and menu-driven weld interfaces to make the best use of employee time and effort
- Material handling robots can be integrated into arc welding workcells for improved ergonomics and productivity

**AWIV-4000 | AWIV-4200 | AWIV-4300 | AWIV-6400**

High-performance workcell with high-speed positioner.

- Double-ended headstock/tailstock positioners boost efficiency and productivity with part positioning on two stations simultaneously
- Coordinated motion provides the ability for the robot to weld contoured parts that are turning on the positioner

**Part Positioning:** MSR2S (500, 750 kg payload capacities), RM2-series

**AWV-6400**

Space-saving integrated overhead robot mounting structure.

- Ideal ergonomics with a single load/unload point, open access for programming and open rear floorspace for automatic unloading
- Multiple robot control provides coordination of robots and positioner axes from single teach pendant

**Part Positioning:** RM2 (1,555, 2,355 kg payload capacities)

**Customized Solutions from Yaskawa Motoman’s Automation Group (AG)**

Offering solutions for a wide range of budgets, AG is responsible for designing, building, testing and installing fully-integrated, custom automation systems for arc, laser, plasma and spot welding applications. AG is your “one-stop-shop” for robots, fixtures, process expertise, controls, handling, safety, integration and installation.
Welding Robots

The World Leader in Robotic Welding

With over 400,000 robot units sold, Yaskawa is the world leader in global market share. There’s a reason that nearly a quarter of all robotic arc welding applications in the world feature Yaskawa robots. Building on more than a century of expertise, we continue to deliver groundbreaking innovations in automation and robotics, enabling exceptional results for our customers across all industries and applications.

F = Floor  W = Wall  C = Ceiling  S = Shelf
### Overview
- Yaskawa Motoman pioneered application-specific arc and spot welding robots to reduce process-related downtime.
- Unique, seven-axis robots enable maximum reach flexibility (including access under and around parts and within confined spaces), as well as reduced floorspace.
- Variety of robot payloads and reach to support welding application flexibility.
- Menu-driven welding software delivers maximum flexibility and optimal productivity, while ensuring high-quality output.
- Slim robot profile allows several arms to work in close proximity for low-risk, high-density applications, shortening production time and increasing efficiency.

### Arc Welding Robots
- Versatile robots can be floor-, wall- or ceiling-mounted, enhancing joint access.
- Patented torch cable provides long life for high-flex, thru-arm robot design.
- Double wrist support casting is stronger and allows symmetric access to weld joints.
- AR-series have higher payload capacity and larger thru-hole wrists, along with higher speeds and improved uptime over previous models.

### Spot Welding Robots
- Higher payload robots feature compact gas spring to reduce profile and allow higher-density robot spacing.
- Medium payload robots provide faster speeds and reduced footprint for integration into SpotWorld® solutions for Tier 1 production.
- Integrated spot harness provides process utilities, including weld power, water and air hoses, servo gun cabling, spare I/O and DeviceNet connection.

Options for a Perfect Fit

Application-specific robots maximize uptime with features to reduce application-related downtime. Yaskawa Motoman has optimized integration of welding equipment to leverage features from various suppliers in a simple-to-use format with robust performance. This allows the world’s best welding technology to be tailored to your application.

Spot Welding Packages

Yaskawa Motoman has unique robot models to optimize high-density robot placement in automotive body shops. Superior Advanced Robot Motion (A.R.M.®) control software maximizes the performance of robot and servo gun motion. Digital interfaces to spot timers allow programming from robot teach pendant.

- Integrated spot harness improves wrist flexibility and reduces downtime, eliminating cable management issues and delivering maximum productivity with low cost of ownership
- Servo-controlled spot guns with DC spot timers are synchronized for reduced cycle time and optimized welding and part throughput
- Numerous spot welding functions to take advantage of servo gun control, including wire thickness detection, multi-step pressure file and tip wear compensation
- Options to enhance performance include tip dressers, tip changers, water flow sensors, utility service disconnects and tip wear tools
Arc Welding Packages

- Miller, Lincoln, Fronius and other power source models with full-feature digital interfaces
- Air-cooled torch with X-, Y-, Z-compliant torch shock sensor (water-cooled option)
- Collision detection software to minimize torch impact absorbed by shock sensor
- Arm-mounted 4-roll wire feeder
- Optimized robot dress to manage weld cabling for long life
- Weld-in-Teach function for improved safety
- Teach pendant overlay with arc welding specific keys
- Built-in Ethernet communication with options for DeviceNet or analog interfaces

Digital Weld Interfaces

Yaskawa Motoman has high-level digital interfaces for major brands of power supplies. These interfaces share common features such as:

- One-key navigation between robot program and weld settings in the Arc Start File
- Graphic representation of weld sequence for start and end, including sloping parameters
- Standard weld functions such as arc retry or arc restart

These digital interfaces also support:

- Access to process libraries stored on the welder
- Display of live weld parameters on the pendant
- Password protection to safeguard process changes
- Control of power source arc monitoring (when equipped)

Sensing Technology

Adding sensors to robotic arc welding operations can improve precision, productivity and quality. Yaskawa Motoman offers a wide range of sensing technologies, ranging from cost-effective thru-wire touch sensors to cutting-edge laser and vision systems.

- **Thru-wire** touch-sensing enables cost-effective seam-finding and unrestricted joint access that is effective with all conductive metal.
- **AccuFast™** non-contact laser systems offer fast, accurate seam-finding that eliminates wire cutting and provides a cost-effective option between tactile and vision sensing solutions.
- **ComArc LV** thru-arc seam-tracking allows tracking while weaving and is compatible with multi-robot, multi-layer, and jigless configurations.
- **Laser finding and tracking** is ideal for varied materials and lighting conditions, as well as capturing joint gap data and adapting in real-time based on joint gap feedback.
- **MotoSight™** vision sensors combine user-friendly software and pendant interface programming with powerful capabilities, including fixture identification and error proofing.
Positioners

Built to Perform

Wide variety of positioners provide unmatched speed, accuracy, robustness and reliability. Using the same field-proven motor controls, they are manufactured to the same exacting standards as Yaskawa robots. We also lead in control technology with multi-tasking software that allows coordination between multiple robots, base axes and multi-axis positioners.

Rotary Turntables

- Low inertia tabletop available in two diameters; positioner drive unit is available without tabletop for custom tooling or different diameters
- Metal arc screen divider creates a safety barrier, protecting the operator from arc flash
- MSR-655 and MSR-1055 models can be used with endless rotation software for continuous rotating applications with multiple programmable stop locations
- Positioner options include fixture plates to support quick change tools, DeviceNet signal slip ring with air for fixture utilities, ground brush and multi-station switch kits for continuous rotation, hard stops for reciprocating applications with heavy payloads

**H-Frame Turntables**

- Three servo-motor control
  - All axes can turn simultaneously while indexing
  - Operator can jog station axis while robot welds
- Ergonomic loading and programming heights
- MotoMount fixture mounting system for quick change and longer life
- Arc screen for flash protection and curved sides to block entry into workcell
- Integrated carbon brushes provide long life and high amperage (800 A) capacity required for multiple robots and pulsed welding

**Ferris Wheel Positioners**

- Most space-efficient, two-station positioner design for parts 3-5 meters long
- The RM2-755 positioner features a sealed drive that eliminates most maintenance needs while expanding the life of the positioner
- The RM2-1255 positioner incorporates an easy-to-fill automatic lubricating device on the heavy-duty drive
- Ergonomic load height and angle of fixture can be varied to ease part loading
- MotoMount fixture mounting system for quick change and longer life
- Z-beam center support provides maximum clearance for fixture turning and overhead clearance on operator side for hoist access
- Three servo-motor control
  - All axes can turn simultaneously while indexing
  - Operator can jog station axis while robot welds
- Integrated high amperage (1,200/1,600 A) weld ground brushes
- Hollow tailstocks and optional slip rings with DeviceNet or Ethernet cabling and air for automated fixturing

Positioners

The patented MotoMount fixture mounting system is designed to increase positioner life and improve weld repeatability while reducing implementation costs. MotoMount allows for simplified tooling using lower-precision mounting holes, while making fixture changeover faster and easier. By reducing stress and wear on positioner bearings, tooling repeatability is improved by up to 75% and part warping from load stress is eliminated.

Built to Work in Harmony

The YRC1000 controller allows multiple positioner stations to be easily programmed and coordinated with robot motion. Standard software functions include Parallel Start, Coordinated Motion, Twin Synchronous (multiple robots coordinated with station axis) and Master Tool Frame. Positioners are easily calibrated to the robot, and support software weaving and seam-tracking on rotating workpieces. Functional Safety Unit (FSU) provides integrated control-reliable safeguarding from positioner axes motion during part loading operations.
Headstocks / Tailstocks

- Available as individual headstocks with rated payload, or combined with MotoMount for over twice the rated payload as headstock/tailstock
- MH units can be mounted at an angle or flat to create a rotary table
- Integrated high-amperage weld ground capacity for pulse welding and multiple robots
- Optional FSU is recommended to block motion on axes that are being loaded by operators
- Optional slip rings with DeviceNet communication and air are available for tailstock mounting

Multi-Axis | Tilt-Rotate | Skyhook | Drop Center

Not all production parts fit nicely into a standard workcell. Heavy, long, boxy or tubular parts can be handled by matching the application need with the proper part positioner. And when the application calls for a unique welding setup, Yaskawa Motoman’s wide range of positioners provide added flexibility that enables welding in the optimum position. Coordinated motion between the positioner and robot provide increased travel speeds while maintaining the highest weld standards. Representative designs are shown.
Transporters

Moving Down the Line

Moving the robot greatly increases the working range and application flexibility. Yaskawa Motoman delivers this advantage through a range of versatile transporter configurations. Our MotoSweep™ radial gantry is ideal for freeing up floorspace and allows the robot to be suspended directly over or on either side of a part. MotoRail™ linear transporters can be floor-mounted or suspended to reduce floorspace and can extend long distances. YRC1000 software can coordinate the motion of up to three base axes (X, Y, Z) for each robot with part positioners. It can also support multiple robots on transporter axes, along with part positioner(s), in a single workcell.
MotoSweep | MotoSweep HD
- Supports ceiling- or wall-mounted robot to reach large parts or parts that require deep access into weld joints
- Rotating base is covered and not exposed to weld spatter like floor tracks
- Radial motion is coordinated with linear motion of robot and rotating motion of part positioner(s)
- Heavy-duty version can support a robot with 200-kg payload capacity or robot with 3-m reach on a long boom
- Optional bulk wire delivery packages for welding applications

MotoRail 7
- Suspended track with ceiling- or wall-mount robot(s) provides open floorspace underneath to accommodate loading of large parts
- Six-axis robot mounted on seventh-axis rail provides additional range of motion and improves cycle time
- Available with wide range of robots including heavy-payload robots

Floor Tracks
- Wide variety of payload capacities and travel speeds available
- Robot motion coordinated with linear travel and part positioner(s)
- Options include multiple carriages on a single track, or larger carriages to carry robot controller or process equipment

Gantry & HD Drive Modules
Heavy-duty turning unit used in the MotoSweep HD can be integrated with heavy-fixture positioning solutions, creating a low-profile solution with the torque and load capacity to move very large pieces.

A gantry solution features a robot mounted on a moving overhead track. This expands the robot’s range to reach very large parts. Yaskawa Motoman’s gantry solutions incorporate coordinated motion control across all axes, resulting in a uniquely flexible, variable length solution.
Investing in a Brighter Future

Where Education and Industry Meet

Together with the educator community and our YMEC partners, we are creating new and better workforce models and STEM (Science, Technology, Engineering and Mathematics) educational opportunities to support job creation, advance scientific discovery, enhance manufacturing capabilities and drive economic growth.

Our hardware and software products and certification programs align industry needs with academic requirements.

Leaving a Legacy

In a time of rapid industry growth, enabling sustainable workforce development and providing competitive career pathways for students are both vital and challenging. Yaskawa Motoman is committed to addressing these critical needs with innovative products, curriculum, training certification and services for education and industry.

Yaskawa Motoman Education Consortium
**YASKAWA**

**ACADEMY**

---

## Hardware

**STEM Robotics Platform**
- Designed for education and training programs in advanced manufacturing and robotics
- Ideal for classrooms, labs and training centers
- Teach robotics with the same equipment used in factories
- Complete, modular packages with options for building custom platforms to fit curriculum and room layout
- Industrial-grade components and comprehensive academic tools
- Welding and material handling versions available

---

**MotoSim® Touch**
- PC-based off-line programming environment and robotics simulation tool
- Designed specifically for K-16 schools, training organizations and educational research institutions
- Simulates a fully functional production environment
- Provides ability for student to toggle between a virtual pendant or a hardware pendant
- Robot programs can be moved from the simulation environment to the classroom robot

---

## Software

**MotoSim**
- Comprehensive software enables accurate 3D simulation of robot cells
- Optimize robot and equipment placement with virtual testing
- Collision detection, reach modeling and cycle calculations
- Virtual display of actual programming pendant interface
- INFORM programming language, system configuration functions and condition file editing

---

**Yaskawa Academy Learning Management System (LMS)**
- Online training tool for skill-based robotics education
- Curriculum designed for classroom, lab, manufacturing training and industrial certification programs
- Accessible via standard browsers for secure, 24/7 access
- Equivalent to 30 hours of classroom experience
- Text, visuals and audio narration to support different learning styles

---

## Certification

**Yaskawa Academy offers two certification programs**
- **Train-the-Trainer** is designed for instructors of K-12 students, career tech and college undergraduates. This program provides the ability for schools to develop a student-based robotics certification course with focus on core robotics skills, or to expand an existing mechatronics robotics program.
- **MERIT (Motoman Endorsed Robotics Instructor Training)** is designed for instructors of educational institutions and to support workforce development certification with industry. This program enables instructors to deliver the same curriculum and instructional model as Yaskawa Academy to local manufacturers.
A Team Dedicated to Your Success

Yaskawa Motoman is dedicated to delivering high-quality, innovative automation solutions that help our customers to be competitive worldwide. Our goal is to provide the highest level of customer satisfaction in the automation industry.

Expert, Responsive Service

Technical Education Center
- Over 75 classes and IACET-accredited programs
- 13,400+ sq ft and 56 robots dedicated to training
- Hands-on training; 2:1 student-to-robot ratio

Customer Care Center
- One-call support; 24/7 coverage
- Web-based Customer Care Center (anywhere, anytime access to self-serve capabilities)

Field Services
- Regional and COE-based technicians
- Application-specific trained resources
- Included with installation and start-ups

Support Programs
- Robot Life Cycle Management (service and maintenance plans)
- RobotPro® software (maintenance, troubleshooting and documentation)
- Condition-based maintenance (diagnostics monitoring)
- Rebuilds, repairs and retrofits
Dedicated to Your Success

Yaskawa Motoman’s commitment to excellence extends beyond simply delivering exceptional products, user education and customer support. Our passion for providing high-quality, innovative automation solutions is rooted in our desire to help our customers be competitive leaders in their industries and markets. Driving customer success is at the core of every discipline within our company and spans the complete project lifecycle.

First, we thoroughly evaluate application needs to understand your unique requirements and challenges. This analysis drives the development of a configured solution specifically for your application. Next, we complete installation and training, with a strong focus on ensuring a positive on-boarding experience. The lifecycle continues with world-class support, post installation review and continuous improvement recommendations to sustain your cycle of success.

With Yaskawa Motoman, you can count on a committed partner with a proven track record of industry-leading innovations, including ArcWorld fully-integrated welding workcells, best-in-class arc and spot welding robots, and high-performance positioners. Whether you need standard products or a fully-customized solution, Yaskawa Motoman is the ideal partner to achieve your goals—and drive your long-term success.
