Upon receipt of the product and prior to initial operation, read these instructions thoroughly, and retain for future reference.

MOTOMAN INSTRUCTIONS

MOTOMAN-□□□ INSTRUCTIONS
DX200 INSTRUCTIONS
DX200 OPERATOR’S MANUAL
DX200 MAINTENANCE MANUAL

The DX200 Operator’s manual above corresponds to specific usage.
Be sure to use the appropriate manual.
This manual explains about the JANCD-YEW02-E board of the DX200 system. Read this manual carefully and be sure to understand its contents before handling the DX200.

General items related to safety are listed in the Chapter 1: Safety of the DX200 Instructions. To ensure correct and safe operation, carefully read the DX200 Instructions before reading this manual.

• Some drawings in this manual are shown with the protective covers or shields removed for clarity. Be sure all covers and shields are replaced before operating this product.

• The drawings and photos in this manual are representative examples and differences may exist between them and the delivered product.

• YASKAWA may modify this model without notice when necessary due to product improvements, modifications, or changes in specifications. If such modification is made, the manual number will also be revised.

• If your copy of the manual is damaged or lost, contact a YASKAWA representative to order a new copy. The representatives are listed on the back cover. Be sure to tell the representative the manual number listed on the front cover.

• YASKAWA is not responsible for incidents arising from unauthorized modification of its products. Unauthorized modification voids your product’s warranty.
NOTES FOR SAFE OPERATION

Read this manual carefully before installation, operation, maintenance, or inspection of the DX200.

In this manual, the Notes for Safe Operation are classified as “WARNING”, “CAUTION”, “MANDATORY”, or “PROHIBITED”.

- **WARNING**: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to personnel.
- **CAUTION**: Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury to personnel and damage to equipment. It may also be used to alert against unsafe practices.
- **MANDATORY**: Always be sure to follow explicitly the items listed under this heading.
- **PROHIBITED**: Must never be performed.

Even items described as “CAUTION” may result in a serious accident in some situations. At any rate, be sure to follow these important items.

To ensure safe and efficient operation at all times, be sure to follow all instructions, even if not designated as “CAUTION” and “WARNING”.
PROHIBITED

- Do not use or maintain this board under the following conditions:
  - Direct sunlight
  - Excessive vibration and shock
  - High humidity
  - Proximity to a strong magnetic field source
  - Excessive dust
  - Large temperature change
  - Corrosive gas
  - Condensation

Failure to observe this instruction may result in the failure of the board.
WARNING

• Before operating the manipulator, check that servo power is turned OFF when the emergency stop buttons on the front door of the DX200 and the programming pendant are pressed. When the servo power is turned OFF, the SERVO ON LED on the programming pendant is turned OFF.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency. The manipulator should not be used if the emergency stop buttons do not function.

Figure 1: Emergency Stop Button

• Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator. Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

Figure 2: Release of Emergency Stop

• Observe the following precautions when performing teaching operations within the P-point maximum envelope of the manipulator:
  – View the manipulator from the front whenever possible.
  – Always follow the predetermined operating procedure.
  – Keep in mind the emergency response measures against the manipulator’s unexpected motion toward you.
  – Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

• Confirm that no person is present in the P-point maximum envelope of the manipulator and that you are in a safe location before:
  – Turning ON the DX200 power
  – Moving the manipulator with the programming pendant
  – Running the system in the check mode
  – Performing automatic operations

Injury may result if anyone enters the P-point maximum envelope of the manipulator during operation. Always press an emergency stop button immediately if there is a problem. The emergency stop buttons are located on the right of the front door of the DX200 and the programming pendant.
WARNING

• Do not touch the inside of the controller cabinet for at least 5 minutes after turning the power off.
  Failure to observe this warning may result in electric shock or personal injury because of the residual voltage of the condenser.

• During power on, make sure to close the door and mount the protective cover, and do not touch the board.
  Failure to observe this warning may result in fire or electric shock.
<table>

### Definition of Terms Used Often in This Manual

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the controller, the programming pendant, and manipulator cables.

In this manual, the equipment is designated as follows:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DX200 Controller</td>
<td>DX200</td>
</tr>
<tr>
<td>DX200 Programming Pendant</td>
<td>Programming Pendant</td>
</tr>
<tr>
<td>Cable between the manipulator and the controller</td>
<td>Manipulator cable</td>
</tr>
</tbody>
</table>

Descriptions of the programming pendant keys, buttons, and displays are shown as follows:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Programming Pendant</td>
<td>Character Keys</td>
</tr>
<tr>
<td></td>
<td>Symbol Keys</td>
</tr>
<tr>
<td></td>
<td>The keys which have characters printed on them are denoted with [ ]. ex. [ENTER]</td>
</tr>
<tr>
<td></td>
<td>Axis Keys Numeric Keys</td>
</tr>
<tr>
<td></td>
<td>“Axis Keys” and “Numeric Keys” are generic names for the keys for axis operation and number input.</td>
</tr>
<tr>
<td></td>
<td>Keys pressed simultaneously</td>
</tr>
<tr>
<td></td>
<td>When two keys are to be pressed simultaneously, the keys are shown with a “+” sign between them, ex. [SHIFT]+[COORD]</td>
</tr>
<tr>
<td></td>
<td>Displays</td>
</tr>
<tr>
<td></td>
<td>The menu displayed in the programming pendant is denoted with { }. ex. {JOB}</td>
</tr>
</tbody>
</table>

### Description of the Operation Procedure

In the explanation of the operation procedure, the expression “Select • • •” means that the cursor is moved to the object item and the SELECT key is pressed.

### Registered Trademark

In this manual, names of companies, corporations, or products are trademarks, registered trademarks, or brand names for each company or corporation. The indications of (R) and ™ are omitted.

2.3 Analog Output Connector

Details of connector (view from the fitting surface of the cable connector)

Connector type: MR-34MG (soldering type) See Note 1.
MRP-34M01 (crimping type insulator) See Note 1.
MRP-M103 (crimping type contact, strip form terminal) See Note 2.
MRP-M113 (crimping type contact, loose piece terminal) See Note 2.
MR-34L+ (vertical type case)
All manufactured by Honda Tsushin Kogyo Co., Ltd.

Note 1: Use either MR-34MG or MRP-34M01.
Note 2: When using MRP-34M01, use either MRP-M103 or MRP-F113.
3 Function Settings

3.1 Description of Function Setting Switches

The names of the switches to set the functions of this board and how each switch works are shown below. Make sure to perform proper settings according to the following description. For details of the settings, refer to the next page.

- S1: Sets the station of this board on the DX200. The setting range of the station is 1 (ST#01) to D (ST#13). 0, E, or F cannot be set.

- SW1: Sets the transfer rate. Switches between 4 Mbps and 10 Mbps. Make sure to set SW1 to 4 Mbps. 10 Mbps cannot be used. If this board's information is not displayed on the programming pendant screen although the communication cable and power cable are connected correctly according to Section 5.1 “I/O Module Setting” on page 5-1, SW1 may be set to 10 Mbps. If so, change it to 4 Mbps.

- SW2: Sets the I/O communication mode. Switches between 17 BYTE or 32 BYTE. Make sure to set SW2 to 17 BYTE. 32 BYTE cannot be used. If this board's information is not displayed on the programming pendant screen although the communication cable and power cable are connected correctly according to Section 5.1 “I/O Module Setting” on page 5-1, SW2 may be set to 32 BYTE. If so, change it to 17 BYTE.
3 Function Settings
3.2 Switch Settings

Switch Settings

<table>
<thead>
<tr>
<th>Switch</th>
<th>How to set</th>
</tr>
</thead>
<tbody>
<tr>
<td>S1</td>
<td></td>
</tr>
</tbody>
</table>

**Station setting**

Sets the station.
The relations of the switch settings and the stations are shown below.
Set the arrow to the number corresponding to the desired station by using a precision screwdriver (Phillips or flathead).

0: Not available  
1: ST#01 (factory setting)  
2: ST#02  
3: ST#03  
4: ST#04  
5: ST#05  
6: ST#06  
7: ST#07  
8: ST#08  
9: ST#09  
A: ST#10  
B: ST#11  
C: ST#12  
D: ST#13  
E: Not available  
F: Not available

The number after ST# is the station number which is displayed on the programming pendant screen when setting the I/O module.

</tbody>
</table>
3  Function Settings
3.2  Switch Settings

• Do not set S1 to 0, E, or F. Also, do not set 2 or more boards to the same station. Otherwise, this board cannot be recognized correctly.

**NOTE**

• Do not set SW1 to 10 Mbps. If it is set to 10 Mbps, this board cannot be recognized correctly.

• Do not set SW2 to 32 BYTE. If it is set to 32 BYTE, this board cannot be recognized correctly.
4 Board Installation

**WARNING**

- Before wiring or installation, make sure to turn the primary power supply off, and put up a warning sign. (e.g. DO NOT TURN THE POWER ON.) Failure to observe this warning may result in electric shock or personal injury.
- Do not touch the inside of the controller cabinet for at least 5 minutes after turning the power off. Failure to observe this warning may result in electric shock or personal injury because of the residual voltage of the capacitors.
- During power on, make sure to close the door and mount the protective cover, and do not touch the board. Failure to observe this warning may result in fire or electric shock.
CAUTION

• Wiring and installation must be performed by authorized or certified personnel. Failure to observe this caution may result in fire or electric shock.

• Check to be sure that there is no foreign matter (metal piece, etc.) on the board. Failure to observe this caution may result in personal injury or equipment damage because of malfunction.

• Check to be sure that there is no problem (damage, bend, etc.) with the components of the board. Failure to observe this caution may result in personal injury or equipment damage because of malfunction.

• Connect the cables and connectors properly. Failure to observe this caution may result in fire or equipment failure.

• Make sure to properly perform the setting of the switches, etc. Failure to observe this caution may result in personal injury or equipment damage because of malfunction.

• Do not touch the component-mounting surface of the board directly with a finger. Failure to observe this caution may result in the failure of IC, etc. because of static electricity.

• Do not touch the solder surface of the board directly with a finger. Failure to observe this caution may result in personal injury because of solder projection, etc.

• Avoid shock on the board. Failure to observe this caution may result in the failure of the board.
4.1 Opening the Front Door of DX200

Install the JANCD-YEW02-E board according to the following procedure:

1. By using a coin or a flathead screwdriver, rotate the door locks on the front of the DX200 (two places) 90 degrees clockwise.

![Door lock diagram]

2. Rotate the main power supply switch to the “OFF” position and open the door gently.

![Power supply switch diagram]

4.2 Checking the Switch Setting of JANCD-YEW02-E Board

1. Check to be sure that the settings of the switches on the JANCD-YEW02-E board are correct.

2. For the switch setting, refer to Chapter 3 Function Settings on page 3-1.

4.3 Installing JANCD-YEW02-E Board to DX200

1. Check to be sure that the main power supply is turned off.

2. Securely fix the JANCD-YEW02-E board to the DX200 by tightening the board fixing screws firmly.
4.4 Connecting Cables

1. Connect the 24 VDC power cable to CN324 of the JANCD-YEW02-E board.

2. Connect the I/O communication cable to CN320 of the JANCD-YEW02-E board.
   Connect the terminal connector which is connected to CN114 of the JZNCD-YIF01-2E board to the unoccupied side of CN320 of the JANCD-YEW02-E board.

3. Connect the analog output cable to CN322 of the JANCD-YEW02-E board.
4.5 Closing the Front Door of DX200

1. Close the door gently.
2. By using a coin or a flathead screwdriver, rotate the door locks on the front of the DX200 (two places) 90 degrees counterclockwise.
5 I/O Signal Allocation

5.1 I/O Module Setting

To use the JANCD-YEW02-E board on the DX200, the I/O module must be set according to the following procedure.

Check to be sure that the power supply of the DX200 is turned OFF. Then, install the JANCD-YEW02-E board all of whose switches are properly set to the inside of the DX200 cabinet. When installing the board, refer to Chapter 4 Board Installation on page 4-1.

When setting the I/O module, set the security mode to the management mode.

When the security mode is set either to the operation mode or the editing mode, only the setting status can be referred to.

1. Press and hold [MAIN MENU], and turn on the power.
   – The main menu is displayed.

2. Select the {SYSTEM} under the main menu.
5 I/O Signal Allocation
5.1 I/O Module Setting

3. Set the security mode to the management mode.
4. Select {SETUP}.

5. Select {IO MODULE}.
   – The current installation status of I/O modules is displayed as shown below.
   – Press [ENTER] to display the other stations.
6. Check the installation status of I/O modules.
   - Only the currently installed I/O modules are shown. Check that the details of each station (ST#) are the same as the installation status of I/O modules.
   - The meanings of the columns are as follows:

<table>
<thead>
<tr>
<th>ST#</th>
<th>Station number of I/O module</th>
</tr>
</thead>
<tbody>
<tr>
<td>DI</td>
<td>Number of contact inputs 1)</td>
</tr>
<tr>
<td>DO</td>
<td>Number of contact outputs 1)</td>
</tr>
<tr>
<td>AI</td>
<td>Number of analog inputs 1)</td>
</tr>
<tr>
<td>AO</td>
<td>Number of analog outputs 1)</td>
</tr>
<tr>
<td>BOARD</td>
<td>Board type 2)</td>
</tr>
</tbody>
</table>

1 If “-” is displayed, the corresponding input or output is not implemented.
2 If the board type cannot be determined, “*****” is displayed in the BOARD column. Even so, there is no problem as long as the values of DI, DO, AI, and AO are normal.

- The following combination of boards is displayed in this example.
  - ST#00: JANCD-YI021-E board
    This board is shown as YSF21 on the IO module display.
    (Digital input 40 points, digital output 40 points)
    This board is fixed to ST#00.

  - ST#01: JANCD-YE02-E board
    (16 contact inputs, 16 contact outputs, 3 analog outputs)
    Note that even though 16 contact inputs and 16 contact outputs are displayed, they cannot be used for external devices because they are used by the system.
    Switch S1: Set to 1. (This value is the value of ST#.)
5 I/O Signal Allocation
5.1 I/O Module Setting

7. Press {ENTER}.
   – A confirmation dialog box appears.

8. Select {YES}.
   – When the mounted status of an I/O module is correct, select “YES.”
     The I/O module setting is updated, and the IO MODULE window
     changes to the EXTERNAL IO SETUP window.

   **NOTE**
   If the displayed details of each station (ST#) and the installation status of I/O modules are different, check the settings of cables and switches again. The following causes are possible:

   1. Wrong I/O communication setting
      The setting of SW1 or SW2 of the JANCD-YEW02-E board may be wrong. If so, the board cannot be determined correctly.

   2. Wrong station setting
      S1 may be set to 0, E, or F (not available). Also, only one optional board can be set to one station. Change the setting of S1 so that two or more boards are not set to one station.

   3. Wrong connection of the 24 VDC power cable or the I/O communication cable
      The 24 VDC power cable or the I/O communication cable may not be connected correctly. If the 24 VDC power cable is not connected to CN324 correctly, the power cannot be supplied properly. Check the connection of cables according to Chapter 4 Board Installation on page 4-1.

   4. Failure of I/O module
      If the displayed details and the installation status are still different even after the correction above, failure of the I/O module is possible. Contact your Yaskawa representative.
5. I/O Signal Allocation
5.1 I/O Module Setting

9. The EXTERNAL IO SETUP window appears.

10. Select {AUTO} or {MANUAL} in the ALLOCATION MODE.
    - The selection menu appears after selecting {AUTO} or {MANUAL}.

If the allocation mode is changed from {MANUAL} to {AUTO}, the set allocation data is discarded. The data will be allocated by AUTO MODE again. Save the set allocation data to the external devices in advance, if needed.

NOTE
11. Select the allocation mode to set up.
   - Select {AUTO} to allocate I/O signal allocation automatically. Select {MANUAL} to allocate I/O signal allocation manually.
   - The selected allocation mode is set up.

12. Select {DETAIL} of {EXTERNAL IO ALLOCATION}.
   - When select {AUTO}, the following procedures No.13 to 15 are not necessary. Operate the procedure from No.16.
   - When select {MANUAL}, operate the following procedures No.13 to 15 accordant with the setting manually.

The IO allocation of the XEW board and the YEW board cannot be changed even if select the {MANUAL} in the allocation mode.

The error [ERROR 8230: Cannot change the setting for XEW or YEW board.] occurs if attempt to change.
13. Select the external I/O signal number (at the change source) to be changed.
   – The select menu appears.
   – Select the {INIT} when add the YEW board to the system, which has already allocated the external I/O allocation manually.

```
<table>
<thead>
<tr>
<th>ST#</th>
<th>CH</th>
<th>MAC ID</th>
<th>ADDR</th>
<th>BYTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>#20010</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>4</td>
<td>0</td>
<td>254</td>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>4</td>
<td>0</td>
<td>0</td>
<td>1</td>
<td>6</td>
</tr>
</tbody>
</table>
```

14. Select {MODIFY}, and input the external input signal number (at the change destination) to be changed. (In the setting example, enter “#20190”.)
   – The external input signal number is changed.

15. Likewise, select/modify the number of the external input signal.
   – Repeat select/modify until it becomes the desired allocation to set up.

16. Press {ENTER}.
   – The allocation window of the external output signal appears.

17. Select/modify the number of the external output signal same as the external input signal.
   – Repeat select/modify until it becomes the desired allocation to set up.
5 I/O Signal Allocation
5.1 I/O Module Setting

18. Press \{ENTER\}.
   – Confirmation dialog appears.

19. Select \{YES\}.
   – The settings are confirmed, and returns to the SETUP window.

To add a board when using the YEW board

The XEW board and the YEW board (It is called EW board below) do not support external I/O allocation function.

As for the external I/O allocation setting to add a optional board in the system using the EW board, please refer to the following flow chart.
5-1 I/O Module Setting

Add a board

The external I/O allocation is set as manual.

- Automatic allocation
- Manual allocation

Add a board other than EW board.

- Add the EW board
- Add the board other than the EW board

Set the allocation for the added board at the following windows.
- EXTERNAL IO ALLOCATION (INPUT) window
- EXTERNAL IO ALLOCATION (OUTPUT) window

Initialize the board at the EXTERNAL IO ALLOCATION (INPUT) window.
After the initialization, set the adding board again manually, and then set the allocation.

Press ENTER.
Select YES in the confirmation dialog to save the setting.

The added board is automatically allocated.
5 I/O Signal Allocation

5.2 I/O Module

Data transferred from the JANCD-YEW02-E board to the DX200 are 16 contact inputs, 16 contact outputs, and 3 analog outputs (12 bit each). The I/O data of the JANCD-YEW02-E board are allocated to the external I/O signals of the concurrent I/O signals.

When only the JANCD-YEW02-E board is installed as an optional board, the concurrent I/O of the board are allocated as shown below:

<table>
<thead>
<tr>
<th>Contact input</th>
<th>Contact output</th>
</tr>
</thead>
<tbody>
<tr>
<td>25110 to 25117: System reservation</td>
<td>35110 to 35117: System reservation</td>
</tr>
<tr>
<td>25120 to 25127: System reservation</td>
<td>35120 to 35127: System reservation</td>
</tr>
</tbody>
</table>

**Analog output**

- M560: Channel 1
- M561: Channel 2
- M562: Channel 3

The relationship between the write contents and the output voltage values of the registers M560 to M562 are shown below.

Although the register setting value is 16-bit wide, the lower 4 bits of the write content are invalid because the D/A resolution is 12 bit. (The output voltage values of the write contents ***0H to ***FH are the same.) Also, the write contents 8000H to 800FH are not used.
5 I/O Signal Allocation
5.2 I/O Module

The allocation of the concurrent I/O is shown above, but note that only the 3 analog outputs can be used for communication between the JANCD-YEW02-E board and external devices.
The contact inputs and outputs are used by the system, so they cannot be used for communications with external devices.
6 Analog Output Circuit

6.1 Output Circuit

Three output circuits (channel 1 to 3) are available.

- When connecting a load to the analog output circuit, the load resistance must be 2 kΩ or more. If the load resistance is less than 2 kΩ, abnormal output voltage or damage to the output circuit may result.
- The analog output becomes undefined when the DX200 is turned on or off. Use an external circuit so that there is no problem even if the analog output becomes undefined.
- Use shielded twisted-pair wires (24 to 28 AWG) for the analog output wiring, and make the wiring length as short as possible.

| Number of channels and application | 3 channels for voltage output |
| Output range                     | -14 V to +14 V               |
| Digital resolution               | 12 bit                       |
| LSB value                        | Approx. 5 mV (0.0049 V)      |
| D/A output voltage error         | ±14 V, equal to or less than ±1% |
| Linearity error                  | Equal to or less than ±0.2%  |
| Forward and reverse error        | Equal to or less than ±1%    |
| Ripple voltage                   | Equal to or less than ±0.1 V |
| Temperature drift                | Equal to or less than ±1850 PPM/°C |
| For 0 V, equal to or less than ±20.5 mV (3 LSB) |
| Conversion cycle                 | Every communication cycle    |
| Conversion time                  | Approx. 7 ms (including communication time) |
| External load resistance         | Equal to or more than 2 kΩ  |

**Fig. 6-1: Example connection**

In the board

CH+  
CH+_G  
Load (R = 2 kΩ)  
0 V (Analog ground)
6.2 Example Connection

Note that indicates a shielded twisted-pair wire.
