Upon receipt of the product and prior to initial operation, read these instructions thoroughly, and retain for future reference.

MOTOMAN INSTRUCTIONS

MOTOMAN-□□□ INSTRUCTIONS
DX200 INSTRUCTIONS
DX200 OPERATOR’S MANUAL (for each purpose)
DX200 MAINTENANCE MANUAL

The DX200 operator’s manual above corresponds to specific usage. Be sure to use the appropriate manual.

Part Number: 167669-1CD
Revision: 0
MANDATORY

- This manual explains the brake release unit of the DX200 system. Read this manual carefully and be sure to understand its contents before handling the DX200.
- General items related to safety are listed in the Chapter 1: Safety of the DX200 Instructions. To ensure correct and safe operation, carefully read the DX200 Instructions before reading this manual.

CAUTION

- Some drawings in this manual are shown with the protective covers or shields removed for clarity. Be sure all covers and shields are replaced before operating this product.
- The drawings and photos in this manual are representative examples and differences may exist between them and the delivered product.
- YASKAWA may modify this model without notice when necessary due to product improvements, modifications, or changes in specifications. If such modification is made, the manual number will also be revised.
- If your copy of the manual is damaged or lost, contact a YASKAWA representative to order a new copy. The representatives are listed on the back cover. Be sure to tell the representative the manual number listed on the front cover.
- YASKAWA is not responsible for incidents arising from unauthorized modification of its products. Unauthorized modification voids your product’s warranty.
NOTES FOR SAFE OPERATION

Read this manual carefully before installation, operation, maintenance, or inspection of the DX200.

In this manual, the Notes for Safe Operation are classified as “WARNING”, “CAUTION”, “MANDATORY”, or “PROHIBITED”.

**WARNING**
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury to personnel.

**CAUTION**
Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury to personnel and damage to equipment. It may also be used to alert against unsafe practices.

**MANDATORY**
Always be sure to follow explicitly the items listed under this heading.

**PROHIBITED**
Must never be performed.

Even items described as “CAUTION” may result in a serious accident in some situations. At any rate, be sure to follow these important items.

To ensure safe and efficient operation at all times, be sure to follow all instructions, even if not designated as “CAUTION” and “WARNING”.

WARNING

• Confirm that no person is present in the P-point maximum envelope of the manipulator and that you are in a safe location before:
  - Turning ON the DX200 power
  - Moving the manipulator with the programming pendant
  - Running the system in the check mode
  - Performing automatic operations

Injury may result if anyone enters the P-point maximum envelope of the manipulator during operation. Always press an emergency stop button immediately if there are problems. The emergency stop buttons are located on the right of the front door of the DX200 and the programming pendant.

• Observe the following precautions when performing teaching operations within the P-point maximum envelope of the manipulator:
  - View the manipulator from the front whenever possible.
  - Always follow the predetermined operating procedure.
  - Ensure that you have a safe place to retreat in case of emergency.

Improper or unintended manipulator operation may result in injury.

• Before operating the manipulator, check that servo power is turned OFF when the emergency stop buttons on the front door of the DX200 and programming pendant are pressed. When the servo power is turned OFF, the SERVO ON LED on the programming pendant is turned OFF.

Injury or damage to machinery may result if the emergency stop circuit cannot stop the manipulator during an emergency. The manipulator should not be used if the emergency stop buttons do not function.

Figure 1: Emergency Stop Button

• Once the emergency stop button is released, clear the cell of all items which could interfere with the operation of the manipulator. Then turn the servo power ON.

Injury may result from unintentional or unexpected manipulator motion.

Definition of Terms Used Often in This Manual

The MOTOMAN is the YASKAWA industrial robot product.

The MOTOMAN usually consists of the manipulator, the controller, the programming pendant, and manipulator cables.

In this manual, the equipment is designated as follows:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DX200 Controller</td>
<td>DX200</td>
</tr>
<tr>
<td>DX200 Programming Pendant</td>
<td>Programming Pendant</td>
</tr>
<tr>
<td>Cable between the manipulator and the controller</td>
<td>Manipulator cable</td>
</tr>
</tbody>
</table>
Descriptions of the programming pendant keys, buttons, and displays are shown as follows:

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Manual Designation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Programming Pendant</td>
<td></td>
</tr>
<tr>
<td>Character Keys</td>
<td>The keys which have characters printed on them are denoted with [ ].</td>
</tr>
<tr>
<td>Symbol Keys</td>
<td>ex. [ENTER]</td>
</tr>
<tr>
<td>Axis Keys</td>
<td>“Axis Keys” and “Number Keys” are generic names for the keys for axis operation and number input.</td>
</tr>
<tr>
<td>Number Keys</td>
<td></td>
</tr>
<tr>
<td>Keys pressed simultaneously</td>
<td>When two keys are to be pressed simultaneously, the keys are shown with a “+” sign between them, ex. [SHIFT]+[COORD]</td>
</tr>
<tr>
<td>Displays</td>
<td>The menu displayed in the programming pendant is denoted with { }.</td>
</tr>
<tr>
<td></td>
<td>ex. {JOB}</td>
</tr>
</tbody>
</table>

Description of the Operation Procedure

In the explanation of the operation procedure, the expression “Select • • •” means that the cursor is moved to the object item and the SELECT key is pressed.

Registered Trademark

In this manual, names of companies, corporations, or products are trademarks, registered trademarks, or brand names for each company or corporation. The indications of (R) and TM are omitted.
# Table of Contents

1  Introduction ..................................................................................................................................... 1-1

2  Installation and Wiring.................................................................................................................... 2-1
   2.1  Installation ........................................................................................................................... 2-1
   2.2  Wiring..................................................................................................................................... 2-2

3  Operating Procedure........................................................................................................................ 3-1
1 Introduction

With the brake release unit, the motor brake can be forcibly released by using the manual switch even if the manipulator or external axis cannot be operated.

*Fig. 1-1: Brake Release Unit Installed in the Controller Cabinet*
2 Installation and Wiring

2.1 Installation

Fix the brake release unit on the inside surface of the door. (See Fig. 2-1 "Example of the Place to Fix the Brake Release Unit"). Note that the place to fix it may differ depending on the specification.

If the brake release unit is already installed in the controller cabinet, this procedure is not needed.

![CAUTION]

- Check to be sure that the main breaker of the DX200 is turned OFF before installing the brake release unit.

Electric shock or equipment damage may result.

- Make sure to fix the brake release unit.

Equipment damage or personal injury may result due to the falling of the unit.

Fig. 2-1: Example of the Place to Fix the Brake Release Unit
2.2 Wiring

Connect the cable to the connector CN401 of the brake control board (JANCD-YBK21-3E). The cable connector of the brake release unit should be fixed at the lower part of the brake release unit. (See Fig. 2-2 “Wiring Between the Brake Release Unit and the Brake Control Board”.)

If the brake release unit is already installed and wired in the controller cabinet, this procedure is not needed.

**CAUTION**

- Check to be sure that the main breaker of the DX200 is turned OFF before wiring the brake release unit. Electric shock or equipment damage may result.
- Make sure to fix the brake release unit in the controller cabinet before wiring it. Equipment damage, cable disconnection, or personal injury may result due to the falling of the unit.
- Do not connect the connector CN410 of the brake release unit and the cable when not used. Personal injury may result due to the wrong operation.

*Fig. 2-2: Wiring Between the Brake Release Unit and the Brake Control Board*
3 Operating Procedure

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| • When releasing the brake, pay attention to surroundings. The robot arm may move under its own weight, and personal injury or equipment damage may result.  
• Release the brake for one axis at a time. If the brakes of multiple axes are released out of necessity, the robot arm may move in an unexpected way. Pay attention to surroundings. Personal injury or equipment damage may result.  
• Confirm the cable is disconnected with the connector CN410 of the brake release unit after the operation. Personal injury may result due to the wrong operation if the cable and the connector CN410 remain connected. |

1. Connect the cable fixed at the lower part of the brake release unit to the connector CN410.  
2. Turn ON the breaker.  
3. Move the ENABLE switch of the brake release unit down. (Power lights “1-6” and “7-9” light up.)  
4. While the ENABLE switch is moved down, move an axis selection switch up. The brake of the axis is released while the axis selection switch is pressed.  
5. Turn OFF the breaker, disconnect the cable with the connector CN410 and then fix it again at the lower part of the brake release unit after the operation.  
6. To remove the brake release unit after the operation, turn OFF the breaker, then remove the brake release unit in the reverse order of the procedure described in Chapter 2 "Installation and Wiring".
